Preface	ix
1. Electromagnetism and General Relativity	1
<i>M. W. Evans</i>	
1.1 Introductory Essay	1
1.2 The Origin of the B Cyclics in the Invariant Relations of the Poincaré Group	14
1.3 The $B^{(3)}$ Field in Riemannian Space-time	18
1.4 The Geodesic Equations for the Electrodynamic Sector in Riemannian Space-time	22
2. Field Equations of the Electromagnetic Sector	33
<i>M. W. Evans</i>	
2.1 Geometry	33
2.2 $B^{(3)}$ the Catalyst for Change	35
2.3 Geometrical Equations of Electromagnetism and the Unified Field	37
3. The Fundamental Spin Field $B^{(3)}$	51
<i>M. W. Evans</i>	
3.1 Theorems	54
3.2 The Relativistic Helicity of the Classical Field	57
3.3 The Quantum of Charge as the Invariant Gyromagnetic Ratio	62
3.4 The Fundamental Quanta in Electromagnetic Radiation	74
3.5 Atomic Absorption	80
3.6 Lorentz Transformation of the B Cyclics and the Fundamental Displacement Current $J^{(3)}$	88
4. The A Cyclics Derivation and Reduction	97
<i>M. W. Evans</i>	
4.1 Definition of the Complex Vector Field, and Gauging	98
4.2 Gauge Transformation and Measurable Effects of Topology	102
4.3 The Cyclic Structure of Vacuum Electromagnetism: Quantization and Derivation of Maxwell's Equations	107
4.4 The Cyclic Structure of Vacuum Electromagnetism: the Lorentz Equation	112
5. Practical Advantages of $B^{(3)}$ in Atomic and Molecular Spectroscopy	117
<i>M. W. Evans</i>	
5.1 Origin of the Conjugate Product in the Dirac Equation	120
5.2 Extension to Atoms and Molecules	123
5.3 Summary of Electromagnetically Induced ESR Effects	132

6. Physical Meaning of the Photon's Wavefunction According to Ettore Majorana	137
<i>Erasmus Recami and M. W. Evans</i>	
6.1 Introduction	137
6.2 A Dirac-like Equation for the Photon [1]	138
6.3 Comments	142
7. The Adiabatic Changes of State of a Photon Gas	147
<i>Milán Mészáros</i>	
7.1 Introduction	147
7.2 Changes of State of the Ideal Gas	148
7.3 The Photon Gas as an Ideal Gas	153
7.4 Thermodynamics of a Photon Gas: Self-Inconsistency	155
7.5 Summary and Conclusions	158
8. The Conservation of Helicity	163
<i>M. W. Evans</i>	
8.1 The Dual Pseudo-Tensor	165
8.2 The Dual Pseudo-Vector \tilde{B}^μ and Dual Vector E^μ	171
8.3 The Dual Four-Vectors of the Vacuum Electromagnetic Field	178
8.4 The Fundamental Equation of Electrodynamics	185
8.5 Vacuum Limits	191
8.6 Stokes' Theorem	193
8.7 Stress-Energy-Momentum Tensor	195
8.8 Lie Algebra of the Relativistic Field Helicity Vectors	197
9. On the Pressure of Electromagnetic Radiation	205
<i>Pal R. Molnár, Tamas Borbély, and Bulcsu Fajszí</i>	
9.1 Introduction	205
9.2 The Pressure of Electromagnetic Fields	207
9.3 The Pressure in a Cavity Resonator	213
9.4 The Pressure in the Cavity with $\mathbf{B}^{(3)}$	215
9.5 Summary	217
10. Electromagnetic Space-Charge Waves in Vacuo	219
<i>B. Lehnert</i>	
10.1 Introduction	219
10.2 Basis of Present Approach	221
10.3 New Features Introduced by the Present Approach	225
10.4 Nontransverse Plane Wave Types	227
10.5 General Conditions on Total Reflection	231
10.6 The Electric and Magnetic Fields of Plane Waves	236
10.7 Total Reflection of Homogeneous Incident Wave	239

10.8 Total Reflection of Inhomogeneous Incident Wave	243
10.9 Conclusions and Discussion on Total Reflection	245
10.10 Axisymmetric Wave Modes	247
10.11 Summary	257
11. Action at a Distance and Self-Consistency of Classical Electrodynamics	261
<i>A.E. Chubykalo and R. Smirnov-Rueda</i>	
11.1 Historical Background	261
11.2 Inadequacy of the Faraday-Maxwell Concept of Field in the Conventional Electromagnetic Theory	265
11.3 Mathematical Inconsistencies in the Formulation of Maxwell-Lorentz Equations for a One Charge System and their Alternative Form	272
11.4 Reconsidered Maxwell-Hertz Theory and Relativistically Invariant Formulation of the Alternative Maxwell Equations	281
11.5 Analysis of Classical Difficulties and the Hamiltonian Form of the Complete Maxwell Equations	292
11.6 Non-radiation Condition for Free Electromagnetic Field	299
11.7 Conclusions	302
12. The Weinberg Formalism and New Looks at Electromagnetic Theory	305
<i>Valeri V. Dvoeglazov</i>	
12.1 Historical Notes	305
12.2 The Weinberg formalism	317
12.3 The Weinberg Formalism in New Development	322
12.4 Discussion	
Appendices	
<i>M. W. Evans</i>	
A. Reduction of Equation (1.29) to Equation (1.32)	355
B. Four Dimensional Cyclics	357
C. Complete Lie Algebra of the Poincaré Group	363
D. Standard Expressions for Generator Matrices	375
E. Poincaré Group, Maxwell Equations and Cyclics	379
F. The Lehnert Current	383
G. Some Useful Relations in Spherical Polar Coordinates	385
H. Selected Papers	389
♦ Invariance of the B Cyclics	391
♦ The B Cyclic Theorem for Multipole Radiation	399
♦ Zero Field Helicity of the U(1) Gauge	405
♦ Link Between Yang Mills Theory of Electrodynamics and Relativistic Helicity	413
♦ Description of the Inverse Faraday Effect in Terms of Rotational Energy Transferred in a Photon-Electron Collision	419

and Beth Effects in Liquid Water	425
Index	443
Contents, Volume 1	453
Contents, Volume 2	457
Contents, Volume 3	459
