CONTENTS

1 LINEAR SPACES

Introduction	1
Linear Vector Spaces	2
Scalar Product in E_n and E_{∞}	4
Scalar Product in Abstract Spaces	6
Convergence and Complete Spaces	8
Linear Manifolds and Subspaces	10
Representation of Linear Vector Spaces	15
Orthogonalization	16
Projection Theorem and Linear Functionals	18
Linear Operators	22
Representation of Operators	25
Inversion of Operators	28
Inverting the Identity plus a Small Operator	34
Completely Continuous Operators	38
The Adjoint of an Operator	42
The Existence and Uniqueness of the Solution of $Lx = a$	45
Operators with Closed Range	49
APPENDIX I. The Projection Theorem	51
APPENDIX II. Operator of Closed Range plus a Dyad	53
2 SPECTRAL THEORY OF OPERATORS	
Introduction	57

viii	CONTENTS		CONTENTS	ix
Operators in General Spaces		125	Normalization of the Continuous Spectrum—Examples	241
Illustration—the Continuous Spectrum		128	Normalization of the Continuous Spectrum and Scattering	245
APPENDIX. Proof	of Theorem 2.11	131	Summary of Spectral Representations	249
			APPENDIX. Proof of Theorem 4.7	251
	3 GREEN'S FUNCTIONS			
Introduction		134	5 PARTIAL DIFFERENTIAL EQUATIONS	
The Identity Operator as an Integral Operator		134	Introduction	253
Interpretation of the δ-Function		136	Green's Functions for Partial Differential Operators	255
Testing Functions and Symbolic Functions		137	Separation of Variables	259
Derivatives of Symbolic Functions		139	The Inverse of the Sum of Two Commutative Operators	263
Symbolic Derivatives of Ordinary Functions		141	Alternative Representations	266
Examples of Symbolic Derivatives		142	Boundary Value Problems	268
The Inverse of a Differential Operator—Example		144	An Apparent Contradiction	271
The Domain of a	Linear Differential Operator	146	Changing One Representation into Another	273
The Adjoint Diffe	rential Operator, Hermitian Operators	148	Example—Changing One Representation into Another	274
Self-adjoint Second	d-Order Differential Operators	151	Spectral Representation for the Sum of Two Commutative Operators	277
Symbolic Operations		153	Example—The Inverse of a Sum of Three Commutative Operators	280
Green's Functions	and δ-Functions	156	The Spectral Representation for Partial Differential Operators	283
Example 1-Green	n's Function	158	A Physical Interpretation of the Continuous Spectrum	285
Example 2—Green	n's Function	160	δ-Functions in Different Coordinate Systems	290
Example 3—Green	n's Function	162	Initial-Value Problems	293
Green's Function	if Boundary Conditions Are Unmixed	164	The Green's Function for the Wave Equation	298
Non-homogeneous Boundary Conditions		167		
If the Homogeneo	us Equation Has a Non-trivial Solution	169	Bibliography	301
	for General Boundary Conditions	172	Index	303
	of the Adjoint Equation	173	Index	303
Discontinuity Con		174		
Wave Propagation	and Scattering	177		
	stence of a Solution for Equation (3.30)	187		
APPENDIX II. Sol	ution for Large Values of x	191		
4	EIGENVALUE PROBLEMS OF ORDINARY DIFFERENTIAL EQUATIONS			
Introduction		195		
Eigenfunction Ext	pansion-Example 1	196		
	pansion—Example 2	198		
	Eigenfunction Representations	199		
•	pansion—Example 3	203		
	pansion—Example 4	205
