# CONTENTS

Preface	5	xiii
Refere	nces	xxv
Volum	etto I	1
1	Electric potential	1
2	Retarded potential	4
3	Interaction energy of two electric or magnetic charge distribu- tions	5
4	Skin effect in homogeneous cylindrical electric conductors	6
5	Thermodynamics of the thermoelectric cells	10
6	Energy of an isolated conductor	11
7	Attraction between masses which are far apart	12
8	Formulae	14
9	Electric lines	15
10	Density of a spherical mass distribution	18
11	Limit skin effect	18
12	Limit skin effect for simply-shaped conductors. Hints for arbi-	00
	trary shapes	23
	12.1 Elliptic cross sections	23
19	12.2 Effect of the irregularities of the boundary	24
13	Hysteresis in magnetic conductors in the limit skin effect regime	20
14	charges in its own plane	28
15	Field produced by a circular charge current in a plane	20
10 16	Weak skin effect in conductors, with an elliptic cross section, having the same magnetic permeability as the surrounding	20
	medium	30
17	Oscillating discharges in capacitors	31
18	Self-induction of a very long circular coil with many turns	32
19	Energy of a uniform circular distribution of electric or magnetic	99
00	charges	- <u>3</u> 3
20	Self-induction in a rectilinear coll with finite length	- 30
21	Mean distances of volume, surface, or line elements	- 30 - 20
22	Evaluation of some series	39
23	self-induction of a finite (small) number of turns	41
0.4	V i ti full and a milite (smail) number of turns	41
$\frac{24}{25}$	Mean error in estimating the probability of an event through	43
	a finite number of trials	45
26	Unbalance of a pure three-phase system	46
27	Table for the computation of $x!$	47
28	Influence of a magnetic field on the melting point	48
29	Specific heat of an oscillator	50
30	Do children of the same parents tend to be of the same sex?	52
31	Heat propagation from a certain cross section along an infinite- length bar endowed with another cross section acting as a heat	
	well. A similarity with the crickets	53
32	Combinations	55
33	Energy and specific heat of a rotator	56

34	Gravitational attraction of an ellipsoid	58
35	Special cases: prolate ellipsoid and spheroid	63
36	Equilibrium of a rotating fluid	66
37	Definite integrals	69
<b>38</b>	Heat propagation in an isotropic and homogeneous medium	71
	38.1 One-dimensional propagation	71
39	Conformal transformations	74
40	Wave mechanics of a mass point in a conservative field. Vari-	77
41	Electromagnetic mass of the electron	78
42	Legendre polynomials	82
43	$\nabla^2$ in spherical coordinates	83

# Volumetto II

1	$\nabla^2$ in cylindrical coordinates	85
2	Expansion of a harmonic function in a plane	85
3	Quantization of a linear harmonic oscillator	87
4	Diagonalization of a matrix	-90
5	Wave quantization of a point particle that is attracted by a constant force towards a perfectly elastic wall	93
6	Relativistic hamiltonian for the motion of an electron	97
7	The Fermi function	101
8	The interatomic potential without statistics	105
9	Application of the Fermi potential	108
10	Statistical behavior of the fundamental terms in neutral atoms	111
11	Numbers to the fifth power	112
12	Diatomic molecule with identical nuclei	113
13	Numbers to the sixth power	114
14	Numbers to the seventh power	115
15	Second approximation for the potential inside the atom	116
16	Atomic polarizability	117
17	Fourier expansions and integrals	118
18	Blackbody	120
19	Radiation Theory (Part 1)	121
20	Moment of inertia of the Earth	127
21	Radiation Theory (Part 2)	131
22	About matrices	133
23	Radiation Theory (Part 3)	135
24	Perturbed keplerian motion in a plane	137
25	Radiation Theory (Part 4)	144
26	Definite integrals	146
27	Series expansions	148
28	Radiation Theory (Part 5): free electron scattering	150
29	De Broglie waves	154
30	$e^2 \simeq hc$ ?	155
31	The equation $y'' + Py = 0$	156
32	Indeterminacy of vector and scalar potentials	160
33	On the spontaneous ionization of a hydrogen atom placed in a	200
	high potential region	161
34	Scattering of an $\alpha$ particle by a radioactive nucleus	177

### CONTENTS

35	Retard	led potential	188
36	The ec	juation $y'' = xy$	190
37	Resona	ance degeneracy for many-electron atoms	190
38	Variou	s formulae	192
	38.1	Schwarz formula	192
	38.2	Maximum value of random variables	193
	38.3	Binomial coefficients	195
	38.4	Expansion of $1/(1-x)^n$	196
	38.5	Relations between the binomial coefficients	197
	38.6	Mean values of $r^n$ between concentric spherical surfaces	198

# Volumetto III

85

	4		00 <b>r</b>
	1	Evaluation of some series $\Pi U = \pi$	205
	2	The equation $\Box H = T$ $\nabla = 1^{11} \Box = 0^{11} \Box = 0^{$	207
	3	Equilibrium of a rotating neterogeneous liquid body (Clairaut	010
		problem)	212
	4	Determination of a function from its moments	220
	9	Probability curves	230
	6	Evaluation of the integral $\int_0^{\pi/2} \frac{\sin kx}{\sin x} dx$	237
	7	Infinite products	241
	8	Bernoulli numbers and polynomials	242
	9	Poisson brackets	243
	10	Elementary physical quantities	248
	11	"Chasing the dog"	250
	12	Statistical potential in molecules	252
	13	The group of proper unitary transformations in two variables	255
	14	Exchange relations for infinitesimal transformations in the rep-	965
	15	Empirical relations for a two electron stom	205
	10	Empirical relations for a two-electron atom $O(2)$	207
	16	The group of rotations $O(3)$	271
	17	The Lorentz group	276
	18	Dirac matrices and the Lorentz group	279
	19	The spinning electron	287
	20	Characters of $\mathcal{D}_j$ and reduction of $\mathcal{D}_j  imes \mathcal{D}'_j$	298
	21	Intensity and selection rules for a central field	301
	22	The anomalous Zeeman effect (according to the Dirac theory)	307
	23	Complete sets of first-order differential equations	311
		• •	
Vo	olum	etto IV	319

1	Connection between the susceptibility and the electric moment	
	of an atom in its ground state	319
2	Ionization probability for a hydrogen atom in an electric field	322
3	Expansion of Legendre polynomials in the interval $-1 \le x \le 1$	329
4	Multiplication rules for Legendre polynomials	329
5	Green functions for the differential equation $y'' + (2/x - 1) y +$	
	$\phi(x) = 0$	330

205

6	On the series expansion of the integral logarithm function	333
7	Fundamental characters of the group of permutations of $f$ ob-	
	jects	335
8	Expansion of a plane wave in spherical harmonics	339
9	The Rutherford formula deduced from classical mechanics	342
10	The Rutherford formula deduced as a first approximation to	9.45
	the Born method	340
11	The Laplace equation	348
12	Polarization forces between hydrogen atoms	350
13	Integral representation of the Bessel functions	352
14	Cubic symmetry	355
15	Formulae	358
16	Plane waves in the Dirac theory	359
17	Improper operators	369
18	Integral representation of hydrogen eigenfunctions	372
19	Deflection of an alpha ray induced by a heavy nucleus (Classical	
	Mechanics)	374
20	Scattering from a potential of the form $a/r - b/r^2$	375
21	The set of orthogonal functions defined by the equation $y_a'' =$	
	$(x-a)y_a$	377
22	Fourier integral expansions	379
${23}$	Circular integrals	381
$\overline{24}$	Oscillation frequencies of ammonia	382
25	Spherical functions with spin one	385
$\overline{26}$	Scattering of fast elections: relativistic Born method	396
$\overline{27}$	Frequently used atomic quantities	402
$\overline{28}$	Quasi-stationary states	403
29	Spherical functions with spin (II)	417
-0	opinition failed and find opin (in)	

### Volumetto V

1	Representations of the Lorentz group	419
2	Proton-neutron scattering	425
3	Zeros of half-order Bessel functions	427
4	Statistics and thermodynamics	428
	4.1 Entropy of a system in equilibrium	428
	4.2 Perfect gases	429
	4.3 Monoatomic gas	430
	4.4 Diatomic gas	430
	4.5 Numerical expressions for the entropy of a gas	433
	4.6 Free energy of diatomic gases	434
5	Frequently used polynomials	435
	5.1 Legendre polynomials	435
6	Spinor transformations	435
7	Spherical functions with spin $1/2$	441
8	Infinite-dimensional unitary representations of the Lorentz group	
0		446
9	The equation $(\Box H + \lambda)A = p$	450
10	Relevant formulas for the atomic eigenfunctions	454
11	Classical theory of multipole radiation	456
12	Hydrogen eigenfunctions	465
