

## CONTENTS

Scope of Japanese Nuclear Science and Technology	Satoru Tanaka	1
The Status of R & D on the Spent Fuel Management in Korea	Myung Seung Yang	11
Innovative Materials R&D for High Burnup Next Generation Nuclear System	Akihiko Kimura	19
Korean Fusion Program Summary as of August, 2007	Jung Hoon Han	31
Helical Systems and Large Helical Device (LHD)	Akio Komori	39
Roadmap for High Performance Fuel in LWR in Japan	Tamotsu Murata	51
Fabrication and property evaluation of SiC composite	Ji Yeon Park	59
Present Status of the ITER Project and the BA (Broader Approach) Activities	Hideyuki Takatsu	63
Development of ITER Test Blanket and Divertor in JAEA	Mkio Enoda	73
System Analysis for a Fusion Reactor Development	Bong Guen Hong	81
Plasma Wall Interactions in Fusion Devices	Tomoaki Hino	89

Evaluation of Interface Strength between Metal and Ceramics to be Utilized for Materials Research and Development in Nuclear Energy System	Manabu Satou	95
Materials Research for Advanced Nuclear Energy Systems and Activities of the Division of Materials Science and Technology, AESJ	Toru Ogawa	103
Development of ODS Ferritic Steel Cladding for Na-Cooled fast Reactors	Tai Asayama and Shigeharu Ukai	111
Stress Corrosion Cracking Studies on Austenitic Stainless Steels in BWR	Yoshiyuki Nemoto	119
Irradiation Embrittlement of Reactor Pressure Vessel Steels	Koji Fukuya	129
Irradiation Creep Behavior of Vanadium Alloys under Liquid Metal Environment	Kenichi Fukumoto, Minoru Narui, Hideki Matsui, Takuya Nagasaka and Takeo Muroga	139
Research and Development of HTGR Fuel and Material	Kazuhiro Sawa	147
Corrosion and Hydrogen Absorption Property of Zirconium Alloys	Kazuo Kakiuchi	155
Fusion Energy Conversion and Liquid Breeder Blanket	Satoshi Konishi	161
Design and Plasma Performance Assessment of JT-60SA	Takaaki Fujita	169
Analysis of initial stage of defect structures in FCC metals irradiated with neutrons	Toshimasa Yoshiie	177

Microstructural characterization and in-situ experiment of advanced SiC/SiC composites and joining for fusion applications	Tamaki Shibayama	187
Mechanical properties of Monolithic SiC and SiC/SiC composite for Fusion Blanket materials	Han Ki Yoon	195
Radionuclide release from fuel under severe accident conditions	Tamotsu Kudo	203
Future Direction on Structural Monitoring – New Sizing Methodologies of Stress Corrosion Crack using Electromagnetic Nondestructive Evaluation	Fumio Kojima	211
Overview of Current Research on the Mechanism of Reactor Pressure Vessel Steels Embrittlement	Ryuta Kasada	219
Multiscale Modeling Approach to Radiation Effects on Materials	Junhyun Kwon	229
Small Punch Creep Test for Creep Property Measurement of High Cr Martensitic Steel	Shin-ichi Komazaki	237
Relationship between Mechanical Property and Microstructure in Irradiated Materials	Naoyuki Hashimoto	245
Overview of International Fusion Materials Irradiation Facility (IFMIF) PART I: Outline and Prospect	Hideki Matsui	255
Overview of International Fusion Materials Irradiation Facility (IFMIF) PART II: Design	Akihiko Shimizu	263

Surveillance Test Program and Assessment of Structural Integrity of Reactor Pressure Vessels	Tohru Tobita	271
Working Science at Power Generation Reactors - applying accelerator and computer to study high burnup fuel ceramics -	Motoyasu Kinoshita	283
Feasibility Study on Beryllium-Free He-Cooled Solid Breeder Fusion Blanket	Yonghee Kim	289
Behavior of Helium in Metals	Naoaki Yoshida	295
Recent Korean Research Activities on Tritium	Kun Jai Lee	303
