

CONTENTS

1	The magnetohydrodynamics equations	1
1.1	The general fluid equations	1
1.1.1	The conservation equations	1
1.1.2	Boundary and initial conditions	6
1.1.3	Steady-state equations	7
1.2	The electromagnetic description	8
1.3	The MHD coupling	11
1.3.1	The general MHD system	11
1.3.2	A commonly used simplified MHD coupling	13
1.3.3	The density-dependent case	14
1.4	Other MHD models	14
1.5	The MHD system considered in the sequel	15
1.6	Non-dimensionalized equations	18
2	Mathematical analysis of one-fluid problems	21
2.1	Mathematical results on the incompressible homogeneous Navier–Stokes equations	24
2.1.1	Some basics	25
2.1.2	The illustrative example of the two-dimensional case	39
2.1.3	The three-dimensional hydrodynamic case	49
2.1.4	Related issues	54
2.2	Mathematical results on the one-fluid MHD equations	56
2.2.1	A brief overview of the literature	57
2.2.2	Mathematical analysis	58
2.2.3	Back to the hyperbolic system	63
2.2.4	Stationary problems	64
2.2.5	A hybrid problem	74
2.2.6	Other MHD models and formulations	80
3	Numerical approximation of one-fluid problems	83
3.1	A general framework for problems with constraints	83
3.1.1	A model problem: the Stokes equations	84
3.1.2	Abstract framework for a linear problem	85
3.1.3	Application to the Stokes problem	88
3.1.4	The inf–sup condition	88
3.1.5	The mixed Galerkin method	91
3.1.6	Algebraic aspects	92

3.1.7	Mixed finite element for the Stokes problem	93
3.1.8	Extension to nonlinear problems	95
3.2	A glance at stabilized finite elements	97
3.3	Mixed formulations of the stationary MHD equations	100
3.3.1	A formulation for convex polyhedra and regular domains	101
3.3.2	A formulation for non-convex polyhedra	108
3.4	Mixed finite elements for MHD	115
3.4.1	Mixed finite elements on convex polyhedra and regular domains	116
3.4.2	Mixed finite elements on non-convex polyhedra	117
3.5	Stabilized finite elements for MHD	119
3.6	Solution strategy and algebraic aspects	127
3.6.1	Fully coupled iterations for stationary problems	127
3.6.2	Decoupled iterations for stationary problems	129
3.6.3	Fully coupled iterations for transient problems	131
3.6.4	MHD <i>versus</i> Navier–Stokes solvers	131
3.7	Examples of test cases and simulations	132
3.7.1	Hartmann flows	133
3.7.2	A fluid carrying current in the presence of a magnetic field	136
3.7.3	Convergence of nonlinear algorithms	137
3.8	About the boundary conditions	140
3.8.1	First set of boundary conditions	142
3.8.2	Second set of boundary conditions	143
3.8.3	Practical implementation of the boundary conditions	144
4	Mathematical analysis of two-fluid problems	145
4.1	The difficulties of the non-homogeneous case	146
4.1.1	A formal mathematical argument	147
4.1.2	The major ingredient	148
4.1.3	Short overview of the state of the art for the hydrodynamic case	153
4.2	Weak solutions of the multifluid MHD system	154
4.2.1	Mathematical setting of the equations	154
4.2.2	Existence of a weak solution	156
4.3	On the long-time behavior	168
4.3.1	The nonlinear hydrodynamics case	169
4.3.2	A detour by linearized models	179
4.3.3	The MHD case	183
5	Numerical simulation of two-fluid problems	185
5.1	Numerical approximations in the ALE formulation	186
5.1.1	Weak ALE formulation	187

5.1.2	Time and space discretization	198
5.1.3	Geometric conservation law, stability and conservation properties	204
5.1.4	Surface tension effects	215
5.2	Other approaches	220
5.2.1	Fixed-mesh methods	221
5.2.2	Moving-mesh methods	223
5.3	Example of test cases and simulations	224
5.3.1	A benchmark problem with a free surface	224
5.3.2	On the discrete mass conservation	225
5.3.3	An MHD experiment with a free surface and a free interface	227
6	MHD models for one industrial application	233
6.1	Presentation of aluminum electrolysis	233
6.1.1	The electrolysis process	233
6.1.2	Questions of stability and efficiency of the cell	236
6.1.3	The magnetohydrodynamic modeling of the cell	238
6.1.4	Qualitative interpretation of MHD instability and the Sele criterion	240
6.2	Linearized approaches	243
6.2.1	Basic assumptions	244
6.2.2	A prototypical derivation of a linearized system	248
6.2.3	Analysis of a single Fourier mode and dispersion relations	256
6.2.4	Taking into account the boundaries: analysis of coupling of standing plane waves	259
6.2.5	Numerical computations of the eigenvalues around a precomputed stationary state	267
6.3	A nonlinear approach	272
6.3.1	Generalities about linear <i>versus</i> nonlinear approaches	272
6.3.2	Some experiments on realistic cells	274
6.3.3	Metal pad roll instabilities	278
6.3.4	Spectral analysis	282
6.4	Other nonlinear approaches and conclusions	284
