

CONTENTS

Preface	v
Nomenclature	ix
Chapter 1. Wave Propagation in Circuits	1
1.1 Microwaves as Electromagnetic Radiation	1
1.2 Properties of Materials	2
1.2.1 Insulating dielectrics	2
1.2.2 Metallic conductors	3
1.2.3 Semiconductors	5
1.3 Waves with Purely Transverse Fields	6
1.3.1 Reflection and refraction at a boundary	6
1.3.2 Parallel-plate circuits	8
1.3.3 Coaxial lines	9
1.4 Waves in Hollow Conducting Tubes	11
1.4.1 Rectangular waveguides	11
1.4.2 Circular waveguides	16
1.5 Composite Waveguides	19
1.5.1 Miscellaneous cross sections	19
1.5.2 Ridged waveguides	21
1.5.3 Waveguides containing dielectric	27
1.6 Bibliography	30
Chapter 2. Practical Transmission Lines	39
2.1 Transmission-Line Theory	39
2.1.1 Impedance relations	39
2.1.2 Circle diagram	40
2.1.3 Broad-band matching	43
2.2 Operating Parameters	45
2.2.1 Frequency coverage	45
2.2.2 Attenuation	46
2.2.3 Power handling	48
2.3 Standard Waveguides	48
2.3.1 Rectangular guides	48
2.3.2 Circular guides	57
2.3.3 Wide-band and compact guides	57
2.4 Methods of Connection	62
2.4.1 Alignment of waveguides	62
2.4.2 Contact shims and chokes	64
2.4.3 Fitting and clamping arrangements	67

2.5 Sealing and Pressurizing	73
2.5.1 Waveguide systems	73
2.5.2 Connectors and joints	75
2.6 Simple Transitions	76
2.6.1 Bends, corners and twists	76
2.6.2 Adaptors and converters	79
2.7 Flexible Waveguides	81
2.7.1 Convoluted construction	81
2.7.2 Vertebral pattern	83
2.8 Bibliography	84
Chapter 3. Circuit Elements and Components	95
3.1 Circuit Elements	95
3.1.1 Obstacles	95
3.1.2 Coupling apertures	97
3.1.3 Shunt and series tees	99
3.2 Mode Transducers	101
3.2.1 Coaxial line to waveguide	101
3.2.2 Rectangular to circular waveguide	102
3.2.3 Plane to circular polarization	105
3.3 Directional Couplers	107
3.3.1 Intrinsic directional elements	107
3.3.2 Distributed coupling	110
3.3.3 Full-transfer designs	113
3.4 Hybrid Junctions	115
3.4.1 Phase-quadrature type	115
3.4.2 In-phase type	116
3.4.3 Miscellaneous hybrids	119
3.5 Variable Impedances	120
3.5.1 Devices using short-circuits	120
3.5.2 Movable inserts	122
3.5.3 Phase shifters	123
3.6 Motional Joints	126
3.6.1 Circular-magnetic-mode types	126
3.6.2 Miscellaneous types	128
3.7 Mechanical Switches	130
3.7.1 Manual operation	130
3.7.2 High-speed types	131
3.8 Bibliography	132
Chapter 4. Measuring Methods and Instruments	143
4.1 Measurement of Power	143
4.1.1 Principles and techniques	143
4.1.2 Conversion-to-heat methods	146
4.1.3 Hall effect and radiation pressure	152
4.2 Measurement of Attenuation	157
4.2.1 Geometric attenuators	157
4.2.2 Fixed attenuators and terminations	160
4.2.3 Variable attenuators	163

4.3 Measurement of Impedance	167
4.3.1 Network transformation	167
4.3.2 Standing-wave pattern	169
4.3.3 Bridge methods	174
4.4 Bibliography	177
Chapter 5. Resonant Cavities and Filter Circuits	193
5.1 Resonant Cavities	193
5.1.1 Modes and Q-factor	193
5.1.2 Circuit properties	198
5.1.3 Measurements on cavities	202
5.2 Measurement of Wavelength	206
5.2.1 Cavity wavemeters	206
5.2.2 Waveguide interferometers	209
5.3 Filter Circuits	210
5.3.1 Transmission lines	210
5.3.2 Coupled cavities	214
5.3.3 Quarter-wave coupling	219
5.4 Bibliography	220
Chapter 6. Measurements on and Properties of Materials	233
6.1 Principles and Methods	233
6.1.1 Types of materials	233
6.1.2 Free-space and transmission-line techniques	235
6.1.3 Resonant-cavity techniques	240
6.2 Experiments and Results	243
6.2.1 Gases	243
6.2.2 Liquids	247
6.2.3 Solids	252
6.3 Metallic Conduction	256
6.3.1 Normal conditions	256
6.3.2 Anomalous behaviour	259
6.3.3 Superconductivity	261
6.4 Bibliography	264
Chapter 7. Dielectric Spectrometry	280
7.1 Spectra of Gases	280
7.1.1 Molecular spectra	280
7.1.2 Line shape and intensity	283
7.1.3 Hyperfine structure	286
7.1.4 Stark and Zeeman effects	287
7.2 Spectrometers	291
7.2.1 Sensitivity	291
7.2.2 Gas containers	295
7.2.3 Typical spectrometers	299
7.3 Electron Magnetic Resonance in Solids	303
7.3.1 Characteristic energies	303
7.3.2 Measurement techniques	305
7.3.3 Typical materials	309
7.3.4 Relaxation times	312

7.1 Cyclotron Resonance	317
7.1.1 Circuit methods	317
7.1.2 Determination of carrier mass	319
7.5 Bibliography	321
Chapter 8. Properties and Applications of Gyromagnetic Media	344
8.1 General Behaviour of Gyromagnetic Media	344
8.1.1 Dispersion and absorption	344
8.1.2 Propagation in an infinite medium	347
8.2 Properties of Magnetic Materials	350
8.2.1 Types of ferrite	350
8.2.2 Ferromagnetic resonance	352
8.2.3 Nonlinear effects and instability	356
8.3 Propagation in Guided Systems	358
8.3.1 Circular waveguide	358
8.3.2 Rectangular waveguide	360
8.3.3 Ferrite devices as network elements	362
8.4 Measurements on Ferrite Materials	363
8.4.1 Practical parameters	363
8.4.2 Cavity methods	364
8.4.3 Waveguide methods	366
8.5 Resonance-Field Isolators	372
8.6 Low-Field Structures	375
8.6.1 Faraday-rotation devices	375
8.6.2 Transverse-field devices	380
8.6.3 Miscellaneous components	383
8.7 Bibliography	386
Chapter 9. Parallel-Plate Systems	407
9.1 General Properties	407
9.2 Double-Ground-Plane Lines	408
9.2.1 Dielectric sandwich	408
9.2.2 Air-spaced triplate	411
9.3 Single-Ground-Plane Lines	412
9.3.1 Air-spaced strip-above-ground	412
9.3.2 Microstrip	413
9.4 Elements and Components	415
9.4.1 Elements	415
9.4.2 Transducers	416
9.4.3 Components	418
9.5 Circuits and Systems	421
9.5.1 Measurement techniques	421
9.5.2 Circuit devices	421
9.5.3 Frequency filters	423
9.5.4 Antenna circuits	425
9.6 Materials and Manufacture	427
9.6.1 Materials and properties	427
9.6.2 Printing techniques	428
9.7 Bibliography	430

Chapter 10. Periodic and Guiding Structures	435
10.1 Waves in Periodically Loaded Lines	435
10.1.1 Dispersion	435
10.1.2 Space harmonics	440
10.1.3 Multiply-periodic loading	441
10.2 Dielectric-Clad Metal Structures	445
10.2.1 Plane waves over flat surfaces	445
10.2.2 Radial waves over flat surfaces	448
10.2.3 Axial cylindrical waves	449
10.3 Surface-Wave Circuits	451
10.3.1 Transverse corrugations	451
10.3.2 Effect of curvature	453
10.3.3 Launching and other devices	454
10.4 Waves on Dielectric Lines	457
10.4.1 Plane slabs	457
10.4.2 Cylindrical rods	459
10.4.3 Multiple media	461
10.4.4 Image lines	464
10.5 Coupled-Resonator Structures	465
10.5.1 Tape-ladder lines	465
10.5.2 Resonant cavities	470
10.6 Helical Structures	475
10.6.1 Simple helix	475
10.6.2 Practical modifications	477
10.7 Bibliography	481
Chapter 11. Grid-Controlled and Space-Charge-Wave Tubes	496
11.1 General Principles	496
11.1.1 Operating parameters	496
11.1.2 Grid-controlled tubes	498
11.2 Beam-and-Cavity Interaction	500
11.2.1 Space-charge waves	500
11.2.2 Amplifier klystrons	501
11.2.3 Reflex klystrons	504
11.3 Beam-and-Circuit Interaction	507
11.3.1 Growing-wave tubes	507
11.3.2 Travelling-wave tubes	510
11.3.3 Backward-wave tubes	514
11.4 Bibliography	518
Chapter 12. Crossed-Field Tubes and Ultramicrowave Generation	541
12.1 Interaction in Crossed Fields	541
12.1.1 Amplification	541
12.1.2 M-type carcinotrons	544
12.2 Magnetrons	545
12.2.1 Regimes of oscillation	545
12.2.2 Electrical circuit structures	547
12.2.3 Electron-and-circuit interaction	551
12.2.4 Practical data	553

12.3	Generation of Ultramicrowave Frequencies	555
12.3.1	Radiation from high-energy beams	555
12.3.2	Higher-frequency limit of coherent radiation	559
12.4	Electron Sources	561
12.4.1	Thermionic cathodes	561
12.4.2	Focused beams	562
12.5	Bibliography	564
Chapter 13.	Optical-Type Techniques	579
13.1	Radiation, Diffraction and Scattering	579
13.1.1	Radiation fields	579
13.1.2	Types of diffraction	586
13.1.3	Scattering	589
13.2	Artificial Dielectrics	592
13.2.1	Obstacle type	592
13.2.2	Constrained type	595
13.3	Control of Surface Reflection	598
13.3.1	Surface matching	598
13.3.2	Non-reflecting absorbers	601
13.3.3	Enhancement of reflectivity	604
13.4	Instruments and Devices	605
13.4.1	Spectrometers	605
13.4.2	Interferometers	607
13.4.3	Beam-dividing devices	611
13.5	Bibliography	615
Chapter 14.	Antenna Principles and Practice	630
14.1	Radiation Characteristics	630
14.1.1	General principles	630
14.1.2	Superdirective antennas	632
14.2	Broadside Antennas	633
14.2.1	Elementary radiators	633
14.2.2	Linear arrays	635
14.2.3	Two-dimensional arrays	637
14.3	End-Fire Antennas	638
14.3.1	Fast-wave systems	638
14.3.2	Slow-wave systems	640
14.3.3	Frequency-independent antennas	646
14.3.4	Surface radiators	647
14.4	Radiation from Apertures	648
14.4.1	Lenses	648
14.4.2	Electromagnetic horns	651
14.4.3	Reflecting surfaces	654
14.5	Scanning Systems	659
14.5.1	Beam movement	659
14.5.2	Phase-change methods	663
14.5.3	Wide-angle lenses	665
14.5.4	Wide-angle reflectors	668

14.6	Dielectric Radomes	670
14.6.1	Sandwich materials	670
14.6.2	Practical structures	672
14.7	Measurement Techniques	674
14.7.1	Phase contours	674
14.7.2	Radiation pattern	676
14.7.3	Power gain	677
14.8	Bibliography	678
Chapter 15.	Mechanical Design and Manufacture	706
15.1	Engineering Features	706
15.1.1	Design information	706
15.1.2	Dimensions and tolerances	707
15.2	Machining and Allied Processes	711
15.2.1	Precision machining	711
15.2.2	Pressing and hobbing	713
15.2.3	Spark machining	715
15.3	Methods of Fabrication	717
15.3.1	Soldering and brazing	717
15.3.2	Bending and twisting	718
15.4	Precision Casting	720
15.4.1	Permanent-pattern processes	720
15.4.2	Disposable-pattern casting	722
15.4.3	Permanent dies	725
15.5	Sintering and Spray Techniques	726
15.5.1	Powder metallurgy	726
15.5.2	Metal spraying	727
15.6	Electroforming	727
15.6.1	Plating techniques	727
15.6.2	Permanent formers	729
15.6.3	Disposable formers	731
15.6.4	Fabrication of electroformed pieces	732
15.7	Inspection and Measurement	733
15.7.1	Inspection methods	733
15.7.2	Mechanical dimensions	735
15.7.3	Surface texture	735
15.8	Protection and Packaging	738
15.8.1	Internal finishes	738
15.8.2	External finishes	739
15.8.3	Packaging and marking	740
15.9	Bibliography	741
Chapter 16.	Receivers	747
16.1	Reception of Threshold Signals	747
16.1.1	Types of receiver	747
16.1.2	Noise in circuits	750
16.1.3	Noise in electron beams	752
16.1.4	Noise in electron tubes	753

xxxviii	CONTENTS	
16.2	Semiconductor Diodes	755
16.2.1	Rectification	755
16.2.2	Low-level detection	758
16.2.3	Mixing parameters	760
16.2.4	Typical diodes and holders	764
16.3	Special Techniques	767
16.3.1	Associated circuits	767
16.3.2	Harmonic generation	769
16.4	Radiometer Techniques	773
16.4.1	Radiation energy and noise	773
16.4.2	Noise waveform	777
16.4.3	Gain fluctuations	778
16.4.4	Miscellaneous errors	782
16.5	Measurement of Performance	784
16.5.1	Signal generators	784
16.5.2	Dispersed-signal sources	785
16.5.3	Gas-discharge noise sources	788
16.5.4	Noise in electron-tube oscillators	791
16.6	Bibliography	794
Chapter 17.	Low-Noise Amplification	810
17.1	Steady-Power-Supply Methods	810
17.1.1	Electron tubes	810
17.1.2	Solid-state devices	813
17.2	Variable-Reactance Amplification	817
17.2.1	General principles	817
17.2.2	Negative-conductance type	819
17.2.3	Travelling-wave systems	822
17.3	Practical Parametric Amplifiers	825
17.3.1	Ferromagnetic materials	825
17.3.2	Space-charge waves	829
17.3.3	Semiconductor diodes	834
17.4	Quantum-Mechanical Amplifiers	839
17.4.1	Stimulated emission	839
17.4.2	Materials	843
17.5	Two-Level Masers	847
17.5.1	Nuclear-resonance techniques	847
17.5.2	Analysis in rotating coordinates	848
17.5.3	Practical devices	849
17.6	Multiple-Level Masers	852
17.6.1	Theory of operation	852
17.6.2	Cavity-type amplifiers	855
17.6.3	Travelling-wave amplifiers	861
17.7	Bibliography	863
Chapter 18.	Duplexers and Gaseous Electronics	889
18.1	Principles of Duplexing	889
18.1.1	Passive circuit	889
18.1.2	Solid-state switches	892
18.2	Gaseous Electronics	894
18.2.1	Breakdown processes	894
18.2.2	Properties of the discharge	896
18.2.3	Electron-removal processes	900
18.3	Characteristics of Duplexing Tubes	901
18.3.1	Circuit arrangement	901
18.3.2	Priming the discharge	903
18.3.3	Quenching the discharge	904
18.4	Externally Excited Tubes	905
18.4.1	Phase change	905
18.4.2	Gyromagnetic effects	907
18.4.3	Attenuators	909
18.4.4	Pulsed switches	909
18.5	Self-Excited Tubes	910
18.5.1	Single-function switches	910
18.5.2	Multiple-function switches	913
18.6	Discharge-Tube Duplexers	916
18.6.1	Branched guide	916
18.6.2	Balanced circuit	918
18.6.3	Individual function	920
18.7	Methods of Measurement	922
18.7.1	Attenuation and impedance	922
18.7.2	Leakage	922
18.7.3	Recovery time	924
18.8	Bibliography	925
Chapter 19.	Measurement and Stabilization of Frequency	938
19.1	Measurement of Frequency	938
19.1.1	Standards of time	938
19.1.2	Multiplier methods	939
19.2	Stabilization of Frequency	940
19.2.1	Reference cavities	940
19.2.2	Stabilizing circuits	944
19.3	Spectrum Analysis	949
19.3.1	Mechanical sweeping	949
19.3.2	Electronic sweeping	951
19.4	Spectral-Line Standards	953
19.4.1	Absorption techniques	953
19.4.2	Emission and beam techniques	955
19.4.3	Gravitation and relativity	960
19.5	Bibliography	961
Chapter 20.	Industrial, Biological and Medical Aspects of Radiation	973
20.1	Properties of Biological Materials	973
20.1.1	Dielectric behaviour	973
20.1.2	Electron-magnetic-resonance techniques	974

20.2 Industrial Heating Processes	976
20.2.1 Methods employed	976
20.2.2 Particular applications	977
20.3 Exposure to Intense Fields	980
20.3.1 Tissues with blood vessels	980
20.3.2 Tissues without blood vessels	981
20.4 Operational Hazards to Personnel	984
20.4.1 Exposure investigations	984
20.4.2 Instrumentation	986
20.4.3 Methods of protection	987
20.5 Bibliography	989
Chapter 21. Radio-Frequency Aspects of Electro-Nuclear Accelerators	995
21.1 Types of Accelerators	995
21.1.1 Particle electrodynamics	995
21.1.2 Low-frequency accelerators	997
21.2 Linear Accelerators using Cavities	998
21.2.1 Single cavity	998
21.2.2 Multiple cavities	1000
21.3 Travelling-Wave Linear Accelerators	1003
21.3.1 Use of slow-wave structures	1003
21.3.2 Miscellaneous techniques	1006
21.4 Constant-Field Orbital Accelerators	1008
21.4.1 Cyclotrons	1008
21.4.2 Synchro-cyclotrons	1010
21.4.3 Electron cyclotrons	1011
21.5 Induction-Type Orbital Accelerators	1012
21.5.1 Betatrons	1012
21.5.2 Electron synchrotrons	1014
21.5.3 Proton synchrotrons	1015
21.6 Alternative-Gradient Focusing	1017
21.7 Bibliography	1019
Chapter 22. Transmission-Line Communication	1029
22.1 Handling of Information	1029
22.1.1 Information theory	1029
22.1.2 Carrier modulation	1030
22.1.3 Storage systems	1033
22.2 Communication Techniques	1037
22.2.1 Circuit systems	1037
22.2.2 Requirements of line transmission	1039
22.3 Circular-Electric-Mode Waveguides	1040
22.3.1 Attenuation and dispersion	1040
22.3.2 Mode-conversion loss	1043
22.4 Practical Long-Distance Waveguides	1045
22.4.1 Transmission around bends	1045
22.4.2 Components and techniques	1049
22.5 Bibliography	1053

Chapter 23. Propagation of Radio Waves	1065
23.1 Propagation over the Earth	1065
23.1.1 Interference region	1065
23.1.2 Diffraction region	1067
23.1.3 Surface scatter	1068
23.2 Atmospheric Phenomena	1071
23.2.1 Refraction	1071
23.2.2 Attenuation	1074
23.2.3 Precipitation scatter	1078
23.3 Scatter Propagation	1079
23.3.1 Tropospheric scatter	1079
23.3.2 Auroral and meteoric ionization	1083
23.4 Bibliography	1086
Chapter 24. Radio-Relay Communication	1102
24.1 Terminal Equipment	1102
24.1.1 Circuit characteristics	1102
24.1.2 Components and electron tubes	1104
24.2 Operating Conditions	1106
24.2.1 Choice of propagation route	1106
24.2.2 Diversity operation	1108
24.3 Practical Systems	1110
24.3.1 Line-of-sight links	1110
24.3.2 Beyond-the-horizon links	1113
24.4 Space Communication	1115
24.4.1 Terrestrial relays	1115
24.4.2 Interplanetary relays	1119
24.5 Bibliography	1120
Chapter 25. Radar Systems	1135
25.1 Basic Principles	1135
25.1.1 Location of a scattering target	1135
25.1.2 Continuous-wave methods	1136
25.1.3 Pulse methods	1139
25.1.4 Signal detectability	1141
25.2 Equipment and Techniques	1142
25.2.1 Radio-frequency units	1142
25.2.2 Display and data handling	1145
25.2.3 Operation with clutter	1146
25.2.4 Test facilities	1148
25.3 Surveillance and Search	1151
25.3.1 Ground-based systems	1151
25.3.2 Marine navigation	1155
25.3.3 Secondary-radar systems	1158
25.4 Aeronautical Navigation	1160
25.4.1 Doppler aids	1160
25.4.2 Self-contained search devices	1162
25.4.3 Composite systems	1165

25.5	Approach and Landing Aids for Aircraft	1167
25.5.1	Approach systems	1167
25.5.2	Blind landing	1169
25.6	Surface Detection and Movement	1171
25.6.1	Field surveillance	1171
25.6.2	Velocity measurement	1173
25.7	Guidance and Control Systems	1174
25.7.1	Automatic tracking	1174
25.7.2	Launching control	1176
25.7.3	Missile guidance	1178
25.7.4	Long-range operation	1181
25.8	Bibliography	1182
Chapter 26.	Techniques of Radio and Radar Astronomy	1200
26.1	Practical Aspects	1200
26.1.1	General principles	1200
26.1.2	Receiving systems	1202
26.2	Radio Telescopes	1204
26.2.1	Single-lobe antennas	1204
26.2.2	Twin-wave interferometers	1207
26.2.3	Multiple interferometers	1211
26.2.4	Polarimeters	1214
26.3	Solar System	1216
26.3.1	Solar atmosphere	1216
26.3.2	Solar radiation	1218
26.3.3	Radiation from planets	1220
26.4	Cosmic Radio Waves	1222
26.4.1	Discrete noise sources	1222
26.4.2	Spectral lines	1224
26.5	Radar Astronomy	1227
26.6	Bibliography	1231
