

Contents of Volume 2

<i>Chapter 1</i>	
Electronic Structure and Spectra of Impurities in the More Ionic Crystals	1
Donald S. McClure	
1. Introduction	1
2. Incorporation of Impurities and Defects in Crystals	5
2.1. Solubility and Heat of Solution of Impurities in Crystals	6
2.2. Energies of Defect Formation	22
2.3. Equilibria among Electrons, Impurities, and Defects	25
3. Electronic States of Impurity Ions in Crystals	33
3.1. The Absorption and Emission of Radiation	34
3.2. Electronic Structure and Spectroscopy of the Transition Group Ions	47
3.3. Electronic Structure and Spectroscopy of Non-Transition Group Impurities	101
3.4. Electronic Structure and Spectroscopy of Ion Pair Systems	112
4. Conclusions	117
References	118

Chapter 2

The Imperfect Solid—Color Centers in Ionic Crystals 133
W. Beall Fowler

1. Introduction	133
1.1. General	133
1.2. Scope	134
1.3. Units and Definitions	134
2. Optical Properties—Perfect Crystals	135
2.1. The Spectrum	135
2.2. The Infrared Region	135
2.3. The Ultraviolet Region	136
3. Color Centers	139
3.1. Types of Centers	139
3.2. Color Center Creation	140
3.3. Theory of Electronic Structure and Optical Properties	142
3.4. Optical Properties—Results and Interpretation	152
3.5. Other Experimental Probes	164
3.6. Color Center Chemistry	168
4. Applications: Information Storage	170
Acknowledgments	172
References	172

Chapter 3

The Imperfect Solid—Dielectric Properties 183
G. E. Peterson

1. Introduction	183
2. Introduction to Ferroelectrics	184
2.1. Outline of Ferroelectric Theory	185
2.2. Statistical Theory of Lines	191
3. Pyroelectricity	197
3.1. Introduction	197
3.2. Pyroelectric Measurements	198
3.3. Effect of Stoichiometry in Strontium Barium Niobate	200
3.4. Depoling in Triglycine Sulfate	202
3.5. Transition Metal Doping Lithium Tantalate	205
3.6. Pyroelectric Polyvinylidene Fluoride Polymer	209
4. Nonlinear Optical Materials	212
4.1. Introduction	212
4.2. Techniques for Optical Homogeneity Determination	215
4.3. The Method of Parametric Fluorescence	217
4.4. Index Damage Measurements	219
4.5. Optical Homogeneity	220
4.6. Changing Phase-Match Temperature	226

4.7. Minimizing Optical Index Damage	229
References	234

Chapter 4

The Imperfect Solid—Transport Properties 237
David Adler

1. Introduction	237
1.1. Types of Disorder	237
1.2. Types of Bonding	239
2. Electronic Structure of Perfect and Imperfect Solids	240
2.1. Energy Band Theory of Solids	240
2.2. Effects of Imperfections in Nearly Perfect Crystals	245
2.3. Complete Long-Range Disorder	248
3. Transport Properties of Solids	249
3.1. Transport in Metals	250
3.2. Transport in Covalent Semiconductors	252
3.3. Transport Properties of Ionic Solids	255
3.4. Mott Insulators	256
3.5. Polarons and Hopping Conduction	262
3.6. Amorphous Semiconductors	267
4. Insulator–Metal Transitions	273
4.1. Band Overlap Transitions	273
4.2. Electronically Induced Phase Transformations	275
4.3. Mott Transitions	279
5. Experimental Results	282
5.1. Metal Oxides	282
5.2. Transition Metal Oxides	287
5.3. Rare Earth Oxides and Chalcogenides	307
5.4. Amorphous Semiconductors	311
5.5. Metals	316
Acknowledgments	321
References	321

Chapter 5

The Imperfect Solid—Semiconductors 333
Robert F. Brebrick

1. Imperfections in Crystalline Semiconductors	333
1.1. Electronic Energy States in the Perfect Crystal	333
1.2. Atomic Point Defects	335
1.3. Dislocations, Grain Boundaries, and Surfaces	343
1.4. Excitation Defects	346

2. Electron–Hole Equilibria	348
2.1. Conduction-Band Electrons and Valence-Band Holes	348
2.2. Donors and Acceptors	354
3. Electrical Properties	357
4. Optical Properties	362
4.1. Intrinsic Behavior	362
4.2. Influence of Atomic Point Defects	365
5. The Chemical Potentials in Elemental Semiconductors	369
5.1. Nonassociated Defects	369
5.2. Associated Defects	373
6. The Chemical Potentials for Binary Semiconductor Compounds	376
6.1. Thermodynamic Considerations	376
6.2. General Characteristics of the Model for a Semiconductor Compound	380
6.3. Chemical Potentials for a Binary Semiconductor Compound	382
6.4. Variations of the Basic Model	389
6.5. Refinements	390
References	392

Chapter 6

The Imperfect Solid—Magnetic Properties **395**

E. M. Gyorgy

1. Introduction	395
2. Intrinsic Properties	397
2.1. Saturation Magnetization	397
2.2. Exchange Constant	400
2.3. Anisotropy Constants	402
2.4. Magnetostrictive Constants	404
3. Effect of Impurities	405
3.1. Microwave Loss	405
3.2. Domain Wall Motion	413
3.3. Acoustic Loss	423
4. Structure-Sensitive Properties	427
4.1. Permeability	427
4.2. Coercive Force	438
4.3. <i>B–H</i> Loop	445
5. Lowered Symmetry	450
5.1. Field- and Growth-Induced Anisotropy	450
5.2. Photoinduced Anisotropy	455
5.3. Jahn–Teller Effect	456
Acknowledgments	460
References	460

Chapter 7

The Imperfect Solid—Mechanical Properties **469**

Eckhard Nembach

1. Introduction to Plasticity	469
2. Dislocations	473
3. Plastic Deformation of Pure Single Crystal by Slip	474
3.1. Plastic Deformation of FCC Crystals	478
3.2. Plastic Deformation of Hexagonal Crystals	486
3.3. Plastic Deformation of Crystals Having the Diamond Structure (DS)	487
3.4. Plastic Deformation of BCC Crystals	489
3.5. Plastic Deformation of Crystals Having the NaCl Structure	490
3.6. General Features of Stress–Strain Curves of Pure Single Crystals	491
4. Mechanical Twinning	491
5. Solid-Solution Hardening	493
5.1. Experimental Observations	493
5.2. Interaction Mechanisms between Dislocation and Solute Atoms	496
5.3. Interpretation of the Experiments on Solid-Solution Hardening	498
6. Hardening by Particles of a Second Phase	502
6.1. Cutting of Particles	502
6.2. Orowan Mechanism	505
7. Mechanical Properties of Polycrystals	506
7.1. Plastic Deformation of Polycrystals by Dislocation Mechanisms	506
7.2. Plastic Deformation of Polycrystals by Grain Boundary Sliding	508
8. Fracture	509
8.1. Fracture by Unidirectional Deformation	509
8.2. Fatigue Fracture	511
9. Anelasticity	511
9.1. Anelasticity Due to Point Defects	513
9.2. Anelasticity Due to Dislocations	513
Acknowledgments	514
References	514
