Chapter 1 Diffusion

# A. D. Le Claire

1.	Introduction	1
2.	The Phenomenology of Diffusion	2
	2.1. Fick's Laws	2
	2.2. Self-Diffusion and Chemical Diffusion. The Kirkendall	
	Effect	6
	2.3. Experimental Methods for Measuring Diffusion Co-	
	efficients	9
	2.4. The Thermodynamic Description of Diffusion	18
3. The Atomic Theory of Diffusion		26
	3.1. The Basic Random Walk Expressions	26
	3.2. Chemical Diffusion	28
	3.3. Self-Diffusion Correlation	30
	3.4. The Theory of Atomic Jump Rates	40
	3.5. The Temperature and Pressure Dependence of <i>D</i>	47
4.	Experimental and Theoretical Results. A Brief Summary	51
	4.1. Diffusion in Metals	51
	4.2. Diffusion in Ionic Crystals	54
	References	56

Gas-	-Solid Reactions—Oxidation Karl Hauffe	389
	Kan nauno	
1.	Introduction	389
2.	Chemisorption and Nucleation in the Initial Stage of Oxidation	391
3.	Defect Structure of Halides, Oxides, and Sulfides	394
	3.1. Defect Structure in Silver Halides	394
	3.2. Defect Structure in <i>p</i> -Type Oxides and Sulfides	396
	3.3. Defect Structure in <i>n</i> -Type Oxides and Sulfides	399
4.	General Nature of Transport Processes in Ionic Crystals	401
	4.1. Diffusion-Controlled Oxidation—The Parabolic Rate	
	Law	404
	4.2. Local Cell Action during Metal Oxidation	413
	4.3. Grain Boundary and Short-Circuit Diffusion in the	
	Growing Oxide Layer	417
	4.4. Metal Oxidation with Simultaneous Diffusion of Oxygen	
	in the Metal	417
5.	Phase Boundary Reactions and Evaporation of the Scale—The	
	Linear Rate Law	420
6.	Catastrophic Oxidation	425
7.	Oxide Layer Formation with Several Phases	428
8.	Oxidation of Alloys	430
	8.1. The Semiconductor Valence Approach to Alloy Oxidation	430
	8.2. Selective Oxidation of Noble Alloys	432
	8.3. Formation of Complex Oxide Layers	434

8.4. Internal Oxidation

9.	Passivity and Inhibition in High-Temperature Metal Oxidation	440
10.	Thin Oxide Layer Formation	442
	10.1. The Linear Rate Law	442
	10.2. A Cubic Rate Law.	443
	10.3. Space-Charge Effects in Oxide Growth-The Fourth-	
	Power Rate Law	445
	10.4. Logarithmic and Reciprocal Logarithmic Rate Laws	451
11.	Concluding Remarks	452
	References	453

#### Chapter 9 Metal-Liquid Reactions: Corrosion

ι.	Definitions of Corrosion
2.	Thermodynamic Considerations
5.	Kinetic Considerations
	Alloy Corrosion
	4.1. Dealloying
	4.2. Other Significant Alloying Effects
	Passivity
	5.1. Anodic Passivation
	5.2. Mechanism of Passivation
5.	Aggravating Factors in Corrosion
	6.1. Galvanic Corrosion
	6.2. Crevice Corrosion
	6.3. Concentration Cell Corrosion
	6.4. Erosion Corrosion
	6.5. Corrosion in the Presence of Cyclic Stresses
	Control of Corrosion
	7.1. Cathodic Protection
	7.2. Anodic Protection
	7.3. Inhibition
	7.4. Organic Coatings
	Morphology of Corrosion
	8.1. General Corrosion
	8.2. Pitting
).	Metallurgical Factors
	9.1. Introduction
	9.2. Orientation of Grains
	9.3. Effects of Dislocations and Cold Work
	9.4. Grain Boundaries
	9.5. Compositionally Different Phases

	6. Effect of Deformation on Corrosion Processes	524
	0.7. Tunneling	532
	.8. Interaction of Corrosion and Deformation Processes	534
	9.9. Interaction of Hydrogen with Metals	538
10.	ntergranular and Interfacial Corrosion	545
	0.1. Introduction	545
	0.2. Intergranular Corrosion in Sensitized Stainless Steel	552
	0.3. Exfoliation of Aluminum	554
	0.4. Intergranular Attach in the Absence of Precipitation	557
	0.5. Grain Boundary Fracture Simulated by Hydrogen Entry	558
11.	Environmentally Induced Cracking Phenomena	558
	1.1. Introduction	558
	1.2. Organization of the Data	564
	1.3. Fundamental Aspects of Environmental Effects on Crack	
	Propagation	585
	1.4. Phenomenological Influences on Stress Corrosion	
	Cracking	591
	Acknowledgments	610
	References	610

#### Chapter 10 Sintering

#### 

J. E. Burke and J. H. Rosolowski

1.	Intro	oduction	621
2.	Sinte	ring of Powdered Metals and Ceramics	622
3.	Phenomenological Description of Sintering in the Absence of a		
	Liqu	id Phase	623
	3.1.	Particle Joining	623
	3.2.	Sintering Temperature	624
4.	The	Driving Force for Sintering	625
	4.1.	The Kelvin Equation	625
	4.2.	Curvature in Three Dimensions.	627
	4.3.	Application to Particle Joining and Pore Elimination	627
	4.4.	Importance of Grain Boundary Energy	629
	4.5.	Powder Activity	631
5.	Grai	n Growth during Sintering	636
	5.1.	Particle Growth during the Early Stages of Sintering	637
	5.2.	Grain Boundary Motion in Solids	637
	5.3.	Interactions between Pores or Other Inclusions and Grain	
		Boundaries	639
	5.4.	Exaggerated Grain Growth	641
	5.5.	Pore-Free Products from Sintering	643

6.	Othe	r Sintering Modes	645
	6.1.	Liquid-Phase Sintering	645
	6.2.	Hot Pressing	646
	6.3.	Reaction Sintering.	647
7.	Theo	bry of Sintering	647
	7.1.	Driving Force and Mechanisms.	647
	7.2.	Common Characteristics of Sintering Models	649
	7.3.	Development of Microstructure	650
	7.4.	Sintering Stages	650
	7.5.	Initial-Stage Sintering Models	652
	7.6.	Intermediate-Stage Sintering Models	655
	7.7.	Final-Stage Sintering Models	657
8.	Sum	mary	658
	Ackr	nowledgment	658
	Refe	rences	658

# Chapter 11

<b>Reactions of Solid Polymers</b>	661
F. A. Bovey	

1.	Introduction		
	1.1.	The Chain Structure of Addition Polymers	661
	1.2.	Molecular Weight Distribution	665
	1.3.	Chain Conformation and Polymer Morphology	667
	1.4.	Types of Polymer Reactions	671
2.	Chai	n Scission and Cross-Linking; General	672
	2.1.	Effects of Chain Scission	672
	2.2.	Effects of Cross-Linking	673
	2.3.	Simultaneous Scission and Cross-Linking	675
3.	Degr	adation and Oxidation	677
	3.1.	Thermal Degradation	677
	3.2.	Oxidative Degradation	681
	3.3.	Ozone Degradation	687
	3.4.	Flammability	689
	3.5.	Chemical Degradation	693
4.	Cros	s-Linking	695
	4.1.	Cross-Linking and Mechanical Properties	695
	4.2.	Cross-Linking Reactions	698
5.	Effec	ts of Radiation	701
	5.1.	Ultraviolet Photooxidation	701
	5.2.	High-Energy Radiation	704
	5.3.	Photoresists and Electron-Resists	709

6.	Reactions under Mechanical Stress		
	References	711
