|--|----|
| Preface | 13 |
| Chapter 1. Introduction to Inverse Problems in Imaging and Vision | 15 |
| Ali MOHAMMAD-DJAFARI | |
| 1.1. Inverse problems | 16 |
| 1.1.1. 1D signal case | 17 |
| 1.1.2. Convolution model for image restoration | 18 |
| 1.1.3. General linear model | 19 |
| 1.2. Specific vision problems | 21 |
| 1.2.1. Noise removal | 23 |
| 1.2.2. Segmentation | 23 |
| 1.2.3. Contour detection | 25 |
| 1.2.4. Restoration or reconstruction in vision | 26 |
| 1.3. Models for time-dependent quantities | 26 |
| 1.4. Inverse problems with multiple inputs and multiple outputs (MIMO) | 27 |
| 1.4.1. MIMO deconvolution | 28 |
| 1.4.2. Super-resolution | 29 |
| 1.4.3. Source separation | 30 |
| 1.5. Non-linear inverse problems | 30 |
| 1.5.1. Microwave imaging | 31 |
| 1.6. 3D reconstructions | 33 |
| 1.6.1. Reconstruction of the surface of a 3D object from its radiographs | 33 |
| 1.7. Inverse problems with multimodal observations | 33 |
| 1.7.1. Fusion of X-ray radiography and ultrasonic echography data | 34 |
| 1.8. Classification of inversion methods: analytical or algebraic | 34 |
| 1.8.1. Analytical inversion methods | 36 |
| 1.8.2. Analytical inversion methods in a dual space | 39 |
| 1.8.3. Discretization into pixels or voxels, and algebraic inversion | 40 |
| 1.9. Standard deterministic methods | 40 |

| | | | |
|--|----|--|-----|
| 1.9.1. Matched filter or back-projection solution | 41 | 2.3.4. Markovian quad-tree | 84 |
| 1.9.2. Inverse solution in the classical sense | 42 | 2.3.5. Missing or erroneous data | 87 |
| 1.9.3. Minimum-norm solution | 42 | 2.4. Bibliography | 88 |
| 1.9.4. Least-squares solution | 43 | | |
| 1.9.5. The regularized solution | 43 | | |
| 1.9.6. Finding an inverse operator | 43 | | |
| 1.10. Probabilistic methods | 44 | Chapter 3. Blind Image Deconvolution | 97 |
| 1.10.1. Bayesian estimation approach | 45 | Laure BLANC-FÉRAUD, Laurent MUGNIER and André JALOBEANU | |
| 1.11. Problems specific to vision | 50 | 3.1. Introduction | 97 |
| 1.12. Introduction to the various chapters of the book | 52 | 3.2. The blind deconvolution problem | 98 |
| 1.12.1. Noise removal and contour detection | 52 | 3.2.1. Ill-posed problem (multiple solutions) | 100 |
| 1.12.2. Blind image deconvolution | 52 | 3.2.2. Constraints and models for the point spread function | 101 |
| 1.12.3. Triplet Markov chains and image segmentation | 52 | 3.3. Joint estimation of the PSF and the object | 103 |
| 1.12.4. Detection and recognition of a collection of objects in a scene | 53 | 3.3.1. Joint maximum likelihood | 103 |
| 1.12.5. Apparent motion estimation and visual tracking | 53 | 3.3.2. Joint maximum <i>a posteriori</i> | 104 |
| 1.12.6. Super-resolution | 53 | 3.3.3. Total least squares | 106 |
| 1.12.7. Tomographic surface reconstruction | 53 | 3.4. Marginalized estimation of the impulse response | 107 |
| 1.12.8. Gauss-Markov-Potts prior for Bayesian inversion in microwave imaging | 54 | 3.4.1. Estimation using the expectation-maximization algorithm | 108 |
| 1.12.9. 3D reconstruction from shadows | 54 | 3.4.2. Algorithm example: BLINDE | 109 |
| 1.12.10. Image separation | 54 | 3.5. Various other approaches | 112 |
| 1.12.11. Stereo reconstruction from satellite or aerial photography | 55 | 3.5.1. Estimation for specific objects or with strong constraints on the image | 112 |
| 1.12.12. Fusion and multimodality | 55 | 3.5.2. Wavelet-domain estimation | 113 |
| 1.13. Bibliography | 55 | 3.5.3. Separation of “zero sheets” | 113 |
| Chapter 2. Noise Removal and Contour Detection | 59 | 3.5.4. ARMA modeling and identification | 113 |
| Pierre CHARBONNIER and Christophe COLLET | | 3.5.5. Estimation by recursive filtering | 114 |
| 2.1. Introduction | 61 | 3.6. Multi-image methods and phase diversity | 114 |
| 2.1.1. Boolean line process models | 62 | 3.7. Conclusion | 115 |
| 2.1.2. Half-quadratic regularization | 64 | 3.8. Bibliography | 116 |
| 2.1.3. Comments | 66 | | |
| 2.1.4. Constraints on the contour variables | 68 | | |
| 2.1.5. Regularization of intensity and region segmentation | 72 | | |
| 2.2. Statistical segmentation of noisy images | 72 | Chapter 4. Triplet Markov Chains and Image Segmentation | 123 |
| 2.2.1. Noise models | 73 | Wojciech PIECZYNSKI | |
| 2.2.2. Multiplicative noise in sonar and radar imagery | 73 | 4.1. Introduction | 124 |
| 2.2.3. Independent Gaussian noise | 76 | 4.2. Pairwise Markov chains (PMCs) | 127 |
| 2.2.4. Correlated Gaussian noise | 77 | 4.2.1. General model | 127 |
| 2.2.5. Generalized Gaussian noise | 77 | 4.2.2. Stationary Gaussian PMCs | 129 |
| 2.3. Multi-band multi-scale Markovian regularization | 79 | 4.3. Copulas in PMCs | 130 |
| 2.3.1. Bayesian inference | 80 | 4.3.1. Copulas | 130 |
| 2.3.2. Cost function | 80 | 4.3.2. Copulas in PMCs | 132 |
| 2.3.3. Hierarchical Markovian models | 81 | 4.4. Parameter estimation | 132 |
| | | 4.4.1. ICE in a parametric model | 133 |
| | | 4.4.2. ICE in a generalized mixture model with copulas | 135 |
| | | 4.5. Triplet Markov chains (TMCs) | 136 |
| | | 4.6. TMCs and non-stationarity | 139 |
| | | 4.7. Hidden Semi-Markov chains (HSMCs) and TMCs | 140 |

| | | | |
|---|-----|--|-----|
| 4.7.1. HSMCs as a special case of TMCs | 141 | Chapter 7. Super-resolution | 251 |
| 4.7.2. Extensions to HSMCs | 142 | Ali MOHAMMAD-DJAFARI and Fabrice HUMBLOT | |
| 4.8. Auxiliary multivariate chains | 144 | 7.1. Introduction | 251 |
| 4.9. Conclusions and outlook | 148 | 7.2. Modeling the direct problem | 252 |
| 4.10. Bibliography | 149 | 7.3. Classical SR methods | 257 |
| Chapter 5. Detection and Recognition of a Collection of Objects in a Scene | 155 | 7.4. SR inversion methods | 261 |
| Xavier DESCOMBES, Ian JERMYN and Josiane ZERUBIA | | 7.4.1. Methods based on an optimization criterion | 261 |
| 5.1. Introduction | 155 | 7.4.2. Joint estimation of the alignment, point spread function and HR | |
| 5.2. Stochastic approaches | 156 | image parameters | 264 |
| 5.2.1. Markov fields on graphs | 156 | 7.5. Methods based on a Bayesian approach | 265 |
| 5.2.2. Marked point processes | 159 | 7.5.1. <i>A priori</i> Gauss-Markov-Potts models | 265 |
| 5.3. Variational approaches | 167 | 7.5.2. Methods of Bayesian estimation using Gauss-Markov-Potts | |
| 5.3.1. Active contours | 169 | models | 269 |
| 5.3.2. Methods with a reference shape | 172 | 7.5.3. Novel extensions | 270 |
| 5.3.3. Higher-order active contours | 174 | 7.6. Simulation results | 271 |
| 5.3.4. Data term and experiments | 178 | 7.7. Conclusion | 272 |
| 5.3.5. Future outlook | 184 | 7.8. Bibliography | 274 |
| 5.4. Bibliography | 184 | Chapter 8. Surface Reconstruction from Tomography Data | 277 |
| Chapter 6. Apparent Motion Estimation and Visual Tracking | 191 | Charles SOUSSEN and Ali MOHAMMAD-DJAFARI | |
| Etienne MÉMIN and Patrick PÉREZ | | 8.1. Introduction | 277 |
| 6.1. Introduction: from motion estimation to visual tracking | 191 | 8.2. Reconstruction of localized objects | 280 |
| 6.2. Instantaneous estimation of apparent motion | 193 | 8.2.1. Modeling of radiographic images | 280 |
| 6.2.1. Photometric invariants and regularization | 193 | 8.2.2. Principles of surface reconstruction | 283 |
| 6.2.2. Parametric regularization | 196 | 8.3. Use of deformable contours for 3D reconstruction | 284 |
| 6.2.3. Non-parametric regularization | 201 | 8.3.1. Introduction | 284 |
| 6.2.4. Multi-resolution and large displacements | 203 | 8.3.2. Non-parametric contour models | 285 |
| 6.2.5. Robustification | 204 | 8.3.3. Simple parametric contour models | 287 |
| 6.2.6. Motion-based segmentation | 209 | 8.3.4. More general contour models: concept of locality | 289 |
| 6.2.7. Coupled estimation/segmentation: local-global segmentation . . . | 215 | 8.3.5. Indirect models | 292 |
| 6.2.8. Future directions | 217 | 8.4. Appropriate surface models and algorithmic considerations | 293 |
| 6.3. Visual tracking | 219 | 8.4.1. Choice of model | 293 |
| 6.3.1. Introduction | 219 | 8.4.2. Estimation of shape parameters | 293 |
| 6.3.2. Tracking through detection matching | 221 | 8.4.3. Calculating the projections of a contour | 294 |
| 6.3.3. Deterministic tracking by sequential detection/segmentation . . | 223 | 8.4.4. Differentiation of contour projections | 296 |
| 6.3.4. Probabilistic tracking | 228 | 8.4.5. Contour deformation | 297 |
| 6.3.5. Visual tracking using particle filtering | 235 | 8.4.6. Conclusion | 297 |
| 6.3.6. Open questions and future directions | 239 | 8.5. Reconstruction of a polyhedral active contour | 298 |
| 6.4. Conclusions | 240 | 8.5.1. Polyhedron model | 298 |
| 6.5. Bibliography | 241 | 8.5.2. Parameterization of the contour using its vertex locations . . | 300 |
| | | 8.5.3. Maximum <i>a posteriori</i> estimation of the vertices | 300 |
| | | 8.5.4. Numerical simulations | 301 |

| | | | |
|--|-----|---|-----|
| 8.6. Conclusion | 303 | 11.3.2. <i>A priori</i> selection | 388 |
| 8.7. Bibliography | 305 | 11.4. Stochastic algorithms | 390 |
| Chapter 9. Gauss-Markov-Potts Prior for Bayesian Inversion in | | 11.4.1. Stochastic approximations to expectation-maximization | 391 |
| Microwave Imaging | 309 | 11.4.2. Gibbs sampler | 392 |
| Olivier FÉRON, Bernard DUCHÈNE and Ali MOHAMMAD-DJAFARI | | 11.4.3. Convergence testing | 395 |
| 9.1. Introduction | 310 | 11.5. Simulation results | 398 |
| 9.2. Experimental configuration and modeling of the direct problem | 311 | 11.6. Conclusion | 401 |
| 9.2.1. The experimental configuration | 312 | 11.6.1. Separation performance | 401 |
| 9.2.2. The forward model | 314 | 11.6.2. Simultaneous separation and segmentation | 405 |
| 9.3. Inversion in the linear case | 315 | 11.6.3. Algorithmic considerations | 407 |
| 9.3.1. Diffraction tomography | 315 | 11.7. Appendix 1: <i>a posteriori</i> distributions | 407 |
| 9.3.2. The Bayesian approach | 319 | 11.8. Bibliography | 409 |
| 9.3.3. Results | 325 | | |
| 9.4. Inversion in the non-linear case | 325 | Chapter 12. Stereo Reconstruction in Satellite and Aerial Imaging | 411 |
| 9.4.1. The discrete forward model | 325 | Julie DELON and Andrés ALMANSA | |
| 9.4.2. The Bayesian approach | 327 | 12.1. Introduction | 411 |
| 9.4.3. Results | 331 | 12.2. Principles of satellite stereovision | 412 |
| 9.5. Conclusion | 335 | 12.2.1. Acquisition and calibration | 412 |
| 9.6. Bibliography | 336 | 12.2.2. Measurement accuracy and <i>B/H</i> ratio | 413 |
| Chapter 10. Shape from Shading | 339 | 12.2.3. Deformation models | 414 |
| Jean-Denis DUROU | | 12.3. Matching | 415 |
| 10.1. Introduction | 339 | 12.3.1. Data-fitting term | 416 |
| 10.2. Modeling of shape from shading | 340 | 12.4. Regularization | 421 |
| 10.2.1. Optics of photography | 340 | 12.4.1. Variational methods | 421 |
| 10.2.2. SFS models | 348 | 12.4.2. Special case of small <i>B/H</i> | 422 |
| 10.3. Resolution of shape from shading | 353 | 12.4.3. Discrete optimization methods | 423 |
| 10.3.1. Well- and ill-posed inverse problems | 353 | 12.4.4. Affine or geometric methods | 424 |
| 10.3.2. Solving non-differential SFS models | 357 | 12.5. Numerical considerations | 425 |
| 10.3.3. Solving differential SFS models | 367 | 12.5.1. Outline of sampling theory | 426 |
| 10.4. Conclusion | 371 | 12.5.2. Aliasing and matching | 428 |
| 10.5. Bibliography | 372 | 12.5.3. Discretization and sampling of the matching cost function | 429 |
| Chapter 11. Image Separation | 377 | 12.6. Conclusion | 432 |
| Hichem SNOUSSI and Ali MOHAMMAD-DJAFARI | | 12.7. Bibliography | 434 |
| 11.1. General introduction | 377 | | |
| 11.2. Blind image separation | 378 | Chapter 13. Fusion and Multi-modality | 437 |
| 11.2.1. Source and noise model | 379 | Christophe COLLET, Farid FLITTI, Stéphanie BRICQ and André JALOBEANU | |
| 11.2.2. Aims | 383 | 13.1. Fusion of optical multi-detector images without loss of information | 437 |
| 11.3. Bayesian formulation | 384 | 13.1.1. Motivation and aims of image data fusion | 437 |
| 11.3.1. <i>A posteriori</i> distribution | 384 | 13.2. Fusion of multi-spectral images using hidden Markov trees | 438 |
| | | 13.2.1. Background for multi-spectral image fusion | 438 |
| | | 13.2.2. Fusion of gray-levels | 439 |
| | | 13.2.3. Copula theory | 443 |
| | | 13.2.4. Fusion of the final multi-scale maps, and reconstruction | 445 |

| | |
|--|-----|
| 13.3. Segmentation of multimodal cerebral MRI using an <i>a priori</i> probabilistic map | 448 |
| 13.3.1. Introduction | 448 |
| 13.3.2. Multimodal hidden Markov chains | 448 |
| 13.3.3. Hilbert-Peano scan | 449 |
| 13.3.4. Markov chains | 449 |
| 13.3.5. Use of a probabilistic atlas as a complementary detector | 452 |
| 13.3.6. Contribution of multimodality | 455 |
| 13.4. Bibliography | 458 |
| List of Authors | 461 |
| Index | 463 |
