

# CONTENTS

	P a g e
<b>I. General Introduction</b>	<b>1</b>
<b>II. Collisional-Radiative Model For Lithium-like Ions</b>	<b>7</b>
II- I. INTRODUCTION	9
II- II. COLLISIONAL-RADIATIVE MODEL	10
II-III. ATOMIC PROCESSES	15
II-IV. CALCULATION RESULT AND POPULATION KINETICS	19
II- V. COMPARISON WITH EXPERIMENTS	27
II- VI. VALIDITY RANGE AND UNCERTAINTIES	30
APPENDIX	32
<b>III. Experimental Apparatus</b>	<b>77</b>
III- I. PLASMA SOURCE (WT-3 TOKAMAK)	79
III- II. VISIBLE-UV SPECTROMETER	80
III-III. XUV SPECTROMETER	81
<b>IV. <i>In Situ</i> Calibration of Xuv Spectrometer</b>	<b>95</b>
<b>(Measurement of Charge Exchange Recombination rate coefficients between Highly Charged Ions and Hydrogen Atoms or Molecules)</b>	
IV- I. INTRODUCTION	97
IV- II. EXPERIMENT	98
IV-III. COLLISIONAL-RADIATIVE MODEL	101
IV- IV. RESULT AND DISCUSSION	101
<b>V. Plasma Polarization Spectroscopy (PPS)</b>	<b>119</b>
V- I. INTRODUCTION	121
V- II. THEORY	122
V-III. EXPERIMENT	132
<b>VI. Observation of Polarization of the Soft X-ray Laser Line of Neon-Like Germanium Ions</b>	<b>153</b>
VI- I. INTRODUCTION	155
VI- II. EXPERIMENT	155
VI-III. DISCUSSION	158
