

13th International Workshop on
Plasma Edge Theory
in Fusion Devices

ORIGINAL PAPERS

1 PHYSICS AND CONTROL OF ELMS AND PEDESTAL

- Page **326–347** ——— I. Joseph
Edge-Localized Mode Control and Transport Generated by
Externally Applied Magnetic Perturbations
- Page **348–352** ——— J.R. Angus, M. Umansky, and S.I. Krasheninnikov
3D Blob Modelling with BOUT++
- Page **353–359** ——— T.Y. Xia, X.Q. Xu, B.D. Dudson, and J. Li
Nonlinear Simulations of Peeling-Ballooning Modes with Parallel
Velocity Perturbation
- Page **360–364** ——— A.A. Pshenov and D.Kh. Morozov
ELM as a Trigger Mechanism for the Transition Between Two Edge
Regimes
- Page **365–371** ——— G. Kagan, K.D. Marr, I. Pusztai, M. Landreman, P.J. Catto, and B. Lipschultz
Neoclassical Theory of Pedestal Flows and Comparison with Alcator
C-Mod Measurements

2 INTEGRATED CORE-EDGE-DIVERTOR MODELING

- Page **372–378** ——— M. Yagi, K. Shimizu, T. Takizuka, M. Honda, N. Hayashi, K. Hoshino, and A.
Fukuyama
Simulation Study of L/H Transition with Self-Consistent Integrated
Modelling of Core and SOL/Divertor Transport

- Page **379–383** — R. Zagórski, R. Neu, and ASDEX Upgrade Team
Integrated Modelling of ASDEX Upgrade Nitrogen Seeded Discharges
- Page **384–390** — H. Seto and A. Fukuyama
Formulation of Two-Dimensional Transport in Tokamak Plasmas for Integrated Analysis of Core and Edge Plasmas

3 FLUCTUATIONS AND EDGE TURBULENCE

- Page **391–400** — V. Naulin, G. Xu, N. Vianello, J. Madsen, R. Schrittwieser, C. Ionita, C. Maszl, F. Mehlmann, N. Yan, A.H. Nielsen, and J.J. Rasmussen
Profiles and Fluctuations in Edge and SOL Turbulence
- Page **401–405** — E. Serre, H. Bufferand, A. Paredes, F. Schwander, G. Ciraolo, Ph. Ghendrih, and P. Tamain
Numerical Modeling of the Impact of Geometry and Wall Components on Transport in the Tokamak Edge
- Page **406–411** — T. Kiviniemi, S. Leerink, J.A. Heikkinen, S. Janhunen, and T. Korpilo
Gyrokinetic Simulations of the Edge Pedestal in the TEXTOR Tokamak
- Page **412–416** — B. Friedman, M.V. Umansky, and T.A. Carter
Grid Convergence Study in a Simulation of LAPD Turbulence
- Page **417–423** — M.V. Umansky, D. Brunner, B. LaBombard, and T.D. Rognlien
Modeling of Local Edge Plasma Perturbations Induced by a Biased Probe
- Page **424–428** — H. Tanaka, N. Ohno, Y. Tsuji, K. Okazaki, and S. Kajita
Statistical Analysis of the Spatial Behavior of Plasma Blobs Around the Plasma Column in a Linear Plasma Device

4 IMPURITY AND NEUTRAL PARTICLES AND RADIATION

- Page **429–434** — J. Rosato, A. Mekkaoui, Y. Marandet, D. Reiter, V. Kotov, H. Capes, L. Godbert-Mouret, M. Koubiti, and R. Stamm
Modeling of Radiation Transport in Fluctuating Edge Plasmas: A Statistical Approach
- Page **435–439** — R.D. Smirnov, S.I. Krasheninnikov, A. Yu. Pigarov, T.D. Rognlien, D.K. Mansfield, C.H. Skinner, and A.L. Roquemore
Impurity Seeding with Dust Injection in Tokamak Edge Plasmas

- Page **440–444** — R.C. Wieggers, P.W.C. Groen, H.J. de Blank, and W. J. Goedheer
Simulation of the Neutral Inventory in the Pilot-PSI Beam
- Page **445–449** — A. Mekkaoui, Y. Marandet, J. Rosato, H. Capes, R. Stamm, M. Koubiti, and D. Reiter
Transport of Neutrals in Scrape-Off Layer Plasmas: Autoregressive Beta Process to Describe Plasma Density and Temperature Fluctuations
- Page **450–454** — M. Toma, X. Bonnin, K. Hoshino, A. Hatayama, R. Schneider, and D. Coster
Development of Coupled IMPGYRO-SOLPS Codes for Analyzing Tokamak Plasmas with Tungsten Impurities
- Page **455–459** — M. Koubiti, T. Nakano, H. Capes, Y. Marandet, A. Mekkaoui, L. Mouret, J. Rosato, and R. Stamm
Characterization of the JT-60U Divertor Plasma Region During the Formation of a Strong Radiation
- Page **460–464** — Yu.L. Igitkhanov
The Effect of Non-Coulomb Scattering of Relativistic Electrons on the Generation of Runaways in Multicomponent Plasma

5 PLASMA-WALL INTERACTIONS AND DUST PARTICLES

- Page **465–477** — A. Yu. Pigarov, P. Krstic, S.I. Krasheninnikov, R. Doerner, and T.D. Rognlien
Dynamic Models for Plasma-Wall Interactions
- Page **478–483** — M. Ueno, N. Ohno, Y. Tomita, and G. Kawamura
Conditions for the Release of a Metallic Dust Particle from a Plasma-Facing Wall
- Page **484–489** — Y. Tomita, G. Kawamura, M. Ueno, N. Ohno, Z.H. Huang, Y.D. Pan, and L.W. Yan
Electric Field at a Plasma-Facing Wall for a Two-Temperature Electron Distribution

6 SOL AND PARALLEL PLASMA KINETICS MODELS AND SIMULATIONS

- Page **490–499** — D. Tskhakaya
On Recent Massively Parallelized PIC Simulations of the SOL
- Page **500–504** — A.V. Chankin, D.P. Coster, and G. Meisl
Development and Benchmarking of a New Kinetic Code for Plasma Periphery (KIPP)

- Page **505–511** ——— Y. Homma and A. Hatayama
Test Simulations of the Kinetic Model for the Thermal Force based
on the Monte Carlo Binary Collision Model
- Page **512–517** ——— S. Azuma, A. Fukuyama, and T. Takizuka
Analysis of the Bohm Criterion for Two-Ion-Species Plasmas Using
PARASOL
- Page **518–522** ——— M.A. Dorf, R.H. Cohen, J.C. Compton, M. Dorr, T.D. Rognlien, J. Angus, S.
Krasheninnikov, P. Colella, D. Martin, and P. McCorquodale
Progress with the COGENT Edge Kinetic Code: Collision Operator
Options
- Page **523–528** ——— Z. Guo and X.-Z. Tang
Heat Flux Dependence of Ambipolar Potential and Plasma Profile in
a Long Mean-Free-Path Plasma Along Non-Uniform Open Magnetic
Field Lines
- Page **529–533** ——— R.H. Cohen, M. Dorf, and M. Dorr
Reduced Electron Models for Edge Simulation
- Page **534–538** ——— A. Froese, T. Takizuka, and M. Yagi
PIC Simulation Study of Heat Transport Kinetic Factors in
Scrape-Off Layer Plasmas

7 DIVERTOR MODELS

- Page **539–543** ——— D.D. Ryutov, R.H. Cohen, T.D. Rognlien, and M.V. Umansky
Plasma Convection Near the Magnetic Null of a Snowflake Divertor
During an ELM Event
- Page **544–549** ——— W. Dekeyser, D. Reiter, and M. Baelmans
Divertor Design through Shape Optimization
- Page **550–554** ——— K. Hoshino, K. Shimizu, N. Asakura, T. Takizuka, M. Nakamura, and K. Tobita
Simulation Study of an Extended Divertor Leg for Heat Control in
the SlimCS DEMO Reactor
