Contents

1 Fundamentals **1**
1.1 Classical Mechanics 1
1.2 Quantum Mechanics 11
1.3 Dirac's Bra-Ket Formalism 17
1.4 Observables 26
1.5 Quantum Mechanics of General Lagrangian Systems 30
1.6 Particle on the Surface of a Sphere 37
1.7 Spinning Top 40
1.8 Time Evolution Operator 47
1.9 Properties of the Time Evolution Operator 51
1.10 Heisenberg Picture of Quantum Mechanics 55
1.11 Classical and Quantum Statistics 58
Appendix 1A The Asymmetric Top 63
Notes and References 65

2 Path Integrals - Elementary Properties and Simple Solutions 67
2.1 Path Integral Representation of Time Evolution Amplitudes 67
2.2 Exact Solution for a Free Particle 77
2.3 Finite-ϵ Properties of the Free-Particle Amplitude 88
2.4 Exact Solution for the Harmonic Oscillator 88
2.5 Useful Fluctuation Formulas 93
2.6 Oscillator Amplitude on a Finite Lattice 95
2.7 Gelfand-Yaglom Formula 97
2.8 Oscillator Wave Functions 102
2.9 Path Integrals and Quantum Statistics 103
2.10 Density Matrix 106
2.11 Quantum Statistics of Harmonic Oscillator 111
2.12 Time-Dependent Harmonic Potential 117
2.13 Functional Measure in Fourier Space 121
2.14 Classical Limit 122
2.15 Calculation Techniques on a Finite Sliced Time Axis. Poisson Formula 124

2.16 Finite-N Behavior of Thermodynamic Quantities 129
2.17 Charged Particle in Magnetic Field 131
2.18 Gauge Invariance and Alternative Path Integral Representation 137
Appendix 2A Derivation of the Baker-Campbell-Hausdorff Formula 139
Appendix 2B Direct Calculation of the Oscillator Amplitude . . . 141
Notes and References 144

3 External Sources, Correlations, and Perturbation Theory 147
3.1 External Sources 147
3.2 Green Function of the Harmonic Oscillator 151
3.2.1 Wronski Construction 151
3.2.2 Spectral Representation 152
3.3 Periodic and Antiperiodic Oscillator Green Functions 153
3.4 Summing the Spectral Representation of the Green Function 160
3.5 Time Evolution Amplitude in the Presence of a Source Term 162
3.6 External Source in Quantum-Statistical Path Integral 166
3.6.1 Continuation of the Real-Time Result 166
3.6.2 Calculation at Imaginary Time 168
3.7 Green Functions on a Lattice 171
3.8 A Particle in a Bath of Oscillators 172
3.9 Correlation Functions, Generating Functional, and Wick Expansion 174
3.10 Perturbation Expansion of Anharmonic Systems 177
3.11 Calculation of Perturbation Series via Feynman Diagrams . . 179
3.12 Rayleigh-Schrödinger expansion 184
Appendix 3A Feynman Integrals for $T \neq 0$ 189
Appendix 3B Energy Shifts for $gx^4/4$-Interaction 192
Appendix 3C Recursion Relations for Perturbation Coefficients . 194
Notes and References 198

4 Semiclassical Time Evolution Amplitude 199
4.1 The Wentzel-Kramers-Brillouin (WKB) Approximation . . . 199
4.2 Saddle Point Approximation 204
4.2.1 Ordinary Integrals 204
4.2.2 Path Integrals 206
4.3 The Van Vleck-Pauli-Morette Determinant 210
4.4 Semiclassical Fixed-Energy Amplitude 215
4.5 Semiclassical Quantum-Mechanical Partition Function 218
4.6 Multi-Dimensional Systems 223
Notes and References 227

5 Variational Perturbation Theory **229**
5.1 Effective Classical Partition Function . . . 229
5.2 Feynman-Kleinert Trial Partition Function . . . 232
5.3 Optimal Upper Bound . . . 238
5.4 Accuracy of the Approximation . . . 239
5.5 Possible Direct Generalizations . . . 241
5.6 External Sources and Correlations . . . 243
5.7 Effective Classical Potential for the Anharmonic Oscillator and the Double-Well Potential . . . 244
5.8 Particle Densities . . . 251
5.9 Extension to D Dimensions . . . 254
5.10 Application to Coulomb and Yukawa Potentials . . . 255
5.11 Effective Potential and Magnetization Curves . . . 259
5.12 Variational Approach to Excitation Energies . . . 262
5.13 Systematic Improvement of the Feynman-Kleinert Approximation. Variational Perturbation Expansion . . . 267
5.14 Applications of Variational Perturbation Expansion . . . 270
5.14.1 Anharmonic Oscillator at $T = 0$ . . . 270
5.14.2 Anharmonic Oscillator at $T > 0$ . . . 272
5.15 Convergence of the Variational Perturbation Expansion . . . 277
5.16 Systematic Improvement of Excited Energies . . . 287
5.17 Application to the Double-Well Potential . . . 288
Appendix 5A Proof of Scaling Relation for Extrema of W_N . . . 291
Notes and References . . . 293

6 Path Integrals with Topological Constraints **297**
6.1 Point Particle on a Circle . . . 297
6.2 Infinite Wall . . . 302
6.3 Point Particle in a Box . . . 307
Notes and References . . . 310

7 Many Particle Orbits — Statistics and Second Quantization 311
7.1 Ensembles of Bose and Fermi Orbits . . . 312
7.2 Fractional Statistics . . . 318
7.3 Second-Quantized Bose Fields . . . 320
7.4 Fluctuating Bose Fields . . . 323
7.5 Second-Quantized Fermi Fields . . . 329
7.6 Fluctuating Fermi Fields . . . 330
7.7 External Sources in a^*, a -Path Integral . . . 336
7.8 Generalization to Pair Terms . . . 339
7.9 Spatial Degrees of Freedom . . . 341
Notes and References . . . 342

8 Path Integrals in Spherical Coordinates **343**
8.1 Angular Decomposition in Two Dimensions . . . 344
8.2 Trouble with Feynman's Path Integral Formula in Radial Coordinates . . . 347
8.3 Cautionary Remarks . . . 351
8.4 Time Slicing Corrections . . . 354
8.5 Angular Decomposition in Three and More Dimensions . . . 359
8.5.1 Three Dimensions . . . 360
8.5.2 D Dimensions . . . 363
8.6 Radial Path Integral for Harmonic Oscillator and Free Particle in D Dimensions . . . 369
8.7 Particle near the Surface of a Sphere in D Dimensions . . . 370
8.8 Angular Barriers near the Surface of a Sphere . . . 373
8.8.1 Angular Barriers in Three Dimensions . . . 374
8.8.2 Angular Barriers in Four Dimensions . . . 379
8.9 Motion on a Sphere in D Dimensions . . . 385
8.10 Path Integrals on Group Spaces . . . 389
8.11 Path Integral of a Spinning Top . . . 392
Notes and References . . . 394

9 Fixed-Energy Amplitude and Wave Functions **395**
9.1 General Relations . . . 395
9.2 Free Particle . . . 398
9.3 Harmonic Oscillator in D Dimensions . . . 402
9.4 Free Particle from $\omega \to 0$ -Oscillator . . . 409
9.5 Charged Particle in a Uniform Magnetic Field . . . 411
Notes and References . . . 418

10 Short-Time Amplitude in Spaces with Curvature and Torsion **419**
10.1 Einstein's Equivalence Principle . . . 420
10.2 Classical Motion of a Mass Point in General Metric-Affine Space . . . 421
10.2.1 Equations of Motion . . . 421
10.2.2 Nonholonomic Mapping to Spaces with Torsion . . . 424
10.2.3 Classical Action Principle for Spaces with Curvature and Torsion . . . 430
10.3 Path Integral in Spaces with Curvature and Torsion . . . 434
10.3.1 Nonholonomic Transformation of the Action . . . 434
10.3.2 The Measure of Path Integration . . . 438
10.4 Completing the Solution of the Path Integral on the Surface of a Sphere . . . 444

10.5 External Potentials and Vector Potentials 445
Notes and References 447

11 Schrödinger Equation in General Metric-Affine Spaces 449
11.1 Integral Equation for Time Evolution Amplitude 449
11.1.1 Short Evaluation of the Integral Equation 450
11.1.2 Alternative Evaluation 453
11.2 Equivalent Path Integral Representations 456
11.3 Potentials and Vector Potentials 461
11.4 Unitarity Questions 462
11.5 Alternative Attempts 464
Appendix 11A Cancellations in Effective Potential 465
Appendix 11B DeWitt's Amplitude 468
Notes and References 469

12 New Path Integral Formula for Singular Potentials 471
12.1 Path Collapse in Feynman's formula for the Coulomb System 471
12.2 Stable Path Integral with Singular Potentials 474
12.3 Time-Dependent Regularization 480
12.4 Relation with Schrödinger Theory. Wave Functions 482
Notes and References 484

13 Path Integral of the Coulomb System 485
13.1 Pseudotime Evolution Amplitude 485
13.2 Solution for the Two-Dimensional Coulomb System 487
13.3 Absence of Time Slicing Corrections for $D = 2$ 493
13.4 Solution for the Three-Dimensional Coulomb System 499
13.5 Absence of Time Slicing Corrections for $D = 3$ 506
13.6 Geometric Argument for Absence of Time Slicing Corrections 510
13.7 Comparison with Schrödinger Theory 511
13.8 Angular Decomposition of the Amplitude, and Radial Wave Functions 516
13.9 Remarks on the Geometry of Four-Dimensional u^μ-Space . . 521
Appendix 13A Group-Theoretic Aspects of Coulomb States 523
Notes and References 528

14 Solution of Further Path Integrals by the Duru-Kleinert Method 529
14.1 One-Dimensional Systems 529
14.2 Derivation of the Effective Potential 533
14.3 Comparison with Schrödinger Quantum Mechanics 537
14.4 Applications 538

14.4.1 Radial Harmonic Oscillator and Morse System . . . 539
14.4.2 Radial Coulomb System and Morse System 541
14.4.3 Equivalence of Radial Coulomb System and Radial Oscillator 542
14.4.4 Angular Barrier near a Sphere, and Rosen-Morse Potential 551
14.4.5 Angular Barrier near a Four-Dimensional Sphere, and General Rosen-Morse Potential 554
14.4.6 Hulthén Potential and General Rosen-Morse Potential 557
14.4.7 Extended Hulthén Potential and General Rosen-Morse Potential 560
14.5 D-Dimensional Systems 561
14.6 Path Integral of the Dionium Atom 563
14.6.1 Formal Solution 564
14.6.2 Absence of Time Slicing Corrections 567
14.7 Time-Dependent Duru-Kleinert Transformation 572
Appendix 14A Affine Connection of Dionium System 575
Appendix 14B Algebraic Aspects of Dionium States 576
Notes and References 577

15 Path Integrals in Polymer Physics 578
15.1 Polymers and Ideal Random Chains 578
15.2 Moments of End-to-End Distribution 580
15.3 Exact End-to-End Distribution in Three Dimensions 583
15.4 Short-Distance Expansion for a Long Polymer 584
15.5 Saddle Point Approximation to Three-Dimensional End-to-End Distribution 587
15.6 Path Integral for the Limiting Distribution 589
15.7 Stiff Polymers 590
15.8 Excluded-Volume Effects 595
15.9 Flory's Argument 604
15.10 Polymer Field Theory 604
Notes and References 613

16 Polymers and Particle Orbits in Multiply Connected Spaces 615
16.1 Entangled Polymers 615
16.2 Entangled Fluctuating Particle Orbit: The Aharonov-Bohm Effect 619
16.3 Aharonov-Bohm Effect and Fractional Statistics 631
16.4 Self-Entanglement of a Polymer 636

16.5 The Gauss Invariant of Two Curves . . . 652
16.6 Bound States of Polymers — Ribbons . . . 655
16.7 The Chern-Simons Theory of Entanglements . . . 662
16.8 Non-Abelian Chern-Simons Theory . . . 668
16.9 Second-Quantized Anyon Fields . . . 670
16.10 Anyonic Superconductivity . . . 673
16.11 Fractional Quantum Hall Effect . . . 676
Appendix 16A Kauffman and BLM/Ho polynomials . . . 680
Appendix 16B Skein Relation between Wilson Loop Integrals . . . 681
Appendix 16C London Equations . . . 684
Appendix 16D Hall Effect in Electron Gas . . . 686
Notes and References . . . 686

17 Path Integrals and Tunneling 692
17.1 Double-Well Potential . . . 692
17.2 Classical Solutions — Kinks and Antikinks . . . 695
17.3 Quadratic Fluctuations . . . 700
17.3.1 Zero-Eigenvalue Mode . . . 706
17.3.2 Continuum Part of Fluctuation Factor . . . 710
17.4 General Formula for Eigenvalue Ratios . . . 712
17.5 Fluctuation Determinant from Classical Solution . . . 714
17.6 Wave Functions of Double-Well . . . 718
17.7 Gas of Kinks and Antikinks, and Level Splitting Formula . . . 720
17.8 Fluctuation Correction to Level Splitting . . . 725
17.9 Tunneling and Decay . . . 731
17.10 Large-Order Behavior of Perturbation Expansions . . . 741
17.10.1 Growth Properties of Expansion Coefficients . . . 741
17.10.2 Semiclassical Large-Order Behavior . . . 745
17.10.3 Fluctuation Correction to the Imaginary Part and Large-Order Behavior . . . 750
17.10.4 Variational Approach to Tunneling. Perturbation Coefficients to All Orders . . . 753
17.10.5 Large-Order Behavior and Convergence of Variational Perturbation Expansion . . . 761
17.11 Decay of Supercurrent in a Thin Closed Wire . . . 767
17.12 Decay of Metastable Thermodynamic Phases . . . 780
17.13 Decay of Metastable Vacuum State in Quantum Field Theory 787
17.14 Crossover from Quantum Tunneling to Thermally Driven Decay 789
Appendix 17A Feynman Integrals of Fluctuation Correction . . . 791
Notes and References . . . 794

18 Path Integrals and Nonequilibrium Quantum Statistics 797
18.1 Linear Response and Time-Dependent Green Functions for $T \neq 0$ . . . 797
18.2 Spectral Representations of $T \neq 0$ Green Functions . . . 801
18.3 Nonequilibrium Green Functions . . . 809
18.4 Perturbation Theory for Nonequilibrium Green Functions . . . 818
18.5 Path Integral Coupled to a Thermal Reservoir. Langevin Equation . . . 824
18.6 Fokker-Planck Equation . . . 831
18.7 Stochastic Interpretation of Quantum-Mechanical Amplitudes 834
18.8 Heisenberg Picture for Probability Evolution . . . 835
Appendix 18A Inequalities for Diagonal Green Functions . . . 840
Appendix 18B Decomposition of Operator Products . . . 845
Notes and References . . . 846

19 Path Integrals for Relativistic Particle Orbits 848
19.1 Particular Features of Relativistic Path Integrals . . . 849
19.2 Improved Action for Fluctuating Relativistic Particle Orbit . 852
19.3 Relativistic Coulomb System . . . 856
Notes and References . . . 860
