

Contents

| | | |
|----------|--|----|
| 1 | Introduction | 1 |
| 1.1 | General Notes | 1 |
| 1.2 | Historical Notes | 3 |
| 1.3 | Brief Overview of the Content | 6 |
| 1.4 | Basic Equations for Investigation of Surface Flute Waves | 11 |
| 1.4.1 | Electromagnetic Wave Field Distribution in Plasmas | 11 |
| 1.4.2 | Electromagnetic Wave Field Distribution in Dielectrics | 13 |
| 1.4.3 | Electromagnetic Wave Field Distribution in Layers Where an Electron Beam Gyrate | 14 |
| 1.4.4 | Boundary Conditions | 15 |
| | References | 16 |
| 2 | Surface Flute Waves in Uniform Magneto-active Plasma Filled Waveguides | 19 |
| 2.1 | Extraordinary Polarized Surface Flute Waves in Magneto-active Plasma Waveguides | 20 |
| 2.2 | Extraordinary Polarized Surface Flute Waves Propagating Along Magneto-active Plasma-Metal Interface | 24 |
| 2.3 | Surface Flute Waves in Strongly Magnetized Plasma Waveguides | 29 |
| 2.4 | Ordinary Polarized Electromagnetic Flute Waves | 31 |
| 2.5 | Damping of Surface Flute X-Modes | 35 |
| 2.6 | Long-Wavelength Azimuthally Non-symmetrical Surface Waves | 40 |
| 2.7 | Higher Radial Modes of Surface Flute Waves in Magneto-active Cylindrical Plasma Waveguides | 46 |
| 2.8 | Conclusions | 52 |
| | References | 52 |

| | | |
|----------|---|-----|
| 3 | Electromagnetic Energy Rotation Caused by Surface Flute Waves | 55 |
| 3.1 | Electromagnetic Energy Rotation Along Plasma-Metal Interface in Cylindrical Waveguides | 56 |
| 3.2 | Electromagnetic Energy Rotation Around a Cylindrical Metallic Rod in Magneto-active Plasmas | 68 |
| 3.3 | Rotation of Electromagnetic Energy in Coaxial Metal Waveguides Entirely Filled by Plasmas | 76 |
| 3.4 | Rotation of Electromagnetic Energy in Cylindrical Metal Waveguides Partially Filled by Magneto-active Plasmas | 85 |
| 3.5 | Conclusions | 95 |
| | References | 96 |
| 4 | Coupled Surface Flute Waves in Current-Carrying Plasma Waveguides | 99 |
| 4.1 | Coupled Surface Flute Waves in Azimuthal Static Magnetic Fields | 99 |
| 4.2 | Coupled Surface Flute Waves in the Range of Electron Cyclotron Frequency in Current-Carrying Waveguides Partially Filled with Plasmas | 102 |
| 4.3 | Coupled Surface Flute Waves Propagating Above the Upper-Hybrid Frequency Around a Current-Carrying Cylindrical Metal Rod in Magnetized Plasmas | 106 |
| 4.4 | Coupled Surface Flute Waves Propagating Above the Upper-Hybrid Frequency in Waveguides Entirely Filled with Current-Carrying Plasmas | 112 |
| 4.5 | Coupled High Frequency Surface Flute Waves in Coaxial Waveguides Entirely Filled with Current-Carrying Plasmas | 119 |
| 4.6 | Conclusions | 125 |
| | References | 126 |
| 5 | Surface Flute Waves in Inhomogeneous Magnetized Plasma Waveguides | 127 |
| 5.1 | Surface Flute Waves in Waveguides Filled with Plasma Whose Particle Density is Non-uniform | 128 |
| 5.2 | Influence of Radial Non-uniformity of External Static Magnetic Field on Frequency Spectrum of Surface Flute Waves | 139 |
| 5.3 | Influence of Toroidal Magnetic Field Non-uniformity on Frequency Spectrum of Surface Flute Waves in Metal Waveguides Entirely Filled with Plasmas | 141 |
| 5.4 | Propagation of Surface Flute Waves Around a Metal Ring in Non-uniform Toroidal Magnetic Fields | 148 |
| 5.5 | Surface Flute Waves in Weakly Rippled Magnetic Fields | 151 |

| | | |
|----------|--|-----|
| 5.6 | Additional Electron Cyclotron Resonance Heating of Plasmas by Surface Flute Waves in Weakly Rippled External Static Magnetic Fields | 157 |
| 5.7 | Conclusions | 164 |
| | References | 166 |
| 6 | Surface Flute Waves in Waveguides with Non-circular Cross-Section | 169 |
| 6.1 | Surface Flute Waves in Corrugated Metal Waveguides Entirely Filled with Plasma | 172 |
| 6.2 | Surface Flute Waves in Square Metal Waveguides Entirely Filled with Plasma | 176 |
| 6.3 | Surface Flute Waves in Metal Waveguides with Non-circular Cross-Section, Partially Filled with a Circular Cross-Section Plasma Column | 180 |
| 6.4 | Low Frequency Surface Flute Waves in Metal Waveguides with Circular Cross-Section, Partially Filled with a Plasma Column of Non-circular Cross-Section | 181 |
| 6.5 | Resonant Influence of Plasma-Dielectric Interface Shape on Surface Flute Waves in Magneto-active Waveguides | 184 |
| 6.6 | High Frequency Surface Flute Waves in Metal Waveguides with Circular Cross-Section, Partially Filled with a Plasma Column of Non-circular Cross-Section | 186 |
| 6.7 | Conclusions | 195 |
| | References | 196 |
| 7 | Excitation of Surface Flute Waves in Electron Cyclotron Frequency Range by Relativistic Electron Beam Gyration Along Large Larmor Orbits | 199 |
| 7.1 | Linear Theory of Surface Flute Wave Excitation by Electron Beams Gyration Around a Plasma Column | 201 |
| 7.2 | Excitation of Higher Radial Modes of Surface Flute Waves | 213 |
| 7.3 | Two Mechanisms of Resonance Overlapping in Excitation of Surface Flute Waves by Rotating Relativistic Electron Beams | 223 |
| 7.4 | Excitation of Surface Flute Waves by Electron Beams in Toroidal Waveguides | 234 |
| 7.5 | Excitation of Surface Flute Waves in Cylindrical Waveguides with Non-circular Cross-Section of Plasma Filling | 245 |
| 7.6 | Transition Between Beam-Plasma and Beam-Dissipative Instability Regimes in Interaction of Relativistic Large Larmor Orbit Electron Beams and Surface Flute X-Modes | 252 |
| 7.7 | Initial Stage of Interaction Between Gyration Relativistic Electron Beams and Long-Wavelength Electromagnetic Surface Waves | 256 |

| | | |
|-----------|--|------------|
| 7.8 | Conclusions | 266 |
| | References | 268 |
| 8 | Excitation of Surface Flute Waves by Electron Beams Gyrating Along Large Larmor Orbits in Coaxial Waveguides | 273 |
| 8.1 | Excitation of Surface Flute Waves in the Electron Cyclotron Frequency Range by an Electron Beam Gyating Around a Coaxial Plasma Layer | 276 |
| 8.2 | Excitation of Surface Flute Waves in the Electron Cyclotron Frequency Range by an Electron Beam Gyating Around the Inner Conductor Inside a Coaxial Plasma Layer | 284 |
| 8.3 | Excitation of Surface Flute Waves Above the Upper-Hybrid Frequency by an External Beam of Relativistic Electrons | 290 |
| 8.4 | Excitation of Surface Flute Waves Above the Upper-Hybrid Frequency by an Internal Gyating Electron Beam | 297 |
| 8.5 | Conclusions | 306 |
| | References | 307 |
| 9 | Nonlinear Theory of Surface Flute Wave Excitation in Electron Cyclotron Frequency Range | 311 |
| 9.1 | Nonlinear Theory of Surface Flute Wave Excitation by Electron Beams Gyating Around a Plasma Column Under Condition of Resonant Beam-Plasma Instability | 312 |
| 9.2 | Nonlinear Theory of Surface Flute Wave Excitation by Electron Beams Gyating Around a Plasma Column Under Condition of Beam-Dissipative Instability | 319 |
| 9.3 | Nonlinear Theory of Surface Flute Wave Excitation by Modulated Annular Electron Beams | 322 |
| 9.4 | Conclusions | 332 |
| | References | 333 |
| 10 | Excitation of Surface Flute Waves with Frequencies Other Than Electron Cyclotron Frequency by Flow of Charged Particles Gyating Along Large Larmor Orbits in Axial External Static Magnetic Field | 335 |
| 10.1 | Excitation of Surface Flute Waves Above Upper Hybrid Frequency by Electron Beams Gyating Around a Plasma Column | 336 |
| 10.2 | Excitation of Surface Flute Waves Above Upper Hybrid Frequency by Annular Electron Beam in Waveguide with Non-circular Cross-Section of Plasma Column | 343 |
| 10.3 | Transition Between Beam-Plasma and Beam-Dissipative Instability Regimes in Interaction of Relativistic Large Larmor Orbit Electron Beams and Surface Flute Waves Above Upper-Hybrid Frequency in Coaxial Plasma Waveguides | 350 |

| | | |
|--------------------|---|------------|
| 10.4 | Excitation of Surface Flute Waves in Ion Cyclotron Frequency Range by Light Ion Beams Gyating Around a Plasma Column in Strongly Magnetized Plasma Waveguides | 356 |
| 10.5 | Conclusions | 362 |
| | References | 363 |
| 11 | Applications of Surface Wave Propagation | 367 |
| 11.1 | Surface Wave Applications for Plasma Electronics | 367 |
| 11.2 | Surface Wave Applications for Plasma-Antenna Systems | 379 |
| 11.3 | Surface Waves Propagating in the Plasma Periphery of Magnetic Confinement Fusion Devices | 389 |
| 11.4 | Surface Wave Applications in Nano-Technologies | 394 |
| 11.5 | Surface Wave Applications for Plasma Production | 404 |
