

Excerpts	ix
Introduction	1
<b>CHAPTER I</b> The Conservation of Energy	7
<i>Julius Robert Mayer</i>	7
<b>Conservation Laws</b>	9
<b>Gravitational Energy</b>	11
A Demonstration with an Inclined Plane	12
The Rule for Measuring Gravitational Energy	16
A Mental Experiment	20
The Role of Mathematics in Science	22
<b>Kinetic Energy</b>	24
Energy of Motion	24
The Rule for Measuring Kinetic Energy	25
Systems with Only Kinetic Energy	31
<b>Units of Length, Mass, Weight, and Energy</b>	33
<b>Conservation Laws and Human Freedom</b>	35
<b>Heat Energy</b>	37
Friction and a New Form of Energy	37
The Nature of Heat	38
Measuring Heat: Temperature	42
Units of Heat	44

Heat and the Conservation of Energy	46
Heat, Work, and the First Law of Thermodynamics	51
The Conservation of Energy and the Limited Lifetime of the World	54
Reactions to Possible Violations of the Conservation of Energy	55
<b>CHAPTER II The Second Law of Thermodynamics</b>	59
<i>William Thomson</i>	59
Reversible and Irreversible Phenomena	62
States of a System and Probability of Configurations	64
An Introduction to Probability Theory	64
A Pendulum in Air: A Simple Model	67
Evolution to More Probable Configurations	72
Behavior of Realistic Systems with Large Numbers of Molecules and Number of Available States	76
A Pendulum in Air: A Realistic Model	79
The Direction of Time	82
Mechanical Energy and Heat	82
The Irreversible Flow of Heat	84
Doing Work with Heat	88
The Limited Ability to Do Work with Heat and the Universal Decrease of Usable Energy	88
The Efficiency of Machines	91
Entropy and Order	98
Entropy	98
Order	100
Resistance to the Implications of the Second Law	104
The Second Law Applied to Human Society	109
The Second Law Used to Refute the Theory of Evolution	114
<b>CHAPTER III The Relativity of Time</b>	117
<i>Albert Einstein</i>	117
Relativity in Brief	121
Science Leading to the Theory of Relativity	123
The Relativity of Mechanics	123
The Relativity of Electricity and Magnetism	124
The Discovery of Light as an Electromagnetic Phenomenon	127
The Michelson-Morley Experiment	130

<b>The Theory of Relativity</b>	135
Einstein's Postulates	135
Consequences of Einstein's Postulates: The Strange Law for Combining Speeds	138
Consequences of Einstein's Postulates: The Banishment of Absolute Simultaneity	142
Quantitative Derivation of Time Dilation	145
Experimental Tests of Time Dilation: The Disintegration of the Muon	156
Length Contraction	159
Mass-Energy Relation $E_0 = mc^2$	163
Meaning of the Speed of Light	166
<b>Abolition of Absolute Space and Time</b>	166
Aristotle's View of Space and Motion	167
Newton's View of Space and Time	167
Kant's View of Space and Time	168
<b>Einstein's Approach to Science</b>	169
Scientific Postulates as "Free Inventions" of the Human Mind	169
Deductive versus Inductive Thinking and the Influence of Hume on Einstein	171
<b>The Influence of the Theory of Relativity on Literature</b>	173
<b>Relativity and Sculpture</b>	175
<b>CHAPTER IV The Wave-Particle Duality of Nature</b>	179
<i>Werner Heisenberg</i>	179
<b>Waves</b>	182
Definition of a Wave	182
Properties of Waves: Wavelength, Frequency, Speed, and Amplitude	183
Interference of Waves	185
Nonlocality of Waves	186
Light as a Wave	187
<b>The Photoelectric Effect</b>	188
The Nature of the Electron	188
Discovery of the Photoelectric Effect	189
Einstein's Photon Theory of Light	192
Verification of the Photon Nature of Light	194
<b>The Double-Slit Experiment</b>	196
Description of the Experiment	196
Experimental Confirmation of the Double-Slit Experiment for Electrons	200

<b>The Role of the Observer and the Nature of Reality</b>	<b>201</b>
The Split Between Observer and Observed in Prequantum Physics	201
Interpretations of the Wave-Particle Duality of Nature	201
Berkeley's Views on External Reality	203
<b>Quantum Physics and Language</b>	<b>207</b>
<b>The Heisenberg Uncertainty Principle and the Demise of</b>	
<b>Determinism in Science</b>	<b>207</b>
Determinism in Prequantum Physics	208
The Basic Idea of the Principle	210
Spreading Out of Light as a Wave	211
Spreading Out of Light as a Particle: Components of Velocity and	
Momentum	221
The de Broglie Relation	225
The Heisenberg Uncertainty Principle	227
Quantum Mechanics	236
<b>Determinism, Causality, and Choice in the Quantum World</b>	<b>236</b>
Einstein's View of Quantum Mechanics	237
Causality	237
Determinism, Free Will, and Ethics	238
<b>APPENDIX A A Review of Some Basic Mathematics</b>	<b>241</b>
<b>Numbers and Scientific Notation</b>	<b>241</b>
Exponents	242
Equations	244
The Quadratic Formula	247
Geometry	248
<b>APPENDIX B Problems and Discussion Questions</b>	<b>253</b>
For Instructors and Students	253
Additional Problems	255
Discussion Questions	271
<b>APPENDIX C Laboratory</b>	<b>283</b>
 Readings	 285
Endnotes	289
Credits	295
Index	297
