

## Table of Contents

Abstract	i
Acknowledgements	ii
Table of Contents	iii
List of Figures and Tables	v
Chapter I. INTRODUCTION	1
Chapter II. EXPERIMENTAL SETUP	20
2.1 REPUTE-1 device	20
2.2 Plasma diagnostics	23
2.2.1 magnetic measurements	
2.2.2 other diagnostics	
2.3 Insertable magnetic probe system	28
Chapter III. DEPENDENCE OF PLASMA PROPERTIES ON PINCH PARAMETER	32
3.1 Dependence of plasma properties on plasma current	32
3.2 Limit of plasma current for probe measurement	35
3.3 Current penetration and relaxation phenomena in setting up phase	36
3.4 Dependence of magnetic field structure on pinch parameter in sustainment phase	49
Chapter IV. LARGE AMPLITUDE OSCILLATION OF MAGNETIC FIELD IN HIGH PINCH PARAMETER REGIME	58
4.1 Characteristics of large amplitude oscillation	

of magnetic field	58
4.2 High frequency fluctuations of magnetic field and VUV signals	71
4.3 Oscillation of soft-Xray signal	80
Chapter V. DISCUSSION	88
5.1 Comparison with nonlinear resistive MHD theory	88
5.2 Comparison of low $\theta$ discharge with high $\theta$ discharge	93
Chapter VI. CONCLUSION	98
Appendix	
A Recent experimental results of RFP	101
B Parameter limit of plasma to use insertable probe	104
C Fitting function of magnetic field	109
References	113
