

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Particles and Fields . . . . .	1
1.2	Metric and Other Notations . . . . .	2
1.3	Functionals . . . . .	3
1.4	Review of Quantum Mechanics . . . . .	9
1.5	References . . . . .	13
<b>2</b>	<b>Path Integrals and Quantum Mechanics</b>	<b>15</b>
2.1	Basis states . . . . .	15
2.2	Operator Ordering . . . . .	18
2.3	The Classical Limit . . . . .	29
2.4	Equivalence with Schrödinger Equation . . . . .	32
2.5	Free Particle . . . . .	36
2.6	References . . . . .	42
<b>3</b>	<b>Harmonic Oscillator</b>	<b>43</b>
3.1	Path Integral for the Harmonic Oscillator . . . . .	43

3.2	Method of Fourier Transform . . . . .	47
3.3	Matrix Method . . . . .	51
3.4	The Classical Action . . . . .	62
3.5	References . . . . .	70
<b>4</b>	<b>Generating Functional</b>	<b>71</b>
4.1	Euclidean Rotation . . . . .	71
4.2	Time Ordered Correlation Functions . . . . .	79
4.3	Correlation Functions In Definite States . . . . .	82
4.4	Vacuum Functional . . . . .	87
4.5	Anharmonic Oscillator . . . . .	97
4.6	References . . . . .	100
<b>5</b>	<b>Path Integrals for Fermions</b>	<b>101</b>
5.1	Fermionic Oscillator . . . . .	101
5.2	Grassmann Variables . . . . .	106
5.3	Generating Functional . . . . .	113
5.4	Feynman Propagator . . . . .	118
5.5	The Fermion Determinant . . . . .	126
5.6	References . . . . .	132
<b>6</b>	<b>Supersymmetry</b>	<b>133</b>
6.1	Supersymmetric Oscillator . . . . .	133
6.2	Supersymmetric Quantum Mechanics . . . . .	141
6.3	Shape Invariance . . . . .	145

6.4	Example . . . . .	151
6.5	References . . . . .	153
<b>7</b>	<b>Semi-Classical Methods</b>	<b>155</b>
7.1	WKB Approximation . . . . .	155
7.2	Saddle Point Method . . . . .	164
7.3	Semi-Classical Methods in Path Integrals . . . . .	168
7.4	Double Well Potential . . . . .	174
7.5	References . . . . .	185
<b>8</b>	<b>Path Integral for the Double Well</b>	<b>187</b>
8.1	Instantons . . . . .	187
8.2	Zero Modes . . . . .	196
8.3	The Instanton Integral . . . . .	202
8.4	Evaluating the Determinant . . . . .	207
8.5	Multi-Instanton Contributions . . . . .	215
8.6	References . . . . .	219
<b>9</b>	<b>Path Integral for Relativistic Theories</b>	<b>221</b>
9.1	Systems with Many Degrees of Freedom . . . . .	221
9.2	Relativistic Scalar Field Theory . . . . .	226
9.3	Feynman Rules . . . . .	241
9.4	Connected Diagrams . . . . .	244
9.5	References . . . . .	248

<b>10 Effective Action</b>	<b>249</b>
10.1 The Classical Field . . . . .	249
10.2 Effective Action . . . . .	258
10.3 Loop Expansion . . . . .	268
10.4 Effective Potential at One Loop . . . . .	272
10.5 References . . . . .	279
<b>11 Invariances and Their Consequences</b>	<b>281</b>
11.1 Symmetries of the Action . . . . .	281
11.2 Noether's Theorem . . . . .	286
11.2.1 Example . . . . .	291
11.3 Complex Scalar Field . . . . .	295
11.4 Ward Identities . . . . .	300
11.5 Spontaneous Symmetry Breaking . . . . .	306
11.6 Goldstone Theorem . . . . .	318
11.7 References . . . . .	321
<b>12 Systems at Finite Temperature</b>	<b>323</b>
12.1 Statistical Mechanics . . . . .	323
12.2 Critical Exponents . . . . .	331
12.3 Harmonic Oscillator . . . . .	337
12.4 Fermionic Oscillator . . . . .	345
12.5 References . . . . .	349
<b>13 Ising Model</b>	<b>351</b>
13.1 One Dimensional Ising Model . . . . .	351

13.2 The Partition Function . . . . .	358
13.3 Two Dimensional Ising Model . . . . .	366
13.4 Duality . . . . .	368
13.5 High and Low Temperature Expansions . . . . .	374
13.6 Quantum Mechanical Model . . . . .	382
13.7 Duality in the Quantum System . . . . .	392
13.8 References . . . . .	395
