List of Figures	xvii
List of Tables	xx
Notation	xxi
1 Introduction	1
1.1 Adaptive Control using Neural Networks - Why and Why Now ?	1
1.2 Historical Perspective	2
1.3 Objective and Contributions of this Monograph	8
1.4 Outline of this Monograph	9
2 Network Structures and Learning Algorithms	11
2.1 Introduction	11
2.2 Basic Units	13
2.2.1 Activation function	14
2.3 Network Topology	15
2.3.1 Feedforward neural network	16
2.3.2 Recurrent neural network	17
2.3.3 Single layer and multilayer neural networks	18
2.4 Supervised Learning	20
2.4.1 Early learning algorithms	20
2.4.2 First order gradient methods	22
2.4.3 Second order gradient methods	29
2.4.4 LRLS and IGLS algorithms	33
2.4.5 Chemotaxis algorithm	33

2.4.6	History-stack learning	33
2.4.7	Alopex algorithm	34
2.5	Reinforcement Learning	35
2.5.1	Linear reward-penalty learning	36
2.5.2	Associative search learning	36
2.5.3	Adaptive critic learning	37
2.6	Unsupervised Learning	37
2.6.1	Hebbian learning	37
2.6.2	Boltzmann machines learning	39
2.6.3	Kohonen self-organising learning	39
2.7	Conclusions	40
3	Neural Networks Control Strategies	43
3.1	Introduction	43
3.2	Twofold Classifications	46
3.3	Non-hybrid Strategy - Control Signal	49
3.3.1	Mimic human expert	49
3.3.2	Mimic conventional controller	49
3.3.3	Indirect learning architecture	51
3.4	Non-hybrid Strategy - Desired Output Signal	52
3.4.1	Direct inverse control	52
3.4.2	Forward modelling and inverse control	54
3.4.3	Neural internal model control	58
3.4.4	Neural feedback linearisation	59
3.4.5	Neural predictive control	62
3.5	Hybrid Strategy - Control Signal	63
3.5.1	Indirect learning architecture	63
3.6	Hybrid Strategy - Desired Output Signal	64
3.6.1	Direct inverse control	64
3.6.2	Forward modelling and inverse control	67
3.6.3	Neural feedback linearisation	69
3.7	Hybrid Strategy - Feedback Controller Output Signal	70
3.7.1	Feedback error learning	70
3.8	Applications	72
3.9	Conclusions	76
4	On-line BPM and LRLS Control Algorithms	79
4.1	Introduction	79
4.2	On-line Adaptive Control using MLP Trained by BPM Algorithm	81

4.2.1	Plant Jacobian	82
4.2.2	Summary of the on-line BPM control algorithm	85
4.2.3	Simulation results	86
4.3	On-line Adaptive Control using LRLS Algorithm	89
4.3.1	Updating by RLS algorithm	89
4.3.2	Comparison of BPM, DBD, MABP, LM and LRLS algorithms	94
4.4	Real-time Application on Coupled Tanks Test Rig	97
4.4.1	SISO coupled tanks apparatus	97
4.4.2	Real-time results for the SISO coupled tanks	100
4.5	Conclusions	100
5	Local Convergence and Stability Analysis	103
5.1	Introduction	103
5.2	Analysis of the On-line BPM Control Algorithm	105
5.2.1	Convergence of the model	106
5.2.2	Convergence of the NN controller	111
5.3	Analysis of the On-line LRLS Control Algorithm	113
5.4	LRLS and BPM Algorithms	119
5.5	Simulation Results	121
5.6	Conclusions	124
6	On-line IGLS Control Algorithm	127
6.1	Introduction	127
6.2	The New Learning Algorithm	127
6.2.1	Summary of the IGLS control algorithm	129
6.2.2	Reasons for using an integrated gradient and least squares algorithm	130
6.3	Convergence and Stability Conditions	131
6.4	Simulation Results	132
6.5	Application to Multivariable Coupled Tanks Test Rig	135
6.5.1	Multivariable coupled tanks apparatus	135
6.5.2	Real-time control results	136
6.6	Conclusions	137
7	Systems with Unknown and Varying Time-delays	139
7.1	Introduction	139
7.2	NN, Self-tuning Pole Assignment and PID Controllers	140
7.2.1	Self-tuning pole assignment controller	140
7.2.2	PID controller	141
7.3	Simulation Results	142

7.3.1	Performance of the controllers	143
7.3.2	Effect of different numbers of hidden units	143
7.3.3	MIMO system with varying time-delays	144
7.4	Comparison of Controllers in Real-time Experiments	145
7.4.1	Heat transfer process trainer	146
7.4.2	Experimental procedures and results	147
7.5	Discussion and Analysis of the Controllers	152
7.6	Conclusions	158
8	Conclusions	159
8.1	Summary	159
8.2	Directions for Future Research	161
	Appendix	163
A.1	What does Approximation Theory Say?	163
A.2	Proof of Theorem 6.1	165
