Abstra	Abstract					
Execu	ive Summary	15				
1. In	1. Introduction					
1.	Definition of Microdosimetry	20				
1.	History	21				
1.	This Report	21				
2. In	teractions of Radiation With Matter	23				
2.	Indirectly Ionizing Radiations	23				
	2.1.1 Photons	23				
	2.1.2 Neutrons	23				
2.3	Directly Ionizing Radiations	24				
	2.2.1 Electrons	24				
	2.2.2 Protons and Ions	25				
	2.2.3 Modeling Electromagnetic Particle Cross-sections in Condensed-Phase Media	25				
2.	Track Structure	27				
3. St	ochastic Variables and Distributions	29				
3.	Continuous and Discrete Random Variables	29				
3.	Energy Imparted (ε)	30				
3.	Derived Continuous Stochastic Quantities	30				
	3.3.1 Specific Energy, $f(z)$ and $f(z,D)$	30				
	3.3.2 Single-Event Frequency-Mean-Specific Energy, \overline{z}_{1F}	31				
	3.3.3 Single-Event Dose Mean Specific Energy, \overline{z}_{1D}	31				
	3.3.4 Lineal Energy, y	31				
3.	Relationship Between Microdosimetry and Macroscopic Quantities	31				
	3.4.1 z and Absorbed Dose	31				
	3.4.2 y and LET	32				
	3.4.3 Measurement of Microdosimetric Parameters y and z	33				
3.	Ionization Number in Defined Sites	33				
3.	Radial Distribution of Absorbed Dose	34				
3.'	Presentation of Data	34				
	3.7.1 Frequency Distributions	35				
	3.7.2 Absorbed-Dose Distributions	36				
	3.7.3 Semi-Log Plots and Normalization	36				
	3.7.4 Resolution	37				
4. N	mber of Ionizations and Energy Deposition in Sites	38				
4.	Sites Within a Uniform Medium	38				
	4.1.1 Distribution of Sites Relative to Tracks	38				
	4.1.2 Path Length Effects	38				
	4.1.3 Stopping Power Effects	39				
	4.1.4 Delta Ray Effects	39				
	4.1.5 Particle Range	39				
	4.1.6 Statistics of Rare Events	40				

6

|--|

	4.2	Energy Deposition in Sites Within a Nonuniform Medium	41
		4.2.1 Wall Effect Due to Changes in Density	41
		4.2.2 Wall Effect Due to Changes in Atomic Composition	42
5	Man	to Carlo Simulations for Microdosimetry	44
э.	NION	te Carlo Simulations for Microdosimetry	44
	5.1	Monte Carlo Method in Radiation Physics	44
	5.2	Core Concepts of Radiation Transport	45
	53	Fundamental Concents of Particle Interactions Modeling	46
	5.5 5 A	Condensed History Approach and Treak Structure Monte Carlo Simulations	47
	5.5	Trook Structure Monte Corle Simulations	47
	5.5	Frack Structure Monte Carlo Simulations	4/
		5.5.1 Track Structure	48
		5.5.2 Validation of Track Structure Monte Carlo Codes	48
	5.6	Monte Carlo Condensed History Approach	49
	5.7	Acceleration of Monte Carlo Simulations for Microdosimetric Calculations	51
	5.8	Monte Carlo Simulations for Microdosimetry: Final Observations	52
	5.9	Analytical Function	54
,			- /
6.	Meas	surement of Ionization or Energy Deposition in Defined Sites	56
	6.1	Motivation for Experimental Measurements	56
		6.1.1 Validation of Simulations	56
		617 Characterization of Unknown Dadiation Fields	56
		6.1.2 Characterizing Dediction Quality	50
	()	Considerations for Detector Design	5/ 50
	0.2		58
		6.2.1 Chord Length Distributions	58
		6.2.2 Effect of Site Size on Signal-to-Noise Ratio	59
		6.2.3 Effect of Nonuniform Gain	60
		6.2.4 Conversion Between Atomic Compositions	60
		6.2.5 Impact of Wall Thickness	61
		6.2.6 Impact of Wall Effect	61
		6.2.7 Data Acquisition	61
_	a		
7.	Gas-	Filled Detectors	65
	7.1	Function of Gas-Filled Detectors	65
		7.1.1 Gas Multiplication in Proportional Counters	65
		712 Experimental Simulation of Small Sites	66
	7 7	Characteristics of Cas Filled Detectors	67
	1.4	721 Count Date Versus Detector Size	07
		7.2.1 Could Rate versus Detector Size	0/
	= >	7.2.2 Pulse Height Resolution.	67
	7.3	wire Anode Detectors	68
	7 .4	Other Gas Detectors.	70
		7.4.1 GEM-Based Detectors	70
		7.4.2 Avalanche Confinement Proportional Counter	71
	7.5	Nanodosimeters	72
		7.5.1 Jet Counter	73
		7.5.2 Ion Counter	74
		7.5.3 Startrack Counter	75
	7.6	Derivation of Dosimetry Quantities	76
	7.7	Calibration of Gaseous Detectors	78
		7.1 Methods for Single-Event Calibration	70
		7711 Alpha source calibration	70
		7.7.1.1 A spin source can be a subscription of the state	19
		7.7.1.2 Internous associated with common features of the y $a(y)$ weighted dose distribution	/9
		7.7.1.5 Internods associated with the direct deposit of known quanta of	
		energy in the TEPC-sensitive volume	79

	7.	.2 Calibration Using a Known Value of Absorbed Dose	80
	7.	.3 Calibration When Using the Variance Method 8	81
	7.	.4 Uncertainties Due to Calibration 8	81
8. 9	Solid-S	ate Detectors	82
8	8.1 General Properties of Solid-State Detectors		
	8.	.1 Silicon Detectors	82
	8.	.2 Diamond Detector	83
	8.	.3 Radiation Damage of Semiconductor Detectors	84
1	8.2 D	tectors Measuring y and z	85
	8.	.1 Development of Silicon Microdosimetry	85
	8.	.2 SOI Microdosimetry	86
	8.	.3 ΔE-E Silicon Microdosimetry	89
8	8.3 A	plications Evaluating Particle Radiance	90
1	8.4 D	rivation of Microdosimetric Quantities	92
	8.	.1 Lineal Energy in Particle Beams	92
	8.	.2 Tissue Equivalence	94
	8.	.3 Matching Energy Deposition Spectra	94
	8.	.4 Ratio of Stopping Power	94
1	8.5 C	nsiderations When Characterizing Particle Beams	95
	8.	.1 Energy Acquisition Range	95
	8.	.2 Volume Size	96
	8.	.3 Sensitive Volume Shape	96
1	8.6 D	rivation of Dosimetry Quantities From Timepix Data	97
