3	SELF-SIMILARITY—DISCRETE, CONTINUOUS, STRICT, AND OTHERWISE	81
	The Logarithmic Spiral, Cutting Knives, and Wideband Antennas 89 Some Simple Cases of Self-Similarity 93 Weierstrass Functions and a Musical Paradox 96 More Self-Similarity in Music: The Tempered Scales of Bach 99 The Excellent Relations between the Primes 3, 5, and 7 102	
4	POWER LAWS: ENDLESS SOURCES OF SELF-SIMILARITY	103
	The Sizes of Cities and Meteorites 103 A Fifth Force of Attraction 105 Free of Natural Scales 107 Bach Composing on All Scales 107 Birkhoff's Aesthetic Theory 109 Heisenberg's Hyperbolic Uncertainty Principle 112 Fractional Exponents 115 The Peculiar Distribution of the First Digit 116 The Diameter Exponents of Trees, Rivers, Arteries, and Lungs 117	
5	NOISES: WHITE, PINK, BROWN, AND BLACK	121
	Pink Noise 122 Self-Similar Trends on the Stock Market 126 Black Noises and Nile Floods 129 Warning: World Warming 131 Fractional Integration: A Modern Tool 131 Brownian Mountains 133 Radon Transform and Computer Tomography 134 Fresh and Tired Mountains 135	
6	BROWNIAN MOTION, GAMBLING LOSSES, AND INTERGALACTIC VOIDS: RANDOM FRACTALS PAR EXCELLENCE	139
	The Brownian Beast Tamed 140 Brownian Motion as a Fractal 141 How Many Molecules? 143 The Spectrum of Brownian Motion 144 The Gambler's Ruin, Random Walks, and Information Theory 145 Counterintuition Runs Rampant in Random Runs 146 More Food for Fair Thought 147 The St. Petersburg Paradox 148 Shannon's Outguessing Machine 149 The Classical Mechanics of Roulette and Shannon's Channel Capacity 150	

The Clustering of Poverty and Galaxies 152 Levy Flights through the Universe 155 Paradoxes from Probabilistic Power Laws 155 Invariant Distributions: Gauss, Cauchy, and Beyond 157 7 CANTOR SETS: SELF-SIMILARITY AND ARITHMETIC DUST 161 Cantor Sets as Invariant Sets 161 Cantor Sets as Invariant Sets 165 Symbolic Dynamics and Deterministic Chaos 166 Devil's Staircases and a Pinball Machine 167 Mode Locking in Swings and Clocks 171 The Frustrated Manhattan Pedestrian 172 Arnold Tongues 174 8 FRACTALS IN HIGHER DIMENSIONS AND A DIGITAL SUNDIAL 177 Cartesian Products of Cantor Sets 177 A Leaky Gasket, Soft Sponges, and Swiss Cheeses 178 A Cantor-Set Sundial 181 Fat Fractals 183 9 MULTIFRACTALS: INTIMATELY INTERTWINED FRACTALS 187 The Distributions of People and Ore 187 Self-Affine Fractals without Holes 190 The Multifractal Spectrum: Turbulence and Diffusion-Limited Aggregation 193 Viscous Fingering 199 Multifractal Dimensions from Generalized Entropies 203 The Relation between the Multifractal Spectrum $f(\alpha)$ and the Mass Exponents $\tau(q)$ 205 Strange Attractors as Multifractals 206 A Greedy Algorithm for Unfavorable Odds 207 10 SOME PRACTICAL FRACTALS AND THEIR MEASUREMENT 21 Dimensions from Box Counting 213 The Mass Dimension 215 The Correlation Dimension 220 Infinitely Many Dimensions 220 The Determination of Fractal Dimensions from Time Series 223		· · · · · · · · · · · · · · · · · · ·

Dimensions from Box Counting 213 The Mass Dimension 215 The Correlation Dimension 220 Infinitely Many Dimensions 220 The Determination of Fractal Dimensions from Time Series 223	10	SOME PRACTICAL FRACTALS AND THEIR MEASUREMENT	211
		Dimensions from Box Counting 213 The Mass Dimension 215 The Correlation Dimension 220 Infinitely Many Dimensions 220 The Determination of Fractal Dimensions from Time Series 223	

Abstract Concrete 224 Fractal Interfaces Enforce Fractional Frequency Exponents 225 The Fractal Dimensions of Fracture Surfaces 230 The Fractal Shapes of Clouds and Rain Areas 231 Cluster Agglomeration 232 Diffraction from Fractals 233

11 ITERATION, STRANGE MAPPINGS, AND A BILLION DIGITS FOR PI

237

Looking for Zeros and Encountering Chaos 239 The Strange Sets of Julia 243 A Multifractal Julia Set 245 The Beauty of Broken Linear Relationships 249 The Baker's Transformation and Digital Musical Chairs 251 Arnol'd's Cat Map 253 A Billion Digits for π 257 Bushes and Flowers from Iterations 259

12 A SELF-SIMILAR SEQUENCE, THE LOGISTIC PARABOLA, AND SYMBOLIC DYNAMICS

Self-Similarity from the Integers 264 The Logistic Parabola and Period Doubling 268 Self-Similarity in the Logistic Parabola 272 The Scaling of the Growth Parameter 274 Self-Similar Symbolic Dynamics 277 Periodic Windows Embedded in Chaos 279 The Parenting of New Orbits 282 The Calculation of the Growth Parameters for Different Orbits 286 Tangent Bifurcations, Intermittency, and 1/f Noise 289 A Case of Complete Chaos 291 The Mandelbrot Set 295 The Julia Sets of the Complex Quadratic Map 297

13 A FORBIDDEN SYMMETRY, FIBONACCI'S RABBITS, AND A NEW STATE OF MATTER

301

263

The Forbidden Fivefold Symmetry 301 Long-Range Order from Neighborly Interactions 304 Generation of the Rabbit Sequence from the Fibonacci Number System 307 The Self-Similar Spectrum of the Rabbit Sequence 308 Self-Similarity in the Rabbit Sequence 310 A One-Dimensional Quasiperiodic Lattice 310 Self-Similarity from Projections 311 More Forbidden Symmetries 315

14 PERIODIC AND QUASIPERIODIC STRUCTURES IN SPACE—THE ROUTE TO SPATIAL CHAOS	319
Periodicity and Quasiperiodicity in Space 320 The Devil's Staircase for Ising Spins 321 Quasiperiodic Spatial Distributions 322 Beatty Sequence Spins 325 The Scaling Laws for Quasiperiodic Spins 329 Self-Similar Winding Numbers 330 Circle Maps and Arnold Tongues 331 Mediants, Farey Sequences, and the Farey Tree 334 The Golden-Mean Route to Chaos 340	
15 PERCOLATION: FROM FOREST FIRES TO EPIDEMICS	345
Critical Conflagration on a Square Lattice 346 Universality 350 The Critical Density 353 The Fractal Perimeters of Percolation 353 Finite-Size Scaling 354	
16 PHASE TRANSITIONS AND RENORMALIZATION	357
A First-Order Markov Process 357 Self-Similar and Non-Self-Similar Markov Processes 358 The Scaling of Markov Outputs 360 Renormalization and Hierarchical Lattices 362 The Percolation Threshold of the Bethe Lattice 363 A Simple Renormalization 367	
17 CELLULAR AUTOMATA	371
The Game of Life 373 Cellular Growth and Decay 375 Biological Pattern Formation 382 Self-Similarity from a Cellular Automaton 383 A Catalytic Converter as a Cellular Automaton 386 Pascal's Triangle Modulo N 387 Bak's Self-Organized Critical Sandpiles 389
