FULL CONTENTS

Conventions	xxvii	FOCUS 2 The First Law	33
Physical chemistry: people and perspectives	xxvii	TOPIC 2A Internal energy	34
List of tables	xxviii	2A.1 Work, heat, and energy	34
List of <i>The chemist's toolkits</i>	xxx	(a) Definitions	34
List of material provided as <i>A deeper look</i>	xxxi	(b) The molecular interpretation of heat and work	35
List of <i>Impacts</i>	xxxii	2A.2 The definition of internal energy	36
		(a) Molecular interpretation of internal energy	36
		(b) The formulation of the First Law	37
ENERGY A First Look	xxxiii	2A.3 Expansion work	37
		(a) The general expression for work	37
FOCUS 1 The properties of gases	3	(b) Expansion against constant pressure	38
TOPIC 1A The perfect gas	4	(c) Reversible expansion	39
1A.1 Variables of state	4	(d) Isothermal reversible expansion of a perfect gas	39
(a) Pressure and volume	4	2A.4 Heat transactions	40
(b) Temperature	5	(a) Calorimetry	40
(c) Amount	5	(b) Heat capacity	41
(d) Intensive and extensive properties	5	Checklist of concepts	43
1A.2 Equations of state	6	Checklist of equations	44
(a) The empirical basis of the perfect gas law	6	TOPIC 2B Enthalpy	45
(b) The value of the gas constant	8	2B.1 The definition of enthalpy	45
(c) Mixtures of gases	9	(a) Enthalpy change and heat transfer	45
Checklist of concepts	10	(b) Calorimetry	46
Checklist of equations	10	2B.2 The variation of enthalpy with temperature	47
TOPIC 1B The kinetic model	11	(a) Heat capacity at constant pressure	47
1B.1 The model	11	(b) The relation between heat capacities	49
(a) Pressure and molecular speeds	11	Checklist of concepts	49
(b) The Maxwell–Boltzmann distribution of speeds	12	Checklist of equations	49
(c) Mean values	14	TOPIC 2C Thermochemistry	50
1B.2 Collisions	16	2C.1 Standard enthalpy changes	50
(a) The collision frequency	16	(a) Enthalpies of physical change	50
(b) The mean free path	16	(b) Enthalpies of chemical change	51
Checklist of concepts	17	(c) Hess's law	52
Checklist of equations	17	2C.2 Standard enthalpies of formation	53
TOPIC 1C Real gases	18	2C.3 The temperature dependence of reaction enthalpies	54
1C.1 Deviations from perfect behaviour	18	2C.4 Experimental techniques	55
(a) The compression factor	19	(a) Differential scanning calorimetry	55
(b) Virial coefficients	20	(b) Isothermal titration calorimetry	56
(c) Critical constants	21	Checklist of concepts	56
1C.2 The van der Waals equation	22	Checklist of equations	57
(a) Formulation of the equation	22	TOPIC 2D State functions and exact differentials	58
(b) The features of the equation	23	2D.1 Exact and inexact differentials	58
(c) The principle of corresponding states	24	2D.2 Changes in internal energy	59
Checklist of concepts	26	(a) General considerations	59
Checklist of equations	26	(b) Changes in internal energy at constant pressure	60

2D.3 Changes in enthalpy	62	TOPIC 3E Combining the First and Second Laws	104	5A.3 The chemical potentials of liquids	150	(c) Activities in terms of molalities	188
2D.4 The Joule–Thomson effect	63	3E.1 Properties of the internal energy	104	(a) Ideal solutions	150	5F.3 The activities of regular solutions	189
Checklist of concepts	64	(a) The Maxwell relations	105	(b) Ideal–dilute solutions	151	5F.4 The activities of ions	190
Checklist of equations	65	(b) The variation of internal energy with volume	106	Checklist of concepts	153	(a) Mean activity coefficients	190
TOPIC 2E Adiabatic changes	66	3E.2 Properties of the Gibbs energy	107	Checklist of equations	154	(b) The Debye–Hückel limiting law	191
2E.1 The change in temperature	66	(a) General considerations	107	TOPIC 5B The properties of solutions	155	(c) Extensions of the limiting law	192
2E.2 The change in pressure	67	(b) The variation of the Gibbs energy with temperature	108	5B.1 Liquid mixtures	155	Checklist of concepts	193
Checklist of concepts	68	(c) The variation of the Gibbs energy of condensed phases with pressure	109	(a) Ideal solutions	155	Checklist of equations	193
Checklist of equations	68	(d) The variation of the Gibbs energy of gases with pressure	109	(b) Excess functions and regular solutions	156	FOCUS 6 Chemical equilibrium	205
FOCUS 3 The Second and Third Laws	75	Checklist of concepts	110	5B.2 Colligative properties	158	TOPIC 6A The equilibrium constant	206
TOPIC 3A Entropy	76	Checklist of equations	111	(a) The common features of colligative properties	158	6A.1 The Gibbs energy minimum	206
3A.1 The Second Law	76	FOCUS 4 Physical transformations of pure substances	119	(b) The elevation of boiling point	159	(a) The reaction Gibbs energy	206
3A.2 The definition of entropy	78	TOPIC 4A Phase diagrams of pure substances	120	(c) The depression of freezing point	161	(b) Exergonic and endergonic reactions	207
(a) The thermodynamic definition of entropy	78	4A.1 The stabilities of phases	120	(d) Solubility	161	6A.2 The description of equilibrium	207
(b) The statistical definition of entropy	79	(a) The number of phases	120	(e) Osmosis	162	(a) Perfect gas equilibria	208
3A.3 The entropy as a state function	80	(b) Phase transitions	121	Checklist of concepts	165	(b) The general case of a reaction	209
(a) The Carnot cycle	81	(c) Thermodynamic criteria of phase stability	121	Checklist of equations	165	(c) The relation between equilibrium constants	211
(b) The thermodynamic temperature	83	4A.2 Coexistence curves	122	TOPIC 5C Phase diagrams of binary systems: liquids	166	(d) Molecular interpretation of the equilibrium constant	212
(c) The Clausius inequality	84	(a) Characteristic properties related to phase transitions	122	5C.1 Vapour pressure diagrams	166	Checklist of concepts	213
Checklist of concepts	85	(b) The phase rule	123	5C.2 Temperature–composition diagrams	168	Checklist of equations	213
Checklist of equations	85	4A.3 Three representative phase diagrams	125	(a) The construction of the diagrams	168	TOPIC 6B The response of equilibria to the conditions	214
TOPIC 3B Entropy changes accompanying specific processes	86	(a) Carbon dioxide	125	(b) The interpretation of the diagrams	169	6B.1 The response to pressure	214
3B.1 Expansion	86	(b) Water	125	5C.3 Distillation	170	6B.2 The response to temperature	216
3B.2 Phase transitions	87	(c) Helium	126	(a) Fractional distillation	170	(a) The van 't Hoff equation	216
3B.3 Heating	88	Checklist of concepts	127	(b) Azeotropes	171	(b) The value of K at different temperatures	217
3B.4 Composite processes	89	Checklist of equations	127	(c) Immiscible liquids	172	Checklist of concepts	218
Checklist of concepts	90	TOPIC 4B Thermodynamic aspects of phase transitions	128	5C.4 Liquid–liquid phase diagrams	172	Checklist of equations	218
Checklist of equations	90	4B.1 The dependence of stability on the conditions	128	(a) Phase separation	173	TOPIC 6C Electrochemical cells	219
TOPIC 3C The measurement of entropy	91	(a) The temperature dependence of phase stability	128	(b) Critical solution temperatures	174	6C.1 Half-reactions and electrodes	219
3C.1 The calorimetric measurement of entropy	91	(b) The response of melting to applied pressure	129	(c) The distillation of partially miscible liquids	175	6C.2 Varieties of cell	220
3C.2 The Third Law	92	(c) The vapour pressure of a liquid subjected to pressure	130	Checklist of concepts	177	(a) Liquid junction potentials	220
(a) The Nernst heat theorem	92	4B.2 The location of coexistence curves	131	Checklist of equations	177	(b) Notation	221
(b) Third-Law entropies	93	(a) The slopes of the coexistence curves	131	TOPIC 5D Phase diagrams of binary systems: solids	178	6C.3 The cell potential	221
(c) The temperature dependence of reaction entropy	94	(b) The solid–liquid coexistence curve	132	5D.1 Eutectics	178	(a) The Nernst equation	222
Checklist of concepts	95	(c) The liquid–vapour coexistence curve	132	5D.2 Reacting systems	180	(b) Cells at equilibrium	223
Checklist of equations	95	(d) The solid–vapour coexistence curve	134	5D.3 Incongruent melting	180	6C.4 The determination of thermodynamic functions	224
TOPIC 3D Concentrating on the system	96	Checklist of concepts	134	Checklist of concepts	181	Checklist of concepts	225
3D.1 The Helmholtz and Gibbs energies	96	Checklist of equations	135	Checklist of equations	177	Checklist of equations	225
(a) Criteria of spontaneity	96	FOCUS 5 Simple mixtures	141	TOPIC 5E Phase diagrams of ternary systems	182	TOPIC 6D Electrode potentials	226
(b) Some remarks on the Helmholtz energy	97	TOPIC 5A The thermodynamic description of mixtures	143	5E.1 Triangular phase diagrams	182	6D.1 Standard potentials	226
(c) Maximum work	97	5A.1 Partial molar quantities	143	5E.2 Ternary systems	183	(a) The measurement procedure	227
(d) Some remarks on the Gibbs energy	99	(a) Partial molar volume	143	(a) Partially miscible liquids	183	(b) Combining measured values	228
(e) Maximum non-expansion work	99	(b) Partial molar Gibbs energies	145	(b) Ternary solids	184	6D.2 Applications of standard electrode potentials	228
3D.2 Standard molar Gibbs energies	100	(c) The Gibbs–Duhem equation	146	Checklist of concepts	185	(a) The electrochemical series	228
(a) Gibbs energies of formation	100	5A.2 The thermodynamics of mixing	147	TOPIC 5F Activities	186	(b) The determination of activity coefficients	229
(b) The Born equation	101	(a) The Gibbs energy of mixing of perfect gases	148	5F.1 The solvent activity	186	(c) The determination of equilibrium constants	229
Checklist of concepts	102	(b) Other thermodynamic mixing functions	149	5F.2 The solute activity	187	Checklist of concepts	230
Checklist of equations	103			(a) Ideal–dilute solutions	187	Checklist of equations	230
				(b) Real solutes	187		

FOCUS 7 Quantum theory	237	Checklist of concepts	282	Checklist of concepts	338	(c) Density functional theory	381
TOPIC 7A The origins of quantum mechanics	239	Checklist of equations	282	Checklist of equations	338	(d) Practical calculations	381
7A.1 Energy quantization	239	TOPIC 7F Rotational motion	283	FOCUS 9 Molecular structure	343	(e) Graphical representations	381
(a) Black-body radiation	239	7F.1 Rotation in two dimensions	283	PROLOGUE The Born–Oppenheimer approximation	345	Checklist of concepts	382
(b) Heat capacity	242	(a) The solutions of the Schrödinger equation	284	TOPIC 9A Valence-bond theory	346	Checklist of equations	382
(c) Atomic and molecular spectra	243	(b) Quantization of angular momentum	285	9A.1 Diatomic molecules	346	TOPIC 9F Computational chemistry	383
7A.2 Wave–particle duality	244	7F.2 Rotation in three dimensions	286	(a) Promotion	349	9F.1 The central challenge	383
(a) The particle character of electromagnetic radiation	244	(a) The wavefunctions and energy levels	286	(b) Hybridization	350	9F.2 The Hartree–Fock formalism	384
(b) The wave character of particles	246	(b) Angular momentum	289	Checklist of concepts	352	9F.3 The Roothaan equations	385
Checklist of concepts	247	(c) The vector model	290	Checklist of equations	352	9F.4 Evaluation and approximation of the integrals	386
Checklist of equations	247	Checklist of concepts	291	TOPIC 9B Molecular orbital theory: the hydrogen molecule-ion	353	9F.5 Density functional theory	388
TOPIC 7B Wavefunctions	248	Checklist of equations	292	9B.1 Linear combinations of atomic orbitals	353	Checklist of concepts	389
7B.1 The Schrödinger equation	248	FOCUS 8 Atomic structure and spectra	305	(a) The construction of linear combinations	353	Checklist of equations	390
7B.2 The Born interpretation	248	TOPIC 8A Hydrogenic atoms	306	(b) Bonding orbitals	354	FOCUS 10 Molecular symmetry	397
(a) Normalization	250	8A.1 The structure of hydrogenic atoms	306	(c) Antibonding orbitals	356	TOPIC 10A Shape and symmetry	398
(b) Constraints on the wavefunction	251	(a) The separation of variables	306	9B.2 Orbital notation	358	10A.1 Symmetry operations and symmetry elements	398
(c) Quantization	251	(b) The radial solutions	307	Checklist of concepts	358	10A.2 The symmetry classification of molecules	400
Checklist of concepts	252	8A.2 Atomic orbitals and their energies	309	Checklist of equations	358	(a) The groups C_v , $C_{\infty v}$ and C_s	402
Checklist of equations	252	(a) The specification of orbitals	310	TOPIC 9C Molecular orbital theory: homonuclear diatomic molecules	359	(b) The groups C_{nv} , C_{nh} and $C_{\infty h}$	402
TOPIC 7C Operators and observables	253	(b) The energy levels	310	9C.1 Electron configurations	359	(c) The groups D_{nh} , D_{nd} and $D_{\infty d}$	403
7C.1 Operators	253	(c) Ionization energies	311	(a) MO energy level diagrams	359	(d) The groups S_n	403
(a) Eigenvalue equations	253	(d) Shells and subshells	311	(b) σ Orbitals and π orbitals	360	(e) The cubic groups	403
(b) The construction of operators	254	(e) s Orbitals	312	(c) The overlap integral	361	(f) The full rotation group	404
(c) Hermitian operators	255	(f) Radial distribution functions	313	(d) Period 2 diatomic molecules	362	10A.3 Some immediate consequences of symmetry	404
(d) Orthogonality	256	(g) p Orbitals	315	9C.2 Photoelectron spectroscopy	364	(a) Polarity	404
7C.2 Superpositions and expectation values	257	(h) d Orbitals	316	Checklist of concepts	365	(b) Chirality	405
7C.3 The uncertainty principle	259	Checklist of concepts	316	Checklist of equations	365	Checklist of concepts	406
7C.4 The postulates of quantum mechanics	261	Checklist of equations	317	TOPIC 9D Molecular orbital theory: heteronuclear diatomic molecules	366	Checklist of symmetry operations and elements	406
Checklist of concepts	261	TOPIC 8B Many-electron atoms	318	9D.1 Polar bonds and electronegativity	366	TOPIC 10B Group theory	407
Checklist of equations	262	8B.1 The orbital approximation	318	9D.2 The variation principle	367	10B.1 The elements of group theory	407
TOPIC 7D Translational motion	263	8B.2 The Pauli exclusion principle	319	(a) The procedure	368	10B.2 Matrix representations	409
7D.1 Free motion in one dimension	263	(a) Spin	319	(b) The features of the solutions	370	(a) Representatives of operations	409
7D.2 Confined motion in one dimension	264	(b) The Pauli principle	320	Checklist of concepts	372	(b) The representation of a group	409
(a) The acceptable solutions	264	8B.3 The building-up principle	322	Checklist of equations	372	(c) Irreducible representations	410
(b) The properties of the wavefunctions	265	(a) Penetration and shielding	322	TOPIC 9E Molecular orbital theory: polyatomic molecules	373	(d) Characters	411
(c) The properties of the energy	266	(b) Hund's rules	323	9E.1 The Hückel approximation	373	10B.3 Character tables	412
7D.3 Confined motion in two and more dimensions	268	(c) Atomic and ionic radii	325	(a) An introduction to the method	373	(a) The symmetry species of atomic orbitals	413
(a) Energy levels and wavefunctions	268	(d) Ionization energies and electron affinities	326	(b) The matrix formulation of the method	374	(b) The symmetry species of linear combinations of orbitals	413
(b) Degeneracy	270	8B.4 Self-consistent field orbitals	327	9E.2 Applications	376	(c) Character tables and degeneracy	414
7D.4 Tunnelling	271	Checklist of concepts	328	(a) π -Electron binding energy	376	Checklist of concepts	415
Checklist of concepts	273	Checklist of equations	328	(b) Aromatic stability	378	Checklist of equations	416
Checklist of equations	274	TOPIC 8C Atomic spectra	329	9E.3 Computational chemistry	379	TOPIC 10C Applications of symmetry	417
TOPIC 7E Vibrational motion	275	8C.1 The spectra of hydrogenic atoms	329	(a) Basis functions and basis sets	379	10C.1 Vanishing integrals	417
7E.1 The harmonic oscillator	275	8C.2 The spectra of many-electron atoms	330	(b) Electron correlation	380	(a) Integrals of the product of functions	418
(a) The energy levels	276	(a) Singlet and triplet terms	330	TOPIC 9F Molecular orbital theory: polyatomic molecules	380	(b) Decomposition of a representation	419
(b) The wavefunctions	276	(b) Spin–orbit coupling	331	9F.1 The central challenge	383	10C.2 Applications to molecular orbital theory	420
7E.2 Properties of the harmonic oscillator	279	(c) Term symbols	334	(a) The central challenge	383	(a) Orbital overlap	420
(a) Mean values	279	(d) Hund's rules and term symbols	337	(b) The Hartree–Fock formalism	384	(b) Symmetry-adapted linear combinations	421
(b) Tunnelling	280	(e) Selection rules	337	(c) The Roothaan equations	385	10C.3 Selection rules	422
				(d) Evaluation and approximation of the integrals	386	Checklist of concepts	423
				(e) Density functional theory	388	Checklist of equations	423

FOCUS 11 Molecular spectroscopy	427	TOPIC 11E Symmetry analysis of vibrational spectra	466	TOPIC 12C Pulse techniques in NMR	521	TOPIC 13D The canonical ensemble	567
