

Contents

1	Fundamentals of Optics and Plasma Physics	1
1.1	Basic Principles of Optics and Description of Light Waves.....	1
1.1.1	Vacuum Propagation of Light; The Paraxial Wave Equation	1
1.1.2	Fourier Optics.....	4
1.2	Basic Principles of Plasma Physics.....	7
1.2.1	The Plasma State; Debye Length and Screening.....	7
1.2.2	The Plasma Frequency	10
1.2.3	Equilibrium (Maxwellian) Velocity Distributions in Plasmas	11
1.2.4	Kinetic (Vlasov) and Fluid Descriptions of Plasmas	14
1.3	Waves in Plasmas.....	18
1.3.1	Fluid Description: Dielectric Framework	18
1.3.2	Rapid Derivation of the Wave Equations; Acoustic Waves in the Presence of Background Flow	30
1.3.3	Kinetic Description of Plasma Waves	32
1.3.4	Landau Damping	36
1.3.5	Wave Energy and Action	41
1.3.6	Ion Acoustic Waves in Multi-Species Plasma.....	46
1.4	Electron-Ion Collisions	51
1.4.1	Single Electron-Ion Coulomb Collision	52
1.4.2	Momentum Loss for a Single Electron Interacting with a Background of Ions	54
1.4.3	Momentum Loss for a Drifting Maxwellian Distribution of Electrons Interacting with Ions	56
1.5	Isothermal Expansion of Plasma in Vacuum (and Ion Acceleration) in 1D	58
	Problems	62
	References.....	63

2	Single Particle Dynamics in Light Waves and Plasma Waves	65
2.1	Particle Dynamics in a Uniform Light Wave	66
2.2	Particle Dynamics in a Uniform Plasma Wave	70
2.2.1	Phase-Space Analysis: Analogy with the Simple Pendulum	70
2.2.2	Transit Time and Bounce Period of Passing and Trapped Particles	76
2.2.3	Wave-Particle Energy Conservation: Connection with Landau Damping	78
2.3	Particle Dynamics in a Non-uniform Light or Plasma Wave: The Ponderomotive Force	81
2.3.1	Ponderomotive Force from Plasma Waves	81
2.3.2	Ponderomotive Force from Light Waves	83
2.3.3	Beat Pattern Between Two Overlapped Waves	86
2.3.4	Connection Between the Ponderomotive Force and the Single Particle Motion in Uniform Light or Plasma Waves	89
	Problems	92
	References	93
3	Linear Propagation of Light Waves in Plasmas	95
3.1	The WKB Method	95
3.2	Airy Description at the Turning Point	99
3.2.1	Connection Between WKB and the Airy Description Up to the Turning Point	99
3.2.2	Field Evanescence Past the Turning Point	101
3.2.3	Regions of Validity	102
3.3	Oblique Incidence (s-Polarization)	103
3.4	Ray-Tracing	105
3.5	Frequency Shift of a Light Wave Reflecting Off an Expanding Density Profile	108
	Problems	109
	References	110
4	Absorption of Light Waves (and EPWs) in Plasmas	113
4.1	Ballistic Model of Collisional (or Inverse Bremsstrahlung) Absorption	113
4.1.1	Physical Picture	114
4.1.2	Low-Field Limit ($v_{os} \ll v_{Te}$)	116
4.1.3	High-Field Limit ($v_{os} \gg v_{Te}$)	121
4.2	Collisional Absorption from a Fluid Model: Dielectric Constant with Absorption	123
4.3	Collisional Heating Rate	125
4.4	Coulomb Logarithm	127
4.5	Collisional Damping of EPWs	129

4.6	Non-Maxwellian Electron Distributions from Collisional Heating: The Langdon Effect	131
4.7	Estimating Collisional Laser Absorption in Idealized Plasma Profiles	133
4.7.1	Laser Absorption at a Turning Point	133
4.7.2	Absorption in Isothermal 1D Density Profiles	135
4.8	Resonance Absorption of p-Polarized Light Waves	136
4.8.1	Physical Picture	136
4.8.2	Qualitative Analysis	139
	Problems	144
	References	146
5	Nonlinear Self-action Effects in Light Propagation in Plasmas	147
5.1	The Ponderomotive Force: Fluid Approach	147
5.2	Linear Plasma Response to a Laser's Ponderomotive Force: Transient Stage	151
5.3	Nonlinear Plasma Response to a Laser Ponderomotive Force in Steady-State	156
5.4	Plasma Response to a Ponderomotive Driver: Linear Kinetic Model	159
5.5	The Nonlinear Refractive Index of Plasmas	162
5.6	Self-Focusing	163
5.6.1	Geometric Optics Description	163
5.6.2	Wave Optics Description	166
5.7	Laser Beam Deflection in Flowing Plasmas	174
5.7.1	Physical Picture	174
5.7.2	Nonlinear Density Perturbation Displacement by Plasma Flow	175
5.7.3	Expression for the Beam Bending Rate	177
	Problems	181
	References	182
6	Introduction to Three-Wave Instabilities	183
6.1	Physical Picture	183
6.2	List of Possible Three-Wave Coupling in Plasma	185
6.3	Derivation of the Second-Order Coupled Mode Equations	187
6.3.1	Driven Light Wave Equation	189
6.3.2	Driven EPW Equation	190
6.3.3	Driven IAW Equation	191
6.4	General Concepts and Methods for Three Wave Coupling	192
6.4.1	The Slowly Varying Envelope Approximation	193
6.4.2	Coupled Equations with Wave Damping	194
6.4.3	Temporal Growth Rate	195
6.4.4	Spatial Amplification Rate and Definition of the Strongly Damped Regime of Instability	196

6.4.5	Instability Dispersion Relation.....	198
6.4.6	Conservation Laws in Three-Wave Coupling; The Manley–Rowe Relations	201
6.5	Spatial Amplification in a Non-Uniform Plasma: The Rosenbluth Gain Formula.....	203
6.5.1	Coupled Mode Equations in a Non-Uniform Plasma	203
6.5.2	Weakly Damped Waves	205
6.5.3	Strongly Damped Plasma Wave.....	208
6.6	Absolute vs. Convective Instabilities	211
6.6.1	Physical Picture.....	211
6.6.2	Green’s Function of the Three-Wave System	212
6.6.3	Convective and Absolute Growth Rates and Thresholds .	215
6.6.4	Final Remarks	217
	Problems	218
	References.....	219
7	Wave Coupling Instabilities via Ion Acoustic Waves	221
7.1	Stimulated Brillouin Scattering (SBS)	221
7.1.1	Phase-Matched Coupled Mode Equations and Temporal Growth Rate	222
7.1.2	Spatial Amplification in Uniform and Non-uniform Plasmas	224
7.1.3	Dispersion Relation: Strongly vs. Weakly Coupled Regimes	227
7.1.4	Mitigation of SBS Using Mixed-Species Plasmas	232
7.2	Crossed-Beam Energy Transfer (CBET).....	233
7.2.1	Introduction	233
7.2.2	Fluid Analysis	235
7.2.3	Kinetic Analysis	239
7.2.4	Electric Field Dephasing and Variation of the Refractive Index in Off-resonance CBET	240
7.2.5	Polarization Effects	243
7.3	The Filamentation Instability	250
7.3.1	Introduction	250
7.3.2	Dispersion Relation and Growth Rate	251
7.3.3	Weakly vs. Strongly Coupled Regimes of Filamentation.	254
7.3.4	Transition from Forward SBS to Filamentation.....	257
7.3.5	Physical Interpretation of the Filamentation Instability in Terms of Four-Wave-Mixing Phase-Matching Condition	259
7.3.6	Connection Between Self-focusing and Filamentation ...	260
7.3.7	Thermal Filamentation	261
	Problems	264
	References.....	265
