<i>Preface</i>	<i>page xi</i>
PART I INTRODUCTION	1
1 The meaning of ‘probability’	3
1.1 Classical definition of ‘probability’	3
1.2 Statistical definition of ‘probability’	9
1.3 Bayesian understanding of ‘probability’	10
2 Basic definitions for frequentist statistics and Bayesian inference	15
2.1 Definition of mean, moments and marginal distribution	15
2.2 Worked example: The three-urn problem	24
2.3 Frequentist statistics versus Bayesian inference	28
3 Bayesian inference	33
3.1 Propositions	33
3.2 Selected examples	34
3.3 Ockham’s razor	43
4 Combinatorics	47
4.1 Preliminaries	47
4.2 Partitions, binomial and multinomial distributions	52
4.3 Occupation number problems	59
4.4 Geometric and hypergeometric distributions	62
4.5 The negative binomial distribution	66
5 Random walks	71
5.1 First return	71
5.2 First lead	75
5.3 Random walk with absorbing wall	80
6 Limit theorems	83
6.1 Stirling’s formula	83
6.2 de Moivre–Laplace theorem/local limit theorem	84
6.3 Bernoulli’s law of large numbers	86
6.4 Poisson’s law	87

7	Continuous distributions	92
7.1	Continuous propositions	92
7.2	Distribution function and probability density functions	93
7.3	Application in statistical physics	96
7.4	Definitions for continuous distributions	98
7.5	Common probability distributions	99
7.6	Order statistic	118
7.7	Transformation of random variables	121
7.8	Characteristic function	124
7.9	Error propagation	131
7.10	Helmert transformation	136
8	The central limit theorem	139
8.1	The theorem	139
8.2	Stable distributions	142
8.3	Proof of the central limit theorem	143
8.4	Markov chain Monte Carlo (MCMC)	144
8.5	The multivariate case	146
9	Poisson processes and waiting times	147
9.1	Stochastic processes	147
9.2	Three ways to generate Poisson points	150
9.3	Waiting time paradox	154
9.4	Order statistic of Poisson processes	156
9.5	Various examples	157
PART II	ASSIGNING PROBABILITIES	163
10	Prior probabilities by transformation invariance	165
10.1	Bertrand's paradox revisited	167
10.2	Prior for scale variables	169
10.3	The prior for a location variable	171
10.4	Hyperplane priors	171
10.5	The invariant Riemann measure (Jeffreys' prior)	176
11	Testable information and maximum entropy	178
11.1	Discrete case	178
11.2	Properties of the Shannon entropy	182
11.3	Maximum entropy for continuous distributions	194
12	Quantified maximum entropy	201
12.1	The entropic prior	201
12.2	Derivation of the entropic prior	202
12.3	Saddle-point approximation for the normalization	203
12.4	Posterior probability density	204

12.5	Regularization and good data	205
12.6	A technical trick	209
12.7	Application to ill-posed inversion problems	210
13	Global smoothness	215
13.1	A primer on cubic splines	216
13.2	Second derivative prior	219
13.3	First derivative prior	221
13.4	Fisher information prior	221
PART III	PARAMETER ESTIMATION	225
14	Bayesian parameter estimation	227
14.1	The estimation problem	227
14.2	Loss and risk function	227
14.3	Confidence intervals	231
14.4	Examples	231
15	Frequentist parameter estimation	236
15.1	Unbiased estimators	236
15.2	The maximum likelihood estimator	237
15.3	Examples	237
15.4	Stopping criteria for experiments	241
15.5	Is unbiasedness desirable at all?	245
15.6	Least-squares fitting	246
16	The Cramer–Rao inequality	248
16.1	Lower bound on the variance	248
16.2	Examples	249
16.3	Admissibility of the Cramer–Rao limit	251
PART IV	TESTING HYPOTHESES	253
17	The Bayesian way	255
17.1	Some illustrative examples	256
17.2	Independent measurements with Gaussian noise	262
18	The frequentist approach	276
18.1	Introduction	276
18.2	Neyman–Pearson lemma	281
19	Sampling distributions	284
19.1	Mean and median of i.i.d. random variables	284
19.2	Mean and variance of Gaussian samples	294
19.3	z -Statistic	297
19.4	Student's t -statistic	299
19.5	Fisher–Snedecor F -statistic	302

19.6	Chi-squared in case of missing parameters	305
19.7	Common hypothesis tests	308
20	Comparison of Bayesian and frequentist hypothesis tests	324
20.1	Prior knowledge is prior data	324
20.2	Dependence on the stopping criterion	325
PART V	REAL-WORLD APPLICATIONS	331
21	Regression	333
21.1	Linear regression	334
21.2	Models with nonlinear parameter dependence	350
21.3	Errors in all variables	353
22	Consistent inference on inconsistent data	364
22.1	Erroneously measured uncertainties	364
22.2	Combining incompatible measurements	380
23	Unrecognized signal contributions	396
23.1	The nuclear fission cross-section $^{239}\text{Pu}(n, f)$	396
23.2	Electron temperature in a tokamak edge plasma	399
23.3	Signal-background separation	403
24	Change point problems	409
24.1	The Bayesian change point problem	409
24.2	Change points in a binary image	415
24.3	Neural network modelling	420
24.4	Thin film growth detected by Auger analysis	427
25	Function estimation	431
25.1	Deriving trends from observations	432
25.2	Density estimation	439
26	Integral equations	451
26.1	Abel's integral equation	452
26.2	The Laplace transform	456
26.3	The Kramers-Kronig relations	459
26.4	Noisy kernels	463
26.5	Deconvolution	465
27	Model selection	470
27.1	Inelastic electron scattering	473
27.2	Signal-background separation	474
27.3	Spectral line broadening	478
27.4	Adaptive choice of pivots	481
27.5	Mass spectrometry	484

28	Bayesian experimental design	491
28.1	Overview of the Bayesian approach	491
28.2	Optimality criteria and utility functions	492
28.3	Examples	493
28.4	N -step-ahead designs	504
28.5	Experimental design: Perspective	504
PART VI	PROBABILISTIC NUMERICAL TECHNIQUES	507
29	Numerical integration	509
29.1	The deterministic approach	509
29.2	Monte Carlo integration	515
29.3	Beyond the Gaussian approximation	531
30	Monte Carlo methods	537
30.1	Simple sampling	537
30.2	Variance reduction	542
30.3	Markov chain Monte Carlo	544
30.4	Expectation value of the sample mean	555
30.5	Equilibration	560
30.6	Variance of the sample mean	561
30.7	Taming rugged PDFs by tempering	564
30.8	Evidence integral and partition function	568
31	Nested sampling	572
31.1	Motivation	572
31.2	The theory behind nested sampling	579
31.3	Application to the classical ideal gas	584
31.4	Statistical uncertainty	592
31.5	Concluding remarks	594
Appendix A	Mathematical compendium	595
Appendix B	Selected proofs and derivations	611
Appendix C	Symbols and notation	619
