Contents

Chapter 1. **Introduction** 1
1.1. The Significance of Crystal Defects 1
1.2. The Nature of Crystal Defects 1

Chapter 2. **General Aspects of the Structure of Crystals** . . . 3
2.1. Outline 3
2.2. Mathematical Description of the Crystal 5
2.3. Classification of Crystal Structures 11

Chapter 3. **Some Special Crystal Structures** 13
3.1. Outline 13
3.2. Close-Packed Structures 13
3.3. The Face-Centred Cubic Structure 17
3.4. The NaCl-Structure. 19
3.5. The Diamond Structure 20
3.6. The Body-Centred Cubic Structure 22
3.7. The Close-Packed Hexagonal Structure 25
3.8. The Graphite Structure 27
3.9. Irregularities in the Stacking Sequence 28
3.10. Energy of Stacking Faults 33
3.11. Fibrous Structures 34
Chapters 2–3. Summary and Discussion 35

Chapter 4. **Point Defects** 37
4.1. General Considerations of the Field of Point Defects 37

Chapter 5. **The Individual Dislocation: Geometrical Basis** . . 41
5.1. Outline 41
5.2. Definition of the Dislocation Line and the Burgers Vector 41
5.3. Relative Orientation of $\boldsymbol{b}$ and $\boldsymbol{l}$ 45
5.4. Motion of Dislocations 47
5.5. Dislocations and Moiré-Figures 49

Chapter 6. **Interaction Between a Dislocation and its Surroundings** 51
6.1. Outline 51
6.2. Representation of the Stress Field 51

6.3. Forces Acting on a Dislocation 53
6.4. Energy of a Dislocation 55
6.5. The Line Tension 58
6.6. The Strain Field of a Dislocation 61
6.7. The Stress Field of a Dislocation 63
Chapters 5–6. Summary and Discussion 67

Chapter 7. **The Interaction of Dislocations** 70
7.1. Outline 70
7.2. Interaction Between two Parallel Screw Dislocations 70
7.3. Interaction Between two Parallel Edge Dislocations 71
7.4. Dislocation Reactions 72
7.5. Dislocation Reactions in Special Crystal Structures . 75

Chapter 8. **Partial Dislocations** 78
8.1. Outline 78
8.2. Partial Dislocations in the Face-Centred Cubic Structure 78
8.3. The Sequence of Partial Dislocations 81
8.4. Transformation of the Face-Centred Cubic — into the Close-Packed Hexagonal Structure 87

Chapter 9. **Dualistic Representation of Dislocation Reactions** 98
9.1. Introduction 98
9.2. The Significance of the *b*-Net 101
9.3. The Prediction of Dislocation Reactions 102
9.4. Dislocation Reactions Involving Partial Dislocations 107
9.5. Thompson's Notation of the Burgers Vectors. . . . 109
Chapters 7–9. Summary and Discussion 110

Chapter 10. **Short Description of the Relations Between Dislocations and Point Defects, and Dislocation Dynamics** 113
10.1. Dislocations and Point Defects 113
10.2. Dislocation Dynamics 117

Chapter 11. **Dislocation Networks — Subgrain Boundaries** . . 118
11.1. Introduction 118
11.2. Frank's Formula 119
11.3. Classification of Subgrain Boundaries 124
11.4. "Special" Subgrain Boundaries 125
11.5. Foreign Dislocations 129
11.6. "General" Subgrain Boundaries 130
11.7. The Energy of a Subgrain Boundary 131
11.8. Some Considerations of Recrystallization 133

11.9. Limiting Cases 138
11.10. Dualistic Representation in Three Dimensions. . . 139
Chapter 11. Summary and Discussion 141

Chapter 12. **General Geometrical Theory of Crystalline Interfaces** 143
12.1. Introduction 143
12.2. The Coincidence-Site Lattice 143
12.3. The O-Lattice. 148
12.4. The O-Lattice and Frank's Formula 153
12.5. The *b*-Lattice 154
12.6. Various Aspects of the O-Points 155
12.7. The Actual Formulation of the Transformation $\boldsymbol{A}$. 158
12.8. Choice Between Various Possible Transformations $\boldsymbol{A}$ 160
12.9. Solutions of the Basic Equation 169
12.10. The Behaviour of the O-Lattice upon Translation of Lattice 2 175
12.11. Translation of the O-Lattice for the Case of Rank $(\boldsymbol{T}) < 3$ 177
12.12. Subdivision of the Crystal Space into Cells 182
Chapter 12. Summary and Discussion 183

Chapter 13. **Applications of the O-Lattice Theory** 186
13.1. Outline 186
13.2. Example of an Optimum Phase Boundary 188
13.3. The Periodicity of the Pattern of Lattice Points . . 196
13.4. Displacement of the Pattern 206
13.5. Dislocation Networks in General Crystalline Interfaces 209

Chapter 14. **Completion of the Linear O-Lattice Theory and Extension to Non-Linear Problems** 215
14.1. Outline 215
14.2. Dislocations and Burgers Vectors in Crystalline Interfaces 215
14.3. Non-Linear Problems 221
Chapters 13–14. Summary and Discussion 226

Appendix 229
A 1 Matrix Calculation Procedures 229
A 2 Moiré-Models 243
A 3 The Direct Observation of Crystal Defects 245
