Program

Tuesday	9th December	-----	4
Wednesday	10th December	-----	8
Thursday	11th December	-----	13
Friday	12th December	-----	14

Abstract of Papers

Tuesday	9th December	-----	15
Wednesday	10th December	-----	69
Thursday	11th December	-----	143
Friday	12th December	-----	151

Author Index		-----	161
---------------------	--	-------	------------

	Title	Page
PLENARY SESSION		
PL-02 S. Imagawa	Roadmap to a heliotron reactor	15
ORAL SESSION		
I-01 H.-S. Bosch	Wendelstein 7-X – a technology step towards Demo	16
I-02 D.T. Anderson	ECRH plasma experiments at B=1 T in HSX	17
I-03 H. Okada	Configuration control experiment in Heliotron J	18
ORAL SESSION		
I-04 K.Y. Watanabe	Recent study of the high performance confinement and the high beta plasmas on the Large Helical Devices	19
I-05 B. Wan	Recent experiments towards to the steady-state operation in the EAST and HT-7 superconducting tokamaks	20
I-06 J.S. Bak	KSTAR construction and commissioning	21
I-07 A. Isayama	Advanced tokamak research in JT-60U and JT-60SA	22
ORAL SESSION		
O-01 F.L. Tabares	The lithium wall stellarator experiment in TJ-II	23
O-02 X.T. Ding	Present progress of transport studies on HL-2A	24
O-03 F. Felici	Recent results of ECRH/ECCD experiments on TCV	25
POSTER SESSION 1		26

No.	Author	Title	Page
P1-02 R. Kanno		Modeling of collisional transport in ergodic region	26
P1-03		withdrawal	27
P1-04 J. Miyazawa		Heating power dependence of the fusion triple product in high-density internal diffusion barrier plasmas in LHD	28
P1-05 M. Sato		Implementation of NBI heating module FIT3D to hierarchy-integrated simulation code TASK3D	29
P1-06 H. Miura		High wavenumber behaviors in 3D MHD instabilities of LHD	30
P1-07 K. Ichiguchi		Numerical study of non-resonant pressure driven mode in heliotron plasma	31
P1-08 K. Saito		Effects of static magnetic islands on interchange mode in straight heliotron configuration	32
P1-09 S. Sakakibara		Effect of external magnetic perturbation on MHD characteristics in the Large Helical Device	33
P1-10 Y. Suzuki		Identification of magnetic islands in Heliotron J experiments	34
P1-11 A. Ito		High-beta toroidal equilibria with flow in reduced fluid models	35
P1-12 K. Uzawa		Intrinsic rotation of magnetic island with finite width	36
P1-13 C. Wiegmann		3D MHD equilibrium calculations for tokamaks with resonant magnetic perturbations: TEXTOR as an example	37
P1-15 A. Froese		Electron parallel heat transport in the scrape-off layer using a particle-in-cell code	38
P1-16 I. Katanuma		Numerical simulation on the flute instabilities in the GAMMA10 magnetic field	39
P1-17 S. Nishimura		Effects of MHD-activity-induced low-n error magnetic fields on the neoclassical viscosities in helical plasmas	40
P1-18 D.R. Mikkelsen		Gyrokinetic stability calculations for related stellarator and tokamak configurations	41
P1-19 A. Wakasa		Development of neoclassical transport database for LHD: DGN/LHD	42
P1-20 N. Nishino		Peripheral plasma turbulence measurement of Heliotron J plasmas	43

No.	Author	Title	Page
P1-21	A. Matsuyama	Langevin equation for guiding center motion and its application to neoclassical transport theory	44
P1-22	Z.B. Shi	2D local turbulence measured by microwave imaging reflectometry in TPE-RX	45
P1-23	E. Belonohy	Quasi-coherent modes in the high density H-mode regime of W7-AS	46
P1-24	M. Shoji	A closed divertor configuration for reduction of the heat load and efficient particle control for helical fusion reactors	47
P1-25	G. Kawamura	1D fluid model of LHD divertor plasma and hydrogen recycling	48
P1-26	H.Y. Zhou	Zell profile analysis from visible bremsstrahlung measurement under different density profiles in LHD	49
P1-27	I. Yamada	Transport analysis of high-Z impurity with MHD effects in tokamak system	50
P1-28	Y. Igitkhanov	Impurity control in helical reactor	51
P1-29	W. Sakaguchi	Formation condition of fiberform nanostructured tungsten by helium plasma irradiation	52
P1-30	Y. Nobuta	Hydrogen concentration and crystal structure of carbon films produced at the duct of local island divertor in Large Helical Device	53
P1-31	Y. Masaoka	Study of alpha-particle confinement in the LHD type reactor	54
P1-32	E. Veshchev	Influence of neutral beam injection direction on fast ion distribution function in Large Helical Device (LHD)	55
P1-34	Y. Igitkhanov	Calculation of the runaway electrons stopping power in ITER	56
P1-35	H. Mimata	A theoretical model of ripple resonance diffusion of alpha particles in tokamaks	57
P1-36	T. Ozaki	Comparison of neutral particle flux decay times on the NBI plasmas in Large Helical Device	58
P1-37	M. Isobe	Shear Alfvén spectra and mode structures of neutral-beam-heated Alfvén eigenmode discharges of CHS	59
P1-38	Y. Taira	Analysis of particle orbits in spherical tokamak-stellarator hybrid system (TOKASTAR), and experiments in Compact-TOKASTAR device	60

No.	Author	Title	Page
P1-39	N. Yanagi	Proposal of split and segmented-type helical coils for the heliotron fusion energy reactor	61
P1-40	S. Uemura	Environmental and economical assessment of various fusion reactors by the calculation of CO2 emission amount	62
P1-41	T. Goto	Development of system design code for heliotron reactor	63
P1-42	Y. Igitkhanov	Assessment of impurity concentration in the helical reactor FFHR	64
P1-43	K. Tobita	Water-cooled solid breeding blanket design for DEMO	65
P1-44	P.R. Goncharov	Calculation of nuclear fusion power for a toroidal plasma device with magnetic confinement	66
P1-45	M. Rajkovic	Control of spatiotemporal chaos and transport reduction in helical magnetic configuration	67

Name	Title	Page
ORAL SESSION		
I-08 M. Tendler	Issues of perpendicular conductivity and electric fields in fusion devices	69
I-09 A. Fujisawa	Confinement studies for future devices beyond ITER	70
I-10 C. Hidalgo	On the physics of shear flows in 3-D geometry	71
I-11 M. Yoshinuma	Characteristic of an impurity hole in Large Helical Device	72
REVIEW & ORAL SESSION		
R-01 F. Jenko	Gyrokinetic turbulence in tokamaks and stellarators: New insights and routes towards transport optimization	73
I-12 T. Morisaki	Topological changes in magnetic flux surfaces during IDB-SDC discharge in LHD	74
ORAL SESSION		
I-13 M. Thumm	Status and high power performance of the 10-MW 140-GHz ECH system for the stellarator W7-X	75
I-14 K. Sakamoto	A high-power gyrotron and high-power mm wave technology for fusion reactor	76
I-15 J.-M. Noterdaeme	Ion cyclotron frequency range (ICRF) power on the way to DEMO	77
O-05 V. Antoni	Accelerator design for the neutral beam injector for ITER	78
ORAL SESSION		
I-16 S. Kobayashi	Configuration effect on energetic particle and energy confinement in NBI plasmas of Heliotron J	79
I-17 S. Kitajima	Recent experimental results in Tohoku University Heliac (TU-Heliac)	80
I-18 K. Hanada	Steady-state operation scenario and the first experimental result on QUEST	81
POSTER SESSION 2		82

No.	Author	Title	Page
P2-01 T. Yamamoto		A global simulation study of ICRF heating by TASK/WM and GNET in helical plasmas	82
P2-02 A. Kuley		Effect of magnetic shear on neutral beam driven lower hybrid instability in tokamak	83
P2-03 T. Shimozuma		Analysis of propagating mode contents in the corrugated waveguides of ECH system for precise alignment	84
P2-04 G. Serianni		Active steering system for the neutral beam injector for ITER	85
P2-06 J. Younis		Photon temperatures of hard X-ray emission of LHCD plasmas and current drive efficiency in the HT-7 tokamak	86
P2-07 K. Saito		ICRF plasma heating in helical reactor	87
P2-08 H. Takahashi		Development of 77 GHz-1 MW ECRH system for LHD	88
P2-09 F. P. Iizima		Flux supply of a field-reversed configuration by NBI heating	89
P2-10 Y. Yoshimura		2nd harmonic ECCD experiment using 84 GHz EC-wave in LHD	90
P2-11 G. Serianni		Optimisation of the magnetic field configuration for the negative ion source of ITER neutral beam injectors	91
P2-12 A. Fukuyama		Full wave analysis of ICRF waves in helical plasmas including the finite Larmor radius effects	92
P2-13 T. Oosako		Fast wave electron heating experiments focusing on competition between damping mechanisms on Large Helical Device	93
P2-14 J.-G. Kwak		Commissioning ICRF system and ICRF assisted discharge cleaning at KSTAR	94
P2-15 A. Murakami		Behavior of high-pressure gases injected to vacuum through a fast solenoid valve for supersonic cluster beam injection	95
P2-16 T. Mizuuchi		Effects of gas-fueling by SMBI on plasma performance in Heliotron J	96
P2-17 G. Motojima		Spectroscopic diagnostics for spatial density distribution of plasmoid by pellet injection in Large Helical Device	97
P2-18 R. Ishizaki		Plasmoid behavior in LHD plasmas	98
P2-19 M. Irie		Plasma diagnostics in the formation stage of LCDC "The local cold and dense compress" from injected pellets	99

Wednesday 10th December - Poster Session 2

No.	Author	Title	Page
P2-20	M. Tokitani	Microscopic deformation of tungsten surfaces by high energy and high flux helium/hydrogen particle bombardment with short pulses	100
P2-22	T. Ohshima	Study on electrode of solid electrolyte hydrogen (isotope) sensor for application to liquid blankets	101
P2-23	H. Chikaraishi	Voltage enhancement of the dc power supplies for dynamic current control of LHD superconducting coils	102
P2-24	A. Nishimura	Framework of collaboration investigation on neutron effect on superconducting magnet materials	103
P2-25	H. Tamura	Conceptual design and development of the indirect-cooled superconducting helical coil in FFHR	104
P2-26	Y. Li	Long-term thermal stability of reduced activation ferritic/martensitic steels as structure materials of fusion blanket	105
P2-27	M. Emoto	Real-time video streaming system for LHD experiment using IP multicast	106
P2-28	M. Takeuchi	Development of a high speed VUV camera system for 2-dimensional imaging of turbulent structures in LHD	107
P2-29	M. Mehranfar	Measurement of Ar excited atoms temperature in D.C planar discharge by diode laser technique	108
P2-30	Q. Yang	Integration of HL-2A diagnostics	109
P2-31	S. Kubo	Collective Thomson scattering study using gyrotron in LHD	110
P2-32	S. Muto	Observation of space and energy distributions of high-energy electrons produced in ECH plasmas of LHD	111
P2-33	M. Goto	Simultaneous measurement of electron and ion temperatures with heliumlike argon spectrum for LHD	112
P2-34	T. Akiyama	Conceptual design of dispersion interferometer using ratio of modulation amplitudes	113
P2-36	K. Mukai	Development of a microwave AM reflectometer for electron density profile measurement in Heliotron J	114
P2-37	H. Nakanishi	Clustered data storage for multi-site fusion experiments	115
P2-38	K. Ishii	Multi-channel neutron emission and triton burn-up measurement on JT-60U using Digital-Signal-Processors	116

Wednesday 10th December - Poster Session 2

No.	Author	Title	Page
P2-39	S. Watanabe	Radiation measurement by using AXUV photodiode arrays with multiple optical filters in Heliotron J	117
P2-40	T. Yoshinaga	Fluctuation observation by the microwave imaging reflectometry in LHD	118
P2-41	D. Kuwahara	Development of 2-D antenna array for microwave imaging reflectometry in LHD	119
P2-42	T. Oishi	Development of beam emission spectroscopy system for the measurement of density fluctuations in LHD	120
P2-43	C. Suzuki	Extension of the energy-resolved soft X-ray imaging system using two CCD cameras in LHD	121
P2-44	T. Ikeda	Validity of flow velocity estimation of an FRC plasma by the Doppler shift measurement of impurity ion spectra	122
P2-45	Y. Nagayama	Development of microwave imaging reflectometry at NIFS	123
P2-46	T. Minami	Development of in-situ density calibration for Thomson scattering measurement by microwave reflectometry on LHD	124
P2-47	A.K. Srivastava	Development of reconfigurable analog and digital circuits for plasma diagnostics measurement systems	125
P2-48	H. Matsuura	Measurement of divertor heat flux in helical-axis Heliotron-J device using a thermal probe	126
P2-49	K. Narihara	Movable Thomson scattering based on optical fiber	127
P2-50	A. Iwamae	Development of the UV and visible impurity influx monitor (divertor) for ITER	128
P2-51	T. Hatae	Recent progress in development of Nd:YAG laser for ITER edge Thomson scattering diagnostics	129
P2-52	B.J. Peterson	Comparison of Au and Pt foils for an imaging bolometer	130
P2-54	K. Nakamura	Numerical study on formation process of helical nonneutral plasmas using electron injection from outside magnetic surfaces	131
P2-55	D. Sugimoto	First result of nonneutral plasmas confined on helical magnetic surfaces of Heliotron J	132
P2-56	Y. Tomita	Charging of positively charged dust particle in weak magnetic field	133

Wednesday 10th December - Poster Session 2

No.	Author	Title	Page
P2-57	K. Otubo	Numerical analysis of slow-wave instabilities in oversized sinusoidally corrugated waveguide driven by finitely thick annular electron beam	134
P2-58	K. Higashi	Algebraic analysis approach for multibody problems II	135
P2-59	K. Bansho	Experimental study on performance of slow cyclotron maser in weakly relativistic region	136
P2-60	T. Oiwa	Preliminary study on uncertainty-driven plasma diffusion	137
P2-61	H. Funasaka	Binary interaction approximation to N-body problems	138
P2-62	K. Singh	TE10 mode and plasma interaction in rectangular waveguide	139
P2-63	A. Matsubara	Micro-spectroscopic investigation of the plasma-surface interaction in the microwave carbothermic reduction of the powdered magnetite	140
P2-64	H. Hosseinkhani	Investigation of laser pulse propagation in plasma using the PIC simulation method	141
P2-65	A. Bustos	Kinetic simulation of heating and collisional transport in a 3D tokamak	142

Thursday 11th December

Name	Title	Page
ORAL SESSION		
I-19 J. Jacquinot	Progress and challenges of steady state operation of fusion devices	143
I-20 Y. Sakamoto	Integrated performance and critical issues towards steady-state operation in JT-60U	144
I-21 T. Seki	Progress of steady state experiment in LHD	145
I-22 Y. Ueda	Status of plasma facing material studies and issues toward DEMO	146
ORAL SESSION		
I-23 M. Shimada	Plasma-facing material development strategy in ITER	147
I-24 R. Stadler	Steady-state in vessel components for the Wendelstein 7-X stellarator	148
O-06 S. Murakami	Energetic ion confinement and lost ion distribution in heliotrons	149

Friday 12th December

Name	Title	Page
ORAL SESSION		
I-25 J. Howard	Spatial heterodyne spectro-polarimetry systems for imaging key plasma parameters in fusion devices	151
I-26 M. Sasao	Innovation on ITER neutron diagnostics towards DEMO	152
O-07 A. Shimizu	The development of 6 MeV heavy ion beam probe system in LHD	153
I-27 D.K. Sze	The progress of TITAN program	154
 ORAL SESSION		
I-28 K. Takahata	Superconducting magnet system of LHD	155
I-29 F. Najmabadi	Key physics and technology issues compact stellarator power plants	156
I-30 R.C. Wolf	From Wendelstein 7-X to a stellarator reactor	157
 ORAL SESSION		
I-31 O. Mitarai	High-density, low temperature ignited operations in FFHR	158
I-32 Y. Kozaki	The design windows and economical potential of heliotron reactors	159
I-33 A. Sagara	Design integration of the LHD-type energy reactor FFHR2 towards Demo	160
