Contents

1 Introduction **5**

2 Principle of Plasma Rotation **8**

2.1 Single Particle Motion 8

2.2 Plasma Rotation 10

2.3 Magnetic Mirrors 12

3 Experimental Apparatus **15**

3.1 GAMMA10 15

3.2 Visible Spectroscopy for Plasma Diagnostics 18

3.3 UV-Visible TV Spectrometer Systems 21

3.3.1 Fiber Optics 21

3.3.2 Spectral Imaging and Intensifying System 22

3.3.3 Image Detecting and Processing System 23

3.3.4 Specification 24

3.4 Calibrations and Performances 25

3.4.1 General Calibration Technique 25

3.4.2 Relative Sensitivity of 40 Channel Fiber Optics 25

3.4.3 Wavelength and Dispersion 26

3.4.4 Line Curvature 26

3.4.5 Absolute Sensitivity of Spectrometer Systems 27

4 Data Analysis **41**

4.1 Doppler Effects 41

4.1.1 Doppler Shift 41
4.1.2 Doppler Broadening 41
4.1.3 Convolution 42
4.2 Analytical Procedures 43
4.2.1 Impurity Spectra 43
4.2.2 Parametric Abel Inversion Technique 43
4.2.3 Impurity Distribution Function 45
4.3 Numerical Simulation 47
4.3.1 Diamagnetic Drift 47
4.3.2 E×B Drift 48

5 Rotation in the Cylindrical Plasmas **54**
5.1 Rotation in torus Plasmas 54
5.2 E×B Rotation in the ECRH Plasmas
and Potential Distribution 57
5.3 Diamagnetic Rotation in ICRH Plasmas
and Impurity Distribution 59
5.4 Discussion on Plasma Rotation 62

6 Hot Ion Behavior
in Magnetic Confinement Plasmas **72**
6.1 Introduction 72
6.2 Impurity Spectra in Anchor Plasma 74
6.3 Dependence on ICRF Absorption 76
6.4 Doppler Shift and Time Evolution 78
6.5 Discussion 80

7 Conclusions **89**

Acknowledgements **92**

Bibliography **92**
