<b>Preface</b>	<b>xi</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Mathematical optimization . . . . .	1
1.2 Least-squares and linear programming . . . . .	4
1.3 Convex optimization . . . . .	7
1.4 Nonlinear optimization . . . . .	9
1.5 Outline . . . . .	11
1.6 Notation . . . . .	14
Bibliography . . . . .	16
<b>I Theory</b>	<b>19</b>
<b>2 Convex sets</b>	<b>21</b>
2.1 Affine and convex sets . . . . .	21
2.2 Some important examples . . . . .	27
2.3 Operations that preserve convexity . . . . .	35
2.4 Generalized inequalities . . . . .	43
2.5 Separating and supporting hyperplanes . . . . .	46
2.6 Dual cones and generalized inequalities . . . . .	51
Bibliography . . . . .	59
Exercises . . . . .	60
<b>3 Convex functions</b>	<b>67</b>
3.1 Basic properties and examples . . . . .	67
3.2 Operations that preserve convexity . . . . .	79
3.3 The conjugate function . . . . .	90
3.4 Quasiconvex functions . . . . .	95
3.5 Log-concave and log-convex functions . . . . .	104
3.6 Convexity with respect to generalized inequalities . . . . .	108
Bibliography . . . . .	112
Exercises . . . . .	113

<b>4 Convex optimization problems</b>	<b>127</b>
4.1 Optimization problems	127
4.2 Convex optimization	136
4.3 Linear optimization problems	146
4.4 Quadratic optimization problems	152
4.5 Geometric programming	160
4.6 Generalized inequality constraints	167
4.7 Vector optimization	174
Bibliography	188
Exercises	189
<b>5 Duality</b>	<b>215</b>
5.1 The Lagrange dual function	215
5.2 The Lagrange dual problem	223
5.3 Geometric interpretation	232
5.4 Saddle-point interpretation	237
5.5 Optimality conditions	241
5.6 Perturbation and sensitivity analysis	249
5.7 Examples	253
5.8 Theorems of alternatives	258
5.9 Generalized inequalities	264
Bibliography	272
Exercises	273
<b>II Applications</b>	<b>289</b>
<b>6 Approximation and fitting</b>	<b>291</b>
6.1 Norm approximation	291
6.2 Least-norm problems	302
6.3 Regularized approximation	305
6.4 Robust approximation	318
6.5 Function fitting and interpolation	324
Bibliography	343
Exercises	344
<b>7 Statistical estimation</b>	<b>351</b>
7.1 Parametric distribution estimation	351
7.2 Nonparametric distribution estimation	359
7.3 Optimal detector design and hypothesis testing	364
7.4 Chebyshev and Chernoff bounds	374
7.5 Experiment design	384
Bibliography	392
Exercises	393

<b>8 Geometric problems</b>	<b>397</b>
8.1 Projection on a set	397
8.2 Distance between sets	402
8.3 Euclidean distance and angle problems	405
8.4 Extremal volume ellipsoids	410
8.5 Centering	416
8.6 Classification	422
8.7 Placement and location	432
8.8 Floor planning	438
Bibliography	446
Exercises	447
<b>III Algorithms</b>	<b>455</b>
<b>9 Unconstrained minimization</b>	<b>457</b>
9.1 Unconstrained minimization problems	457
9.2 Descent methods	463
9.3 Gradient descent method	466
9.4 Steepest descent method	475
9.5 Newton's method	484
9.6 Self-concordance	496
9.7 Implementation	508
Bibliography	513
Exercises	514
<b>10 Equality constrained minimization</b>	<b>521</b>
10.1 Equality constrained minimization problems	521
10.2 Newton's method with equality constraints	525
10.3 Infeasible start Newton method	531
10.4 Implementation	542
Bibliography	556
Exercises	557
<b>11 Interior-point methods</b>	<b>561</b>
11.1 Inequality constrained minimization problems	561
11.2 Logarithmic barrier function and central path	562
11.3 The barrier method	568
11.4 Feasibility and phase I methods	579
11.5 Complexity analysis via self-concordance	585
11.6 Problems with generalized inequalities	596
11.7 Primal-dual interior-point methods	609
11.8 Implementation	615
Bibliography	621
Exercises	623

---

<b>Appendices</b>	<b>631</b>
<b>A Mathematical background</b>	<b>633</b>
A.1 Norms . . . . .	633
A.2 Analysis . . . . .	637
A.3 Functions . . . . .	639
A.4 Derivatives . . . . .	640
A.5 Linear algebra . . . . .	645
Bibliography . . . . .	652
<b>B Problems involving two quadratic functions</b>	<b>653</b>
B.1 Single constraint quadratic optimization . . . . .	653
B.2 The S-procedure . . . . .	655
B.3 The field of values of two symmetric matrices . . . . .	656
B.4 Proofs of the strong duality results . . . . .	657
Bibliography . . . . .	659
<b>C Numerical linear algebra background</b>	<b>661</b>
C.1 Matrix structure and algorithm complexity . . . . .	661
C.2 Solving linear equations with factored matrices . . . . .	664
C.3 LU, Cholesky, and LDL <sup>T</sup> factorization . . . . .	668
C.4 Block elimination and Schur complements . . . . .	672
C.5 Solving underdetermined linear equations . . . . .	681
Bibliography . . . . .	684
<b>References</b>	<b>685</b>
<b>Notation</b>	<b>697</b>
<b>Index</b>	<b>701</b>
