

Contents

1	Introduction	1
2	Definition of Life	7
2.1	Problems with Common Assumptions About the Nature of Life	8
2.2	Historical Views on the Definition of Life	12
2.3	Modern Definitions of Life	13
2.4	Thermodynamic Criteria	14
2.5	Reproducibility Criteria	15
2.6	Evolutionary Criteria	16
2.7	Life as a Global Entity	17
2.8	Artificial Life	17
2.8.1	Synthetic Life (“Wetware”)	18
2.8.2	Virtual Life (“Software”)	18
2.8.3	Mechanical Life (“Hardware”)	18
2.9	A Utilitarian and Generic View	19
2.9.1	Self-Sustaining and Bounded Environments in Thermodynamic Disequilibrium	19
2.9.2	Transformation of Energy to Maintain a Low Entropy State, Adjust to Change, and Perform Work	21
2.9.3	Information Encoding and Transmission	23
2.10	Implications for the Remote Detection of Life	24
2.11	Chapter Summary	25
3	Origin of Life	27
3.1	Scenarios for the Origin of Life	27
3.1.1	A Lukewarm Marine Origin of Life	29
3.1.2	A Benthic Thermophilic Origin of Life	30
3.1.3	An Ice Water Origin of Life	31
3.1.4	A Comprehensive Scenario for the Origin of Life	32

3.2	Minimum Requirements for the Origin of Life	35
3.2.1	Insights into the Origin of the First Cellular Membranes	36
3.2.2	Insights into the Origin of the First Metabolism	37
3.2.3	Insights into the Origin of the First Replication Mechanism	39
3.3	Other Insights and Inferences	41
3.3.1	Size	41
3.3.2	Environmental Conditions	42
3.3.3	Medium	43
3.3.4	Minerals and Substrates	44
3.3.5	Implications for the Possibility of Life on Other Worlds	45
3.4	Synthetic Life	46
3.4.1	The Standard Genetic Code	46
3.4.2	The Flexibility of the Code and Non-canonical Amino Acids	48
3.4.3	Bottom-Up and Top-Down Approaches to the Origin of Life	49
3.5	Chapter Summary	50
4	Lessons from the History of Life on Earth	51
4.1	A Brief History of Life on Earth	51
4.2	Lessons from the History of Life on Earth	53
4.2.1	Life Arises Relatively Quickly Under Conducive Conditions	53
4.2.2	Life Tends to Stay Small and Simple	54
4.2.3	Most Organisms Remain Relatively Unchanged over Their Evolutionary Life Spans	55
4.2.4	Evolution Is Accelerated by Environmental Changes	57
4.2.5	Complexity Inevitably Increases but as the Exception Rather than the Rule	58
4.2.6	Biodiversity Is Promoted by Heterogeneous Environments	59
4.2.7	Individuals Are Fragile, But Life Is Hardy	60
4.3	Adaptations to Extreme Environments	61
4.3.1	Temperature Extremes	61
4.3.2	Extreme pH-Conditions	65
4.3.3	Low Availability of Water	66
4.3.4	Low Oxygen Availability	68
4.3.5	Pressure	69
4.3.6	Radiation	70
4.3.7	Low Nutrient Availability and Chemical Extremes	71

4.4	Questions Unanswered by the History of Life on Earth	72
4.5	Chapter Summary	73
5	Energy Sources and Life	75
5.1	Life as We Know It	75
5.1.1	Oxidation-Reduction Chemistry as an Energy Source for Life	76
5.1.2	Light as an Energy Source for Life	79
5.2	Life as We Don't Know It	79
5.2.1	Electromagnetic Waves (Other than Visible Light)	80
5.2.2	Thermal Energy	81
5.2.3	Kinetic Energy	84
5.2.4	Osmotic or Ionic Gradients	85
5.2.5	Magnetic Fields	88
5.2.6	Gravitational Forces	92
5.2.7	Tectonic Stress	93
5.2.8	Pressure Gradients	94
5.2.9	Spin Configurations	94
5.2.10	Radioactivity	96
5.3	The Question of Entropy, Uniformity, and Origin	97
5.4	Survey of Energy Sources in our Solar System	98
5.5	Chapter Summary	100
6	Building Blocks of Life	101
6.1	The Uniqueness of Carbon	101
6.2	An Alien Carbon Biochemistry?	105
6.3	Alternatives to Carbon as the Universal Building Block of Life	106
6.4	The Possibility of Silicon-Based Life	107
6.4.1	Physical Properties of Silicon	107
6.4.2	Role of Silicon for Life on Earth	110
6.4.3	Polymeric Chemistry of Silicon	112
6.4.4	Environmental Conditions for the Possibility of Silicon-Based Life	114
6.5	Other Alternatives as Building Blocks of Life	119
6.6	Chapter Summary	121
7	Life and the Need for a Solvent	123
7.1	Water as the Universal Solvent for Life on Earth	125
7.2	Inorganic Polar Solvents as Alternatives to Water	130
7.2.1	Ammonia	131
7.2.2	Hydrocyanic Acid	134
7.2.3	Hydrofluoric Acid	136
7.2.4	Hydrogen Sulfide, Sulfur Dioxide and Sulfuric Acid	136
7.2.5	Hydrogen Peroxide	137
7.2.6	Hydrazine	139

7.3	Other Solvents as Alternatives to Water	139
7.3.1	Inorganic Non-Polar Compounds	139
7.3.2	Organic Polar Compounds	140
7.3.3	Organic Non-Polar Compounds	141
7.3.4	Supercritical Fluids: Carbon Dioxide	143
7.4	Quantitative Assessment of Solvent Candidates	144
7.5	Some Additional Thoughts	146
7.6	Chapter Summary	147
8	Habitats of Life	149
8.1	Life on the Surface	149
8.2	Life Beneath the Surface	150
8.3	Life in the Atmosphere	153
8.4	Life in the Space Environment	157
8.5	Cosmic Biogeography	159
8.6	Chapter Summary	163
9	Signatures of Life	165
9.1	Searching for Signatures of Life	166
9.1.1	Atmospheric Composition of a Planetary Body	166
9.1.2	Geological Evidence	168
9.1.3	Fossil and Isotopic Evidence	169
9.1.4	Macromolecules and Chirality	170
9.1.5	Presence of Metabolic By-Products and End-Products	171
9.1.6	Production of Biogenic Heat	172
9.1.7	Signatures of More Advanced Life	173
9.2	Geoindicators of Life	173
9.2.1	Presence of an Atmosphere or Ice Shield	174
9.2.2	Internal Differentiation	175
9.2.3	Polymeric Chemistry	175
9.2.4	Energy Source	176
9.2.5	Liquid Medium	178
9.3	Geoindicators for Life in our Solar System	179
9.4	Chapter Summary	181
10	Life Detection: Past and Present	183
10.1	The Viking Mission	183
10.1.1	The Viking Landers	183
10.1.2	Mission Preparation	185
10.1.3	Mission Results	186
10.1.4	Interpretation of Mission Results	188
10.2	Martian Meteorites and Evidence for Ancient Life	192
10.2.1	The Claim of Fossilized Life in Martian Meteorite ALH84001	193
10.2.2	A Cold Reception by the Scientific Community	195

10.2.3	Signs of Ancient Life in Another Martian Meteorite?	199
10.2.4	Conclusions Concerning Biomarkers in Martian Meteorites	199
10.3	Current Life Detection Instrumentation	200
10.4	Chapter Summary	202
11	Astrobiological Potential of Planetary Bodies Within the Solar System	203
11.1	Terrestrial Planets	203
11.1.1	Mercury	203
11.1.2	Venus	204
11.1.3	The Earth-Moon System	205
11.1.4	Mars	207
11.1.5	Ceres	209
11.2	Outer Solar System	210
11.2.1	Gas and Ice Giants	210
11.2.2	Io	212
11.2.3	Europa	212
11.2.4	Ganymede and Callisto	215
11.2.5	Enceladus	215
11.2.6	Titan	217
11.2.7	Triton	220
11.2.8	Dwarf Planets of the Outer Solar System	221
11.3	Small Bodies	223
11.3.1	Asteroids	223
11.3.2	Comets	224
11.4	Metrics for the Plausibility of Life in the Solar System	224
11.5	Chapter Summary	227
12	Exoplanets and Exomoons	229
12.1	Methods for Detecting Planetary Bodies Outside the Solar System	229
12.1.1	Radial Velocity	230
12.1.2	Transit Photometry	230
12.1.3	Astrometry	230
12.2	Detection Limits, or What We Know Now and What We Need to Learn	231
12.2.1	The One-Pixel Problem	231
12.2.2	Technologies Becoming Available in the Near Future	232
12.2.3	An Outlook of What Might Be Possible in the Next Decades	233
12.3	Taxonomy of Exoplanets	236
12.3.1	General Categorization of Exoplanets	236
12.3.2	Categorization of Earth-size Exoplanets	237

12.4	Examples of Some Intriguing Exoplanets	239
12.4.1	Proxima b	240
12.4.2	Kepler 452b	240
12.4.3	Kapteyn b	241
12.5	Extrasolar Moons	241
12.6	Habitability Metrics	242
12.6.1	Habitat Suitability Index	242
12.6.2	Earth Similarity Index (ESI)	243
12.6.3	Planetary Habitability Index (PHI)	244
12.6.4	Biological Complexity Index (BCI)	245
12.7	Chapter Summary	245
13	Ideas of Exotic Forms of Life	247
13.1	Life Based on Spin Configurations	247
13.2	Fred Hoyle's Black Cloud and Similar Ideas	249
13.3	Life on a Neutron Star	250
13.4	Life on a Brown Dwarf	250
13.5	Life on a Rogue Planet	251
13.6	Some Other Ideas on Forms of Exotic Life	252
13.7	Chapter Summary	252
14	The Future and Fate of Living Systems	255
14.1	Evolutionary Alternatives	255
14.1.1	Plateau	256
14.1.2	Collapse	257
14.1.3	Transition	258
14.2	Evolution of Intelligence	259
14.3	The Rise of Technological Competence and Its Fate	260
14.4	Application to the Possibility of Life on Other Worlds	262
14.5	Chapter Summary	263
15	The Search for Extraterrestrial Intelligent Life	265
15.1	Traditional SETI	265
15.2	Optical SETI	267
15.3	The Search for Extraterrestrial Artifacts (SETA)	268
15.4	False Positives, or How Do We Know a Signal Is Coming from ETI?	268
15.5	The Wow! Signal	269
15.6	Messaging to Extraterrestrial Intelligence (METI)	270
15.7	The Fermi Paradox	272
15.8	Chapter Summary	273
16	Optimizing Space Exploration	275
16.1	Mars	276
16.1.1	Robotic Missions to Mars	277
16.1.2	Human Missions to Mars	278
16.1.3	A Vision for Mars Exploration	279

16.2	The Moon	281
16.3	Venus	282
16.4	Other Exploration Targets	282
16.5	Planetary Protection Considerations	285
16.6	Chapter Summary	286
References	287
Index	333
