

Table of Contents

Executive Summary	vi
Part A: Edge Plasma Physics in Confinement Experiments	
I. Introduction	A-1
II. Wall Conditioning	A-3
III. Impurity Control	A-4
IV. Limiter/Divertor	A-6
V. Edge Plasma Diagnostics	A-8
1. Present Implementation and Suggested Improvements	A-8
A. Probes	A-8
B. Microwave	A-9
C. Spectral	A-9
D. Photographic	A-10
2. New Diagnostics Required	A-10
3. Tritium Impact	A-11
VI. Auxiliary Components	A-12
VII. Vacuum Systems	A-18
VIII. Fueling	A-20
IX. Mirror Edge Plasma PMI Issues	A-22
1. Plasma-Wall Conditioning	A-22
2. Impurity Control	A-22
3. Edge Plasma - Limiter/Divertor	A-23
4. Auxiliary Components	A-24
5. Specific Issues for Machines Being Built Such as MFTF	A-25
6. Specific Issues for Reactors (MARS Design)	A-25

Table of Contents (Continued)

Table of Contents (Continued)

X. Alternative Fusion Concepts, Critical PMI Issues. . . . A-26

1. Introduction. A-26

2. Wall Conditioning A-28

3. Limiter/Divertor/Impurity Control A-29

4. Auxiliary Components (RF, NBI, etc.). A-31

5. Vacuum Systems. A-31

6. Fueling A-32

7. Plasma Equilibrium. A-32

8. Disruptions A-33

References A-35

Part B: Edge Plasma Physics Theory and Modelling

Introduction. B-1

I. The Edge Plasma B-1

1. Combined Edge-main Discharge Modeling B-4

A. Plasma flows. B-5

B. The Plasma-wall Boundary. B-8

2. Scrape Potentials B-11

A. Sheath Potential. B-11

B. Radial Potential. B-12

3. Ergodic Scrapeoffs. B-13

4. Data Needs. B-13

II. Hydrogen Recycling. B-14

1. Three-dimensional Diffusion B-14

2. Neutral-plasma Processes. B-15

3. Neutral-neutral Processes B-16

4. Wall Reflection Modeling B-17

5. First Wall Particle and Power Loadings. B-18

III. Impurity Transport. B-19

1. Wall Material Erosion and Redeposition. B-19

2. Molecular Production and Transport. B-21

IV. Pumping Systems B-22

V. Plasma Materials Interaction in Tandem Mirrors. B-24

Part C: Surface Physics

I. Introduction. C-1

II. Hydrogen Recycling Effects. C-2

1. Reflection. C-4

2. Athermal Desorption Processes C-7

3. Solid State Transport and Thermal Release C-9

III. Impurity Introduction C-12

1. Impurity Desorption C-13

2. Physical Sputtering C-16

3. Evaporation/Sublimation/Melting C-18

4. Disruption. C-22

5. Chemical Erosion. C-24

6. Arcing. C-27

7. Helium Trapping and Blistering. C-30

8. Redeposition. C-32

IV. Vacuum Issues and Special Components. C-34

1. Surface Conditioning. C-35

2. Gettering C-38

3. RF Heating. C-41

Table of Contents (Continued)

V. Summary.C-43

References.C-44

Part D: Materials Technology

1. Introduction and ScopeD-1

2. Materials Fabrication.D-4

 2.1 Heat-Sink Material.D-4

 2.2 Coatings and Armor MaterialD-6

3. 0-3 Years.D-11

4. 3-8 Years.D-13

 a) Alcator DCT.D-13

 b) TFCXD-14

 c) Doublet III - Big Dee.D-17

 d) Mirror DevicesD-18

 e) ZT-HD-18

5. Beyond 8 YearsD-19

 a) Interface Related Effects.D-19

 b) Neutron Effects.D-23

 c) Tritium Effects.D-25

 d) Electromagnetic InteractionsD-27

6. Summary and Conclusions.D-28
