Contents

Foreword xi
Preface xiii
Author xv

1. History and Background 1
1.1 Introduction 1
1.2 History 3
1.3 Physical Optics 4
1.3.1 Propagation with Aberrations 5
1.3.2 Imaging with Aberrations 8
1.3.3 Representing the Wavefront 12
1.3.3.1 Power-Series Representation 13
1.3.3.2 Zernike Series 13
1.3.3.3 Zernike Annular Polynomials 15
1.3.3.4 Lowest Aberration Modes 15
1.3.4 Interference 16
1.4 Terms in Adaptive Optics 18

2. Sources of Aberrations 23
2.1 Atmospheric Turbulence 23
2.1.1 Descriptions of Atmospheric Turbulence 24
2.1.2 Refractive-Index Structure Constant 27
2.1.3 Turbulence Effects 29
2.1.3.1 Fried's Coherence Length 29
2.1.3.2 Scintillation 31
2.1.3.3 Beam Wander or Tilt 33
2.1.3.4 Higher-Order Phase Variation 35
2.1.4 Turbulence Modulation Transfer Function 39
2.1.5 Multiple Layers of Turbulence 40
2.2 Thermal Blooming 40
2.2.1 Blooming Strength and Critical Power 41
2.2.2 Turbulence, Jitter, and Thermal Blooming 45
2.3 Nonatmospheric Sources 46
2.3.1 Optical Misalignments and Jitter 46
2.3.2 Large Optics: Segmenting and Phasing 47
2.3.3 Thermally Induced Distortions of Optics 49
2.3.4 Manufacturing and Microerrors 51
2.3.5 Other Sources of Aberrations 53

2.3.6 Aberrations due to Aircraft Boundary Layer Turbulence.....53
2.3.7 Aberrations in Laser Resonators and Lasing Media 54

3. Adaptive Optics Compensation 55
3.1 Phase Conjugation 55
3.2 Limitations of Phase Conjugation 60
3.2.1 Turbulence Tilt or Jitter Error.....60
3.2.2 Turbulence Higher-Order Spatial Error 61
3.2.2.1 Modal Analysis.....61
3.2.2.2 Zonal Analysis: Corrector Fitting Error.....62
3.2.3 Turbulence Temporal Error 63
3.2.4 Sensor Noise Limitations.....65
3.2.5 Thermal Blooming Compensation.....66
3.2.6 Anisoplanatism 66
3.2.7 Postprocessing.....69
3.3 Artificial Guide Stars.....70
3.3.1 Rayleigh Guide Star.....72
3.3.2 Sodium Guide Stars.....76
3.4 Lasers for Guide Stars 78
3.5 Combining the Limitations 78
3.6 Linear Analysis 79
3.6.1 Random Wavefronts.....79
3.6.2 Deterministic Wavefronts.....81
3.7 Partial Phase Conjugation.....83

4. Adaptive Optics Systems 85
4.1 Adaptive Optics Imaging Systems 85
4.1.1 Astronomical Imaging Systems.....85
4.1.2 Retinal Imaging.....87
4.2 Beam Propagation Systems.....88
4.2.1 Local-Loop Beam Cleanup Systems.....90
4.2.2 Alternative Concepts.....91
4.2.3 Pros and Cons of Various Approaches 94
4.2.4 Free-Space Laser Communications Systems.....94
4.3 Unconventional Adaptive Optics 95
4.3.1 Nonlinear Optics.....95
4.3.2 Elastic Photon Scattering: Degenerate Four-Wave Mixing.....96
4.3.3 Inelastic Photon Scattering.....98
4.3.3.1 Raman and Brillouin Scattering 98
4.4 System Engineering 103
4.4.1 System Performance Requirements 107
4.4.2 Compensated Beam Properties.....107
4.4.3 Wavefront Reference Beam Properties 108
4.4.4 Optical System Integration.....108

5. Wavefront Sensing 111
5.1 Directly Measuring Phase 112
5.1.1 Nonuniqueness of the Diffraction Pattern.....112
5.1.2 Determining Phase Information from Intensity 113
5.1.3 Modal and Zonal Sensing.....116
5.1.3.1 Dynamic Range of Tilt and Wavefront Measurement 118
5.2 Direct Wavefront Sensing—Modal.....119
5.2.1 Importance of Wavefront Tilt.....119
5.2.2 Measurement of Tilt 122
5.2.3 Focus Sensing.....126
5.2.4 Modal Sensing of Higher-Order Aberrations.....128
5.3 Zonal Direct Wavefront Sensing.....129
5.3.1 Interferometric Wavefront Sensing 129
5.3.1.1 Methods of Interference 130
5.3.1.2 Principle of a Shearing Interferometer.....138
5.3.1.3 Practical Operation of a Shearing Interferometer 140
5.3.1.4 Lateral Shearing Interferometers 140
5.3.1.5 Rotation and Radial Shear Interferometers.....145
5.3.2 Shack–Hartmann Wavefront Sensors 147
5.3.3 Curvature Sensing.....150
5.3.4 Pyramid Wavefront Sensor 151
5.3.5 Selecting a Method 152
5.3.6 Correlation Tracker.....152
5.4 Indirect Wavefront Sensing Methods 153
5.4.1 Multidither Adaptive Optics.....154
5.4.2 Image Sharpening.....159
5.5 Wavefront Sampling 161
5.5.1 Beam Splitters.....161
5.5.2 Hole Gratings.....163
5.5.3 Temporal Duplexing.....163
5.5.4 Reflective Wedges 165
5.5.5 Diffraction Gratings 166
5.5.6 Hybrids.....167
5.5.7 Sensitivities of Sampler Concepts.....170
5.6 Detectors and Noise.....172

6. Wavefront Correction 177
6.1 Modal-Tilt Correction 179
6.2 Modal Higher-Order Correction 180
6.3 Segmented Mirrors 181
6.4 Deformable Mirrors 183
6.4.1 Actuation Techniques.....184
6.4.2 Actuator Influence Functions.....185

6.5 Bimorph Corrector Mirrors 189
6.6 Membranes and Micromachined Mirrors 191
6.7 Edge-Actuated Mirrors 193
6.8 Large Correcting Optics 194
6.9 Special Correction Devices 194
6.9.1 Liquid-Crystal Phase Modulators 195
6.9.2 Spatial Light Modulators 195
6.9.3 Ferrofluid Deformable Mirrors 196

7. Reconstruction and Controls 197
7.1 Introduction 197
7.2 Single-Channel Linear Control 199
7.2.1 Fundamental Control Tools 200
7.2.2 Transfer Functions 201
7.2.3 Proportional Control 206
7.2.4 First- and Second-Order Lag 207
7.2.5 Feedback 208
7.2.6 Frequency Response of Control Systems 209
7.2.7 Digital Controls 216
7.3 Multivariate Adaptive Optics Controls 218
7.3.1 Solution of Linear Equations 218
7.4 Direct Wavefront Reconstruction 222
7.4.1 Phase from Wavefront Slopes 222
7.4.2 Modes from Wavefront Slopes 228
7.4.3 Phase from Wavefront Modes 230
7.4.4 Modes from Wavefront Modes 231
7.4.5 Zonal Corrector from Continuous Phase 231
7.4.6 Modal Corrector from Continuous Phase 232
7.4.7 Zonal Corrector from Modal Phase 233
7.4.8 Modal Corrector from Modal Phase 233
7.4.9 Indirect Reconstructions 234
7.4.10 Modal Corrector from Wavefront Modes 234
7.4.11 Zonal Corrector from Wavefront Slopes 235
7.5 Beyond Linear Control 236

8. Summary of Important Equations 239
8.1 Atmospheric Turbulence Wavefront Expressions 239
8.2 Atmospheric Turbulence Amplitude Expressions 242
8.3 Adaptive Optics Compensation Expressions 242
8.4 Laser Guide Star Expressions 245

Bibliography 247
